Librarians confirm the inferences as to the change in popular taste suggested by the lists of new books. Beyond question there is more serious reading done in this country than before the war. Frivolous works are not discarded, and there is no reason why they should be, but there are more frequent calls for books on history, geography, and international relations. Of course many patrons of the public library, who under stimulus of the war mustered up courage to call for a history, have had their curiosity fully satisfied by a single volume and have never drawn another. The thirst for "war-books," any kind of war-books, manifested in the fall of 1914, was quickly slaked, and the publishers who in those days bought up everything of the sort they could get hold of, now wish they had the white paper instead of the remainders in their storehouses.

Many of these war-books deserved no better fate than to be overwhelmed by the flood of later ephemerals. But among them are many important works of history and international politics that never would have been written or found readers except for the war. There is also a marked increase in the demand for information about the West Indies, Central and South America, and China, especially in regard to trade opportunities. The same impulse shows itself in the desire for Spanish lessons. Classes in Spanish have quadrupled in some of our schools and colleges, and a few are giving Portuguese. There is unprecedented demand for books on business methods and applied science.

## MORE POETRY

THESE changes in public taste may be accounted for on mercenary motives. Not so the astonishing interest taken in poetry and drama. This is a world-wide movement, stronger in Europe than here. But in Europe it is simply the lyrical expression of an exalted patriotism. In Germany the output of poetry is said to be many times what it was formerly. In England and France both new and old verse is more read than ever. The lyrics are sufficiently genuine to enable us to detect changes in national feelings. Lissauer has apologized for his *Hassgesang* against England, for which he was decorated by the Kaiser. Marthold, let us hope, is ashamed of his *Chant de Haine* against Germany. English temper, on the contrary, seems to be slowly rising toward the boiling point. It looks as tho John Bull would begin to get

"fighting mad" about the time Germany became cool and rational.

In this country we have not felt this emotional glow, and our revived interest in poetry is more the appreciation of the dilettante than the need for an outlet for overcharged feelings. We are still in the *fin de siècle* stage; more concerned with form than message, with the trying of new tricks in meter and typography. Now whether we shall have *vers libre* or *vers enchainé* does not matter much. The only essential thing for live poetry is that it shall mean something, that it shall be a fitting expression of real feeling. A great literature is that inspired by a great purpose.

In British fiction, too, there is evident a heightened tone that is lacking in the American. Not having shared in the dangers and sufferings of Europe, we miss the blessing that comes with such trials when nobly borne, the spirit of heroism and self-sacrifice, the deeper insight into the fundamental verities of life. The transformation which has come over the British temperament is described with marvelous skill by H. G. Wells in his latest novel, "Mr. Britling Sees It Through." Tho doubtless all written since the war began, the first half of the book reflects the unperturbed and settled life of the ante-bellum period and the latter half deals with the successive phases of emotion aroused by the war. In the final chapter, where Mr. Britling, who has lost his eldest son, attempts to write a letter to the parents of a young German who had been a member of his family and had also fallen in the war, the reader is brought face to face with the deepest problems of theology and the meaning of life. These are pages that for fineness of

feeling and thoro thinking are not to be matched from any of Mr. Wells's voluminous writings hitherto.

A similar change of mood with increase of power is apparent in Hugh Walpole if we compare "The Gods and Mr. Perrin," published before the war, with his latest novel, "The Dark Forest." Both deal with the same problem, the psychology of forced intimacy. In "Mr. Perrin" we have a semi-satirical, highly humorous story of the isolated, monastic life of the English public school, where the masters, compelled to live together, rub up against one another and get on each other's nerves until the festering feud breaks out into a fight. In "The Dark Forest" we have a group of nurses and doctors in the Russian Red Cross who, in spite of their self-sacrificing work are subjected to the same irritation due to the constant commingling of incompatible temperaments. They are no less liable to human frailties than the English schoolmasters, but the book is written in a nobler style, and with a deeper sympathy. It does not omit the horrors and ugliness of hospital work, the flies and the smells and the blood, but it is not treated in the manner of the decadent realists. These carrion crows of literature have flown from Europe, but are still to be found in America. Such instances of the changed spirit of European literature might be multiplied indefinitely.

In spite of our sympathy for sufferings of the belligerent nations and our very real and deep distress at the calamity that has befallen Europe, it is impossible for us to be affected as strongly as those who are fighting for life, and so the war has not had the same influence upon American literature. The most con-

spicuous effect here is the heightening of our national self-consciousness. There is noticeable a revival of militaristic patriotism and a renewal of emphasis upon those principles and ideals that divide America from Europe.

#### THE GLADIOLA BOOKS

THERE is also manifest as a reaction from the long strain upon our sympathies a disposition to ignore not only the war but whatever else is repugnant in life. This feeling has given rise to an ostrich-literature of astonishing extent and variety. The movement in its best forms may be what William James called it, "the religion of healthy-mindedness"; in its worst forms it is hardly more than a callous hedonism. A single Mark Tapley is a blessing to the community, but when everybody tries to look on the bright side of things all at once, there is apt to be a jam and toes get stepped on. Some one has defined a pessimist as "one who has been living in the society of optimists." It is to be feared that an overdose of the gladiola books will plunge us later into Schopenhauerian gloom. If we do too much whistling to keep our courage up we are likely to get down in the mouth.

War is not history. It is an interruption to history. Old Time with the sithe comes to the front of the stage and announces "an intermission of a few years while the scenes are being shifted." Then all is darkness and we hear the rumble and crash of falling buildings. Finally the dread wait is over, the lights are turned up and we breathe freely once more. What scene we will find set when we see again and what act will be rehearsed we cannot tell. But scraps of paper show which way the wind blows.

## GÖTTERDÄMMERUNG BEFORE VERDUN

BY MORRIS GILBERT

A war-gaunt shape with bitter care  
Leans to his task, and waits until,  
Some twilight, 'neath the shrapnel flare  
Release may work its dreary will . . .  
Who is it standing, massive, still,  
Submissive to a madman's word?  
*What Beethoven on Dead Man's Hill*  
*Bows o'er a misty clavichord?*

As twilight creeps the shadows creep  
To trenches where death never dies.  
That youth who sleeps a deathly sleep  
Looked up wide-eyed,—with Heine's eyes!  
There, sorrowful, in rapt surmise  
What wasted Goethe bends his head?  
*What child hearts break where some Grimm lies,*  
*Wondering that the thorn-rose bled?*

O frantic Prussian, you have flung  
Doom's torch to bring a sorry day.  
No shrapnel-tuft ablaze among  
The murk can ever light the way  
That shone of old—the swift fine play  
Of thought and art and industry . . .  
*When Youth, flame-crowned, expired today*  
*You stabbed the heart of Germany!*

# WE WANT HUGHES: WHY?

BY JACOB GOULD SCHURMAN

**W**E want Hughes: to maintain the rights guaranteed by international law to nations that live at peace. Insistence on neutral rights and enlargement of their range and application have been the great contribution made by the United States to the law of nations. But never since the Republic came into existence have our neutrality rights been so ruthlessly, so generally, and so persistently violated as they have been during the present war; and seldom, if ever, has an administration been so weak and ineffective in defending those rights as the Wilson administration.

## NATIONAL SAFETY

We want Hughes: to protect the honor and safety of the country. This is not a matter of adroit party leadership or "masterful control" of legislation, which the supporters of President Wilson celebrate among his preëminent achievements. The maintenance of the national safety and honor calls for far-seeing and sagacious statesmanship and high administrative efficiency. This administration has been signally lacking both in foresight to anticipate issues and in prompt and resolute handling of them when they became visible to everybody. Shall we entrust for another term of four years the honor and safety of the nation to Mr. Wilson and the men he appoints to assist him—Mr. Bryan, Mr. Daniels, Mr. McAdoo and their associates in the administration both at home and abroad? Or shall we recall the Republican party to power under the true and tried leadership of the man who as governor gave to New York State one of the most efficient administrations in her history?

THE WILSON NATIONAL GUARD

We want Hughes: to represent America to the warring nations of the world. Americans love peace; but

they do not want a leader who, when their recognized rights are trampled under foot, proclaims that we are "too proud to fight." Americans want

Illustrations drawn for The Independent by W. C. Morris

WE POINT WITH PRIDE

peace with honor, not peace with dishonor. The former is secured by prompt, firm insistence on our rights; the latter is the result of procrastination, vacillation, and surrender.

They boast they have kept us out of war. But weakness and irresolution are no protection against war. And the use of strong and menacing language in the conduct of our negotiations with other governments which is not made good by performance is a direct invitation to war. But what nation has wanted to fight with us? All the great nations of the world except America are fighting for their lives and the last thing any of them would do is to add America to its list of enemies. On the other hand Mr. Wilson's Mexican policy has involved sending our naval vessels and a considerable part of our regular army into Mexico, where the latter remains, and also the assemblage at the present time on the border of the largest military force we have ever gathered together since the Civil War. And the Judge Advocate General of the Army has just officially decided that we are in a state of war with Mexico.

Mr. Hughes is a man of peace. But he is also a man of recognized sincerity, stability, and firmness of purpose.

## PROTECTION OF AMERICAN CITIZENS

We want Hughes: to protect American citizens abroad. The Democratic platform four years ago declared that the rights of American citizens followed them thruout the world and they should be protected in both their lives and property. But American citizens abroad have not been protected by this administration: on the contrary they have been murdered on land and sea and their government at Washington has done nothing to protect them. When in all American history has American citizenship meant so little as it does today? Hundreds of innocent American

men, women and children have, in violation of the dictates of humanity and the law of nations, been sent to watery graves in the Atlantic. And hundreds more equally innocent have been foully murdered in Mexico, where the citizenship of Englishmen, Germans and Japanese has secured them practically complete protection. We want Hughes in the presidency that American citizenship may once more become a panoply of protection to every individual who possesses it—never a mere mark for the shaft of the foreign assassin.

What guarantee have we that Mr. Hughes, if elected President, would protect the honor of America, secure her safety, and enforce thruout the world the rights of American citizens? First, his record as governor of New York proves that he is a man who matches words and promises with deeds and performances. Secondly, here is what he is saying

Merria

DEAF TO AMERICAN RIGHTS

in his speeches thruout the country, as I recently heard him state it to an audience of over 10,000 persons in Buffalo:

I repeat in broad statement this: That we stand for the enforcement of all American rights on land and sea with respect to all nations and with regard to American lives, American property and American commerce. We have no secret understanding, we have no unstated purposes, we have no intrigues. We simply intend that American rights shall be maintained.

## POST-BELLUM DANGERS

We want Hughes: to meet the dangers that will come to us after the European war is over. These may arise in consequence of a challenge of the Monroe Doctrine, or of aggressive policies in Mexico, or of trade rivalries, or of other causes that cannot be foreseen. That will be the time to stand for American rights. President Wilson is devoted to high ideals for what he believes to be the service

of humanity, but he has shown an inadequate conception of American rights. We all hope the Mexicans may achieve their liberty. But it is a new and alarming doctrine that the President of the United States in pursuing a policy of interference with the domestic concerns of a foreign country, should deliberately sacrifice American lives and properties to his ideas of what constituted a free government for that country.

#### PROTECTION OF AMERICAN INDUSTRY

We want Hughes: to protect American industries and the American standard of living. Everything points to an absolutely new situation with respect to international trade at the end of the war. It may be that the great nations of Europe will enter upon a period of economic warfare involving the use of offensive and defensive economic alliances. Such a thing is certainly within the bounds of possibility, and we should be prepared to meet it; and it is very certain that we are to have new alignments of national interests, new customs boundaries, and new tariffs. We must be very sure that the United States will be fittingly prepared to meet a situation of this kind by prompt, decisive, constructive measures of its own. We shall very probably want to be able to use as a weapon the principles of the "maximum and minimum tariff" which the Democrats threw out in 1913. We shall want to be able to meet discrimination against American products by retaliation in kind when that procedure is wise.

It is especially desirable that we should have the assistance of an expert tariff board. Such a board would be necessary in the administration of a maximum and minimum tariff, and it would be almost indispensable in investigating the conditions which will make new tariff legislation necessary. Despite the fact that the Democrats have taken a leaf from the Republican book by recommending such a board, we can have no confidence that they are willing really to put the thing thru. Moreover, recent appointments—those, for example, on the Federal Trade Commission—have not been such as to justify us in expecting that Mr. Wilson, if re-elected, would be willing to select and appoint competent experts for such positions.

How, indeed, is it

possible for the Democratic party to make a protective tariff? If the American people wanted a tariff for revenue only they might ask the Democratic party to make it. But that party does not believe in a protective tariff, and they could not either in honesty to themselves or justice to the subject undertake to frame one.

What is Mr. Hughes's position? He has been telling the American people everywhere that he is in favor of protection. He recognizes the new economic conditions that will arise after the war. He sees millions of men now in the trenches returning to productive industry, practising the efficiency and economy learned in the school of war, and producing at low wages commodities whose cheapness will menace the markets of America and endanger the standard of living of American working men. Mr. Hughes believes in protection to American laborers and American industries. But he is not blind to the dangers associated with tariff legislation:

I do not propose that we shall have tariff abuses. I have not left the career I desired to continue and returned to political activity on a summons I could not honorably refuse in order to parcel out special privileges at the expense of the public welfare. This matter must be studied. It must be done as carefully and as scientifically as possible. I believe in a tariff commission. I want facts. We want more of expert aid in this country in the discharge of public business.

We want all the aid we can get from a careful tariff commission, but tariff commissions do not legislate. It is Congress that legislates. The sum of the matter is this: If you want protection to American industry, the protection of the American wage scale, then put in power those who believe in the protective principle, not those who do not believe in it.

#### ORGANIZATION OF PEACE

We want Hughes: to be the voice and will of America in a world-conference at the close of the war. We

want the law of nations re-asserted and re-vindicated, and those neutral rights, which America has always befriended and championed, once more put upon a solid foundation. We believe that peace is the hope and highest destiny of the civilized world. To assure the permanent maintenance of peace is the chief task of constructive statesmanship for this and later generations. The horrors of the present situation have robbed war of all its glamor and all its illusions; and it is saddling future generations with a crushing load of debt which will indefinitely postpone that amelioration of social and economic conditions to which the progressive spirit of the age had so hopefully address itself. To prevent war altogether, or so far as humanly practicable, is the problem of problems for civilized mankind. And, as Mr. Hughes has well said, "the peace of the world is our interest as well as the interest of others." The first essential in international reorganization is a world-court, and for this world-court there is probably no better model in existence than the Supreme Court of the United States. The second essential is a world-parliament, or conference of the nations, as Mr. Hughes has put it, "to formulate international rules, to establish principles, to modify and extend international law so as to adapt it to new conditions." Instrumentalities of conciliation and arbitration would also need to be developed. The reform is nothing less than a new international organization dedicated to the task of preventing war.

America will do her full duty in this great and beneficent undertaking. There is no incompatibility between a firm insistence on her own national rights and devotion to the ideals of peace, disarmament, arbitration, and a tribunal of international justice for herself and for the world. Mr. Hughes's firm insistence

on American rights, his experience as chief executive of the Empire State, his administration of international law in the Supreme Court of the United States, combined with his high character, great ability, and tested statesmanship, preëminently qualify him to speak and act for America in the coming world-conference.

We want Hughes: to be the next President of the United States.

## WHAT HUGHES WOULD DO

*"You ask what road I propose to travel. These are the principles which mark it—an Executive responsible to the whole nation; a Cabinet chosen from our ablest men; a foreign policy that stands courteously but firmly and consistently for American rights; a flag that protects the American citizen in his lawful rights wherever his legitimate business may take him; a preparation for trade competition which shall protect all groups of American workmen; a government supervision of business, which, while preventing abuses, will act on the assumption that the average business man is honest, and, finally, a domestic policy which looks to industrial peace and coöperation, not to industrial war."*

# WILSON TESTED, HUGHES DANGEROUS

BY NORMAN HAPGOOD

**W**AS Lincoln showing his customary intelligence when he warned against changing horses in the middle of a stream? We are at peace in the middle of a world-war. We are prosperous, with a prosperity that is diffused thru all classes and safeguarded by constructive legislation. Is this, of all times, the moment to experiment?

And what an experiment! Mr. Hughes, to hold his motley followers together—Progressives and Old Guard, Jingoists and Susan B. specialists, consolidated wealth and Germany-first fanatics—has been compelled to talk wishy-washy emptiness. We can guess little of his intentions, but the ideas which Mr. Hughes has come nearest to making articulate are these:

## INTERVENTION IN MEXICO

1. He would intervene in Mexico, to protect American dollars, at whatever cost to Mexican aspirations, to

HE WOULD GO AFTER ENGLAND WITH SOME KIND OF A BIG STICK, NOT PRECISELY MENTIONED

American ideals, and to Latin-American confidence.

2. He would go after England with some kind of a big stick, not precisely mentioned. As the German *Herold*, of New York, puts it: "Of all the declarations which the Republican candidate has thus far made, that of Monday in Philadelphia is by far the most important. In the Quaker City Mr. Hughes touched on the interference of England with American business. He did not actually mention England by name, but his words left no room for doubt about his meaning."

## THE GERMANY-FIRST VOTE

The same paper says:

"Every citizen of German origin should cast his vote for Hughes."

Will R. MacDonald, one of the most conspicuous organizers of the campaign against the President among citizens with foreign preju-

*Summing up the arguments for Both Sides of the Presidential Campaign, the spokesmen for Republicans and Democrats, Jacob Gould Schurman and Norman Hapgood, point out the principal reasons for electing Mr. Hughes or for re-electing President Wilson. A survey of the series of articles which they have written for the Independent—published every other week, beginning with the first issue in August—presents fully and impartially the various phases of the presidential campaign and the popular arguments which are advanced for both parties.—THE EDITOR.*

dices, after the Philadelphia speech said:

This speech by Mr. Hughes was perfectly satisfactory to all our leaders in the East, North, West and South. His speech should satisfy every one that in this election we will secure the services of a real American President and from this time on it is to be understood that organization leaders will instruct all of their section leaders and others to do all that is possible to bring about the election of Mr. Hughes.

The *Staats-Zeitung* said:

German-Americans, who as citizens of the United States were received by Mr. Hughes, to whom he as an American declared that the interests of America stand before all others, are thereby firmly convinced that Charles E. Hughes is worthy of the confidence of all American citizens and that his election to the Presidency of the United States will be a blessing.

Nobody, except certain big financial interests, is working so hard for Hughes as these Germany-first people are. They believe that they nominated him. They believe that his declaration about England was in response to their pressure. They know that if he is elected it can only be thru their votes. It is a strange thing, this mobilizing of the German-Americans against Wilson. The big, outstanding fact is that by patience he made a settlement with Germany,

Wall St The Hyphen Jingo Press The Susan B.

CLOSE HARMONY

Illustrations drawn for The Independent by W. C. Morris  
LINCOLN WAS RIGHT

in place of war. As to Hughes, with the influences behind him, an accident might very well push him into war, with either Germany or England.

So with the Irish. There is some defection among them, no doubt, yet they of all men ought to be for the President who is for the under dog. The Mexican internal troubles are exactly like the historical Irish landlord blight.

Among 16,000,000 people the land belongs to 600,000. Wilson has shown sympathy with the 16,000,000—that is the substance of the Mexican policy.

## OUR FOREIGN RELATIONS

What would our foreign relations be like from November 8 to March 4 if Hughes were elected? What would they be like after March 4?

3. He would have recommended our bankers to take part in the six-power loan in China, with our army and our navy pledged to this investment.

4. He has no ideas about the great submarine settlement, except that he would have gone to war with Germany if the "Lusitania" had gone down after the warning with which he imagines he would have met the newspaper advertisement.

5. He would help to upset the present tariff. He thinks no prosperity is sound that is not based on a Hanna tariff. Senator Gallinger says that the Payne-Aldrich act was too much of a concession to reformers, and that the Republican party will go back to the Dingley act.

## MERELY INFERENCE

These are the only matters of importance on which Mr. Hughes has spoken so that I can understand. By inference it is possible to reach his views on other subjects. He telegraphed Everett Colby to persuade his infant son to be a regular Republican instead of a Progressive Republican. He ignored Johnson in California. He has talked Old Guard doc-

trine on every economic question. His conduct has driven Progressives like John M. Parker, Bainbridge Colby, Matthew Hale, Victor Murdock, Herbert Croly, Walter Lippmann, Rev. Percy Grant, Miss Jane Addams, Miss Mary McDowell, Miss Lillian Wald, to support the President, as well as Republicans of similar intellectual standing, Rev. Washington Gladden being added to the list since my last article was written. Also socialists of the type of English Walling and Ernest Poole.

Hughes is backed with the utmost enthusiasm by concentrated, specially privileged wealth. There is every reason to surmise, therefore, that he would sign a bill repealing the Federal Reserve Act and substituting Senator Aldrich's proposal still further to strengthen the money trust. The same interests are opposed to the income tax, and presumably Mr. Hughes would sign a bill for its repeal. They are opposed to the clauses of the Clayton act which have done justice at last to labor. For a long time there has been kept alive in labor the belief that the courts were an instrument of privilege.

If Mr. Hughes should sign a bill taking away this fairness, tardily granted to labor, the trend toward industrial justice, and with it industrial harmony, would be unhappily checked.

#### THE EIGHT-HOUR LAW

And so with the eight-hour principle. Whenever labor gains anything the conservatives become most ingenious in discovering reasons for being shocked. If they cannot view with alarm the thing itself, they can be equally discontented over the method of its accomplishment. The unions made no demands of the President or Congress. They were ready to use their constitutional right of striking.

It was the country at large that asked the President to stop a great calamity that would have tied up industry, brought suffering and poverty everywhere, starved babies, and

increased inter-class bitterness. So clear was this demand that 74 Republicans voted for the settlement in the House, the Republicans in the Senate did not use their privilege of debating, and Mr. Hughes never opened his mouth until the law was signed.

The President could not get his whole program thru at once. He desired a penalty for overtime, thus making it more necessary for the railroads actually to initiate the eight-hour plan. It would require only a little extra efficiency on their part, not nearly as much as they have put into effect since Mr. Brandeis made his \$1,000,000 a day estimate. The basis of a day's work is in miles, not directly in hours. It is 100 miles a day for freight. This distance now takes, on the average, ten hours. Make it take eight hours and the saving will be sufficient to meet the eight-hour demand. The railroad managers, more especially the banks, preferred a tie-up to a settlement, because they believed that after the distress of a few days, by granting the eight-hour day, they could receive in return the right to raise rates without investigation.

#### THE GIST OF THE CONTROVERSY

Such is the simple gist of this controversy. That Mr. Wilson means to complete his program, preventing such situations in the future, everybody knows. Shall we go back to the reactionaries to help us solve these complex modern industrial problems, when the United States is already in that respect at least a generation behind the best thought of European countries?

Hughes, then, would bring danger to peace, to good-will among nations, to American solidarity. He would have the Germans and the predatory interests as his expectant friends. He would be definitely committed to the Tory side in regard to industrial questions.

#### WHERE WILSON STANDS

And Wilson, what of him? Could there, my friends, be a greater contrast? The one carps at our much-

tried President. He offers nothing. He marches at the head of an army whose legions are captained by Smoot, Perkins and the *Staats-Zeitung*, whose watchwords are dissension and distrust. The other, after three and a half years in your service, stands tested by sudden and violent emergencies, with his record in his hands.

His is a list resplendent with domestic achievement, with promises fulfilled. It pictures a series of foreign perils safely and honorably surmounted. Truly, Lincoln's judgment was scarcely put to a more drastic trial. Only Washington had a more gigantic onslaught of circumstance to meet and solve. Beyond those two there is no President into whose term has been crowded such a volume of perplexity and triumph. For my part, I have been a student of American history; I belong to no party; I voted in 1914 for four Republicans, three Democrats, and two Socialists; and, with the verdict of the United States about to be rendered, I am firm in the conviction that Wilson's presidency has given more to his people than the presidency of any man except the immortal two. To fail in appreciation on November 7 would be to present to Europe a confused, divided front. It would mean rash experiment in the midst of storm. It would discourage orderly progress and bring us back to the conflicts of Hanna's day.

If the hundred million voters are predominantly brave, as I believe they are, and appreciative of service; if their faces are turned, not timidly back over their shoulders, but happily forward; then will they speak in a clear, strong voice on November 7. Then will they answer petty criticisms against our President, whether those criticisms are hurled by Germany or England, by selfish wealth or internal disloyalty, by dull partizanship or the thwarted strife for office.

This is a critical autumn for America, and the issue is clear; loyalty to her leader is loyalty to herself.

## ELIOT TO WILSON

BY PERCY MACKAYE

Harvard, by that old man emeritus  
Now in his noblest prime, virile, unbent  
Young Harvard, by her one-time President  
To Princeton's, now the nation's, speaks for us  
Our challenge to the moment perilous  
That holds the world: clear-lens'd and eloquent,  
His vision questions of the vast event  
And bids us choose: shall it be thus—or thus?

Seldom great scholars are great citizens:  
When there are two, whose doctorate degrees  
Flash fire with faith in young democracies,  
Their country kindles to their common sense  
And claims them proudly: so, when men like these  
Clasp hands, America has found defense.

# PANTOMIME: AN ART REBORN

BY MONTROSE J. MOSES

AUTHOR OF "THE AMERICAN DRAMATISTS"

HERE has just come to this country from abroad an old form of entertainment—about the oldest there is in the history of the theater. It is a pantomime, "Pierrot the Prodigal," with the hero our time-honored Pierrot, and with the heroine, Columbine, masking under the guise of a little French laundress, Phrynette.

In the history of pantomime we have to look to Italy as the source from which sprang the entire Harlequinade family. Both France and England, in literature and in the theater, transplanted "cuttings" from the parent stem. And so we find the French Pierrot and the English clown to be first cousins, however different in temperament. The blood which flows thru them is drawn from the *Comedia del' Arte*—the Italian form of comedy, recalled to us by this modern prototype now playing in New York—"Pierrot the Prodigal." It was brought from Paris by Mr. Winthrop Ames, who always brings things worth while for our pleasure.

Operagoers in "Pagliacci," theatergoers in Barrie's "Pantaloen" and Barker's "Prunella" have seen the traditional characters of pantomime, but only as they appear in the spoken drama. Reinhardt's oriental orgy, "Sumurun," gave us the wordless play, but the Harlequin family had nothing to do with the plot. In America, we have witnessed during the past years interpretative dancing—beginning with Isadora Duncan, Pavlowa, Genée, and culminating with the Ballet Russe—where mood and action have interpreted music; just as in the highest forms of music, music has interpreted action and mood, whether spiritual or physical. Everywhere around us we have been given those elements in our playhouse which, if they had been acknowledged and concentrated by our actors as an art in itself, would have resulted in a renaissance of pantomime both here and in England.

Some time ago, when the moving picture, as a wordless form of entertainment, began to com-

pete with the spoken drama in the theater, we said: "However much we deplore the competition, it will at least do this for the stage—it will afford the actor a better opportunity than ever before to perfect himself in his mimetic powers, which have sadly gone astray. It will make him surer, more clear-cut, more interpretative—both in facial expression and in manner." But nothing of the kind has resulted. The moving picture play holds thru no forceful mimetic ability on the part of the individual actor, but thru nervous excitation of narrative interest, created by constant change of scene, in which the actor simply figures as one of the accessories.

Thruout the entire production of "Pierrot the Prodigal" the comparison of moving picture and pantomime kept recurring to our mind. Here was a moving picture play, a continuous flow of action, telling a story by means of its most significant scenes. Without words, actors were employed—just as in the celluloid drama. But there was this difference: the delicate shades of action, the almost imperceptible flickers of expression which often, in legitimate acting, constitute the hair-line between laughter and tears, the kinetic

element which is the heart of moving picture action, were missing. After pondering a little over the difference, one came to realize that pantomime, such as we had years ago,—and "Pierrot the Prodigal" is its prototype—is not so much *kinetic* as it is *mimetic*.

In the history of the theater, the tradition is that pantomime in England flourished around 1724, because of the fact that one John Rich, an actor, not being endowed with a far-reaching or expressive voice, possessed the exceptional ability of telling a story by "miming" it. His success in so doing called down upon him the wrath of no less a person than David Garrick. For Garrick was against what he considered to be an illegitimate form of entertainment; he was against pantomime as an end in itself, and not against the ability to imitate, by which an actor thru gesture or pose, conveys a mood, thought or command.

Now, pantomime is an exceptional form of drama; it is a deviation from the normal idea of what a play is. Perhaps we should say that the play is a deviation from it, inasmuch as pantomime is of an earlier growth. Nothing can take away from the fact that pantomime is the heart and soul

of acting. It is the foundation on which every big actor stands, and it is the unexpected rock on which every small actor falls. One night, while Junius Brutus Booth was playing *Sir Giles Overreach*, an actor playing opposite him forgot his lines while watching spellbound the terror in Booth's eyes. Much of the critical comment on actors of the past stresses their ability to convey emotion and story by means of pantomime. But today, the theater has discounted this fundamental art; most of our actors no longer have ability to imitate an emotion without speaking at the same time. And yet nearly all of them have had a taste of photo-acting.

The moving picture has failed to take a permanent place in the drama as a useful agent in the training of actors just because it has failed to develop its pantomimic side.

White Studio

PIERROT WOOS PHRYNETTE

"Pierrot the Prodigal" could not be played by American actors, because they have no training in the art of pantomime. There should be more of it on our stage. As an art it does not exist for the American actor. There are but three or four players in New York today who have the ability, and they are representatives of another generation.

In Mr. Ames's company there are two newcomers in pantomime—both English girls, and one a student of that clever artist, Yvette Guilbert. But neither of them has shown that ability to convey by look or pose what they were meant to say without words. One played Pierrot, and was too feminine; but her lack was partly overcome by the music which served as an accompaniment. The other played Phrynette, the fickle laundress who is the cause of Pierrot's downfall, and, fresh and dainty tho she was, neither face nor figure could compensate for her inability to suggest her story without words.

It was M. Clerget—the Belgian actor—who showed us the true meaning of pantomime, who interpret-

White Studio

CLERGET, MASTER MIME

ed the true spirit of the ancient art. One superlative scene in especial would alone test and proclaim his power. Pierrot, in love with Phrynette, determines to fly with her to Paris, and in order to do so he decides to steal money from his father's strong-box, while the old man (Clerget) sits before a lamp with his wife and reads

his paper. What he reads is left for Clerget's face to tell us. Try it yourself, if it is such an easy matter. Yet to us watching Clerget, there was no doubt that *Le Temps* contained much gossip, much impropriety, much murder on that particular day. It was a sheer joy to watch his method.

It is perfectly right that pantomime should make use of all the accessories of drama, except the spoken word. In the second act of "Pierrot the Prodigal" the whole tone of Phrynette's coquetry, of Pierrot's disillusionment, is beautifully accentuated by the music score of André Wormser.

When the last act brought Pierrot home to his grief-stricken parents, two new characteristics of

pantomime became clearly defined to us: first, the almost tragic depths to which Clerget carried his "miming," which exploded the general belief that the emotional range of pantomime is limited, and usually tends toward excessive comedy; and, second, that pantomime might become a mold for new ideas and emotions.

New York City

## THE HEART OF NEW YORK

BY MARCUS M. MARKS

PRESIDENT OF THE BOROUGH OF MANHATTAN

**Y**OU hear much of the wealth, the business, the pleasures of the City of New York, but little of its heart. Many people frankly call New York heartless—others say it is cold, calculating, inhospitable, unresponsive.

They are wrong! Because New York does not wear its heart on its sleeve, it cannot fairly be called heartless. The real heart is never external, nor in physical evidence like the hand and face. But touch the pulse of brotherhood, ask for help for the unfortunate, whether at home or abroad, and there is an immediate response from a warm, full-blooded heart.

New Yorkers are busy; they live rapidly; many sensations are crowded into a day. A stranger coming to town may easily mistake this rush, this absorption, for selfishness, for lack of interest, for coldness. He sees

our streets, our skyscrapers, our shops, our theaters, our hotels, but he does not see us as we really are. He sees the outside, but not the inside. Let him pierce the surface, and he will find good-will, fraternity, sincerity.

Naturally, society here is complex; there is no single standard, no general type. The heart of New York is sympathetic—not exclusively with any single class of humanity, but with all human beings. There is no part of the world which can suffer without causing a thrill of pain in the heart of New York. Its veins and arteries flow with the fine blood of England, Ireland, Germany, Austria, France, Russia, Rumania, Italy, Japan, and other countries.

I say the *fine* blood advisedly. It takes fine blood to inspire a man to leave one's native land and brave the adventure of building a new home in

a far-off country. Those who have come to the United States have thereby shown a desire to grasp the broader opportunity and to secure the advantages of our free government. We are a land of pioneers. We have ties of kindred everywhere. New York is the world's nerve-center; the heart of the world. It bleeds for those who are suffering in the awful war abroad—it yearns for the end of destruction of human life and property. Would that we could help quickly to bring peace with justice. Such permanent peace is bound to come soon; wholesale slaughter is bound to cease. Science is bringing the ends of the world together. The ocean is growing smaller; we can almost reach across the waters and clasp our brothers' hands. The heart of New York is warm for the establishment of universal brotherhood.

New York City

# SOMETHING TO READ

## THE BOOKS OF THE EARLY FALL

### A FEW AUTUMN NOVELS

In the crowd of autumn fiction a dozen books, perhaps, have made their way to the front; some by reason of the name on the title page, others by sheer force of originality and personality. Of the latter class is *Casuals of the Sea*, by William McFee. Its distinction lies partly in the theme but particularly in the style, which is quite out of the ordinary. It is not an entirely pleasant book. Some of it is delightfully humorous, some of it is calmly sordid, all of it is convincing and interesting. It is the story of a North London family: a boy who went for a soldier, a girl who "went wrong," and a boy who went to sea. Each of them had a desire to break loose from a conventional, narrow existence, a longing for romance. They are not geniuses, they are merely casuals, but each of them had a little of the divine spark.

The idea of reincarnation is always fascinating, whether you take it seriously or not. Algernon Blackwood makes you believe in it implicitly thru the whole length of *Julius LeVallon*. The book tells how three souls met again after a million years and tried to set right a wrong committed in a former "section." There is overmuch repetition but the difficult theme is skilfully handled and the style is beautiful and melodious.

Stacy Aumonier may be new to the reading public, but his is no 'prentice hand. He can paint with vivid realism a life utterly sordid, unrelieved by one gleam of decency or kindness and yet never oppress the reader with the suffocating sense that this is the whole story. *Olga Bardel*, musician, was the child of such a world. Braile, the portrait painter, the other genius of the tale, was reared among the decencies

WILLIAM McFEE  
Engineer as well as story-teller

of a well-ordered English home. Olga's varied and sorrowful adventures and his inherited ideals and his memories bring them to the same standards. It is an honest, high minded tale, always interesting, with well drawn and living characters.

*The Dark Tower*, by a new writer, Phyllis Bottome, first appeared as a serial and does a little suggest having been written on the instalment plan. It begins in England, with dash and vigor and originality. When it gets to Switzerland it slows down. Then the author gets her characters into a situation from which she cannot extricate them and is driven by despair to the obvious course of sending the hero to the war, a commonplace conclusion which belies the promise of its beginning.

It seems to be a present day tendency to write your own life into a novel, a good tendency, on the whole, not only because truth is stranger than fiction, but because truth is apt to be more accurate than fiction when dealing with mental reactions. *The Triumph of Tim*, by Horace Annesley Vachell, has this autobiographical flavor with the added advantage of being written by a practised hand. The hero, who lives in an English village, in California and in France, is a man cut somewhat on the pattern of Kipling's *If*; he can "lose it all and start at the beginning," a man distinctly worth knowing.

To finish another person's book is a thankless task; all the good is sure to be ascribed to the original creator and all the bad to you. Thankless tasks are sometimes worth doing, however, and Lucas Malet, Charles Kingsley's daughter, deserves thanks for hers. She has found a half-written novel of her father's, *The Tutor's Story*, added to it and completed it so skilfully that the lines where old and new join are quite invisible. Tho written with a lighter touch than most of Kingsley's work it has the distinctive qualities of all his novels: action, romance, good characterization and high principle. The rising generation is likely to scoff at it as mid-Victorian, but the declining, or would we better say the risen generation, will like it—and they will be quite right.

F. Berkeley Smith has not made as successful a piece of work out of his father, F. Hopkinson Smith's unfinished novel, *Enoch Crane*. The story deals with the older New York of Washington Square which Colonel Carter knew. It has gleams of charm, but is obviously the work of two different authors.

*Multitude and Solitude* is an early novel of John Masefield's now pub-

STACY AUMONIER  
With notable short stories to his credit

PHYLLIS BOTTOME  
Whose mother founded the "King's Daughter"

ALGERNON BLACKWOOD  
Mystic, poet, weaver of tales

lished for the first time in this country. There is much of the poet Masefield in the idealization of the woman, the tropical setting, the nervous, fragmentary sentences. But it is naively planned, laggard in movement and too obvious and talky to carry much interest. The last third, taken by itself, is a good story of adventure in the African jungle.

Sir Gilbert Parker seems to have written his latest novel because every so often a book is expected, rather than because he had a story to tell. *The World For Sale* is a not very successful attempt to join his two fields, Canada and the Orient, by setting a Romany chief and his daughter in a little French-Canadian town. There is some charming writing in the book and plenty of excitement, but it is a bit obviously made to order.

The author of "The Beloved Vagabond" has failed in his recent novels to live up to the expectations of his readers and the possibilities of his own ability. "Viviette," published last season, was obviously a pot-boiler—hardly more than kindling wood at that. His latest story *The Wonderful Year*, tho still far from William J. Locke at his best, has more the flavor of his earlier work—his whimsical philosophy and skilful personality sketching. Monsieur Fortinbras, "Marchand de Bonheur," is a character worth journeying to Paris to meet. The good French innkeeper, Maitre Bigourdin, and his pretty niece Félise are pleasantly reminiscent of the ante-bellum days in fiction. We sympathize with them in their reluctance to leave the home-like little inn at Brantôme to fight in the Great War, but Locke insists on following the fashion and sees to it that the men of the party are provided with honorable wounds and the heroine with a chance to "do her bit" in a military hospital.

*Casualty of the Sea*, by William McFee. Doubleday, Page. \$1.50. *Julius LeVahon*, by Alarion Blackwood. Dutton. \$1.50. *Oiga Bardol*, by Stacy Aumonier. Century. \$1.50. *The Dark Tower*, by Phyllis Bottome. Century. \$1.25. *The Triumph of Tim*, by Horace Annesley Vachell. Dutton. \$1.40. *The Tutor's Story*, by Charles Kingsley. Dodd, Mead. \$1.35. *Enoch Come*, by J. Hopkinson Smith. Scribner. \$1.25. *Multitude and Solitude*, by John Masefield. Macmillan. \$1.35. *The World For Sale*, by Gilbert Parker. Harper. \$1.25. *The Wonderful Year*, by W. J. Locke. Lane. \$1.40.

#### ENGLISHMEN OF NOTE

Did the gentle reader know how far ahead of the average novel, simply in amusement are most of the books dully listed as memoirs, recollections, biographies, what thoroly light literature for the most part these really are, their sale would increase and their price drop somewhere within reach. Last year it was this country that put forth the most important of such works.

This season the best come from England tho there is nothing in the list to match for value to us the life of John Hay published a year ago. But there is plenty of entertainment between the covers of *Nearing Jordan*, by Sir Henry Lucy, the third and last volume of Toby M. P.'s "Sixty Years

© Elliott and Fry, London

"TOBY, M. P."

The genial writer for *Punch*

in the Wilderness," which deals mainly with men and affairs in England in the past quarter century. An extract from a journal of 1891 describes the mother of the Kaiser and throws an interesting light on her son in 1914. The Lucy table, for years a famous meeting place for notables, is the source of many racily told anecdotes, and there is a charming account of Swinburne, who, when deafness had shut him off from intercourse with his friends still managed to communicate with the children

© Underwood & Underwood

E. H. SOTHERN

Capt. Letterblaire and Lord Dundreary Jr.

he met in his daily walk, by means of small packets of cakes.

Another record of Swinburne, this time as a little lad, is found in Lord Redesdale's story of Eton as he knew it sixty years ago. His *Memories*, beginning with Eton, cover forty years in the British Foreign Office. Redesdale was with the Russian legation during the piteous business that ended in the betrayal of Denmark by the powers. In Japan he watched the disappearance of the Shogunate and the opening of the new era. He describes his Japanese house precisely as one imagines these structures. "It was built of fair white wood and paper, not much bigger than a doll's house and quite as flimsy. It had a tiny veranda, decked out with a half dozen dwarf trees, looking onto a miniature garden about the size of an Arab's prayer carpet . . . it seemed as if one must have shrunk and shrivelled up in order to fit one's self to it." An enlightening chapter on the relations of England and America during our Civil War shows plainly what the much decried diplomat may do and constantly is doing, to prevent war.

G. E. W. Russell's lively and informal *Portraits of the Seventies* include the great names in politics of that period, men he knew in Parliament, Gladstone, Disraeli, Parnell, Bright and others.

The career of *Lord Strathcona and Mount Royal* is almost the history of Canada since 1837. For thirty years one of the "Wintering Partners" of the Hudson Bay Company, dwelling in Labrador, absorbed in making the fur business pay; then a leader in the opening of the Northwest, the main mover in the building of the Northern Pacific, Donald Smith's life was one of adventure and hardy enterprise. At seventy-six he entered on a new career, as High Commissioner for Canada, in which he was to do more than any other one man to develop Canada's resources and to strengthen the bonds between the colony and England. A man of absolute integrity, indomitable, of far vision, of generous public spirit, he was a nation builder, and if the biography by Beckles Willson is seldom picturesque and seems scant of personal detail it deals fully with vast undertakings, and shows the romance of business enterprise and its part in the making of the new land.

*Nearing Jordan*, by Sir Henry W. Lucy. Dutton. \$3. *Memories*, by Lord Redesdale, 2 vols. Dutton. \$10. *Portraits of the Seventies*, by G. E. W. Russell, Scribner. \$3.75. *Lord Strathcona and Mount Royal*, by Beckles Willson, 2 vols. Houghton, Mifflin. \$6.50.

#### ABOUT THE THEATER

When so eminent a critic as Brander Matthews, the occupant of the earliest chair to be established in any American university specifically for the study of dramatic literature, turns aside "from his austere analysis of the genius of Sophocles and of Shakespeare, of Moliere and of Ibsen" to write *A Book About the Theater*, "to discuss the minor arts of the dancer and the acrobat, to chatter about the conjurer and the

A sequel to the famous "Gitanjali."

These two new volumes and Tagore's previously published works are now issued in the Bolpur Edition—a beautiful edition, celebrating Tagore's visit to America this season. There are ten volumes, each having the title pages and end papers in colors and a photogravure frontispiece.

Each volume in the Bolpur Edition \$1.50. Limp leather \$2.00.

Send for an illustrated booklet giving a sketch of Tagore's interesting life and a complete list of his writings.

negro minstrel, to consider the principles of pantomime" and "the development of scene-painting" the event promises unusual pleasure to the average reader. But Brander Matthews is a bit apologetic for his subject and he takes some pains to justify it. "These loiterings and these strollings," he says, "may be as profitable as that casual browsing about in a library, which is likely to enrich our memories with not a little interesting information that we might never have captured had we adhered to a rigorous and rigid course of study."

His chief interest has been given to the literary aspects and the art of drama. Now he disregards Drama with a capital D and considers it rather as "the Show Business." "It is a far cry from Buffalo Bill's Wild West to the *Œdipus* of Sophocles; but they are only opposite ends of a long chain which binds together the heterogeneous medley of so-called amusements."

The book is really a collection of essays, each devoted to some ramification of the Show Business, with just enough of its history and present use to give adequate background to the varied and pertinent comments. The last chapter, dealing with dramatic criticism, makes particularly constructive suggestions for the separation of "creative criticism" and newspaper reviewing, the first to be thoughtful, original judgment, written for posterity; the second merely contemporary reporting. "Where the critic can help is by disseminating knowledge about dramatic art and by raising the standard of appreciation in the public at large."

One critic at least is at hand to meet these requirements — John Rankin Towse, for forty-three years dramatic critic of the *New York Evening Post*, whose memories of *Sixty Years of the Theater* have just been published—an entertaining and informing record of the "honest impressions and convictions of one who has been a life-long lover and student of the theater, and who has enjoyed exceptional facilities for seeing it at its best and worst." For the most part these are random recollections, based on intimate acquaintance and collated with discernment. They throw interesting sidelights on the work of such famous stage personalities as Charles Kean, Modjeska, Ellen Terry, the Sothorns—father and son—Bernhardt, Irving and Forbes-Robertson. His chronicle is enlivened with anecdotes, such as the explanation of Dundreary's traditional skip, first played by E. A. Sothern.

Coming on the stage at the final dress rehearsal (I knew him well and am telling the story from his own lips), he caught his toe in the carpet and nearly fell head-long, saving himself by an improvised skip. Miss Keene saw the skip, but not the cause of it, and asked indignantly whether that was his idea of a British nobleman. He, piqued by the rebuke, replied in the affirmative, repeated the skip intentionally at the first public performance and made the hit that led to fortune.

One definite conviction stands out as the result of Mr. Towse's half century's study of the stage, "that is that during the last fifty years the art of acting

**THE MACMILLAN COMPANY, Publishers, NEW YORK**

# A Personal Statement

*From the President of the Encyclopaedia Britannica*

I wish the public to know fully of the approaching exhaustion of the India paper issue of The Encyclopaedia Britannica.

Before I hit upon the idea of using India paper in printing the Britannica, all encyclopaedia volumes were heavy, bulky and very awkward to consult -- volumes for the public library rather than for the home. But The Encyclopaedia Britannica on the thin, light, opaque India paper worked a revolution in publishing, and found a wider public than had ever used an encyclopaedia before.

150,000 sets of the Britannica, or 4,350,000 volumes, have already been sold, of which 97.3 per cent. were printed on India paper.

To keep pace with this unprecedented sale every paper mill in the world that could make India paper worked day and night. WE HAVE USED 4,200 TONS, or 8,400,000 lbs. of it, whereas formerly only a few hundred tons were made in a year.

I was encouraged by the wonderful success of the Britannica to print The Century Dictionary, the only really adequate dictionary of the English language, on the same beautiful paper. I arranged for this -- and then our binder invented a new kind and style of binding which made it possible to issue The Century Dictionary with over 8,000 pages, formerly published in 10 volumes, in a single volume. A revolving rack which can be placed on any desk or table goes with each copy.

The principal raw material of India paper is a certain kind of flax grown in Germany, Belgium and Great Britain. THE WAR HAS RUINED THE FLAX INDUSTRY in those countries, not only for the present but for years to come. It has therefore eliminated India paper from the market and made impossible the reprinting of the Britannica and the Century except on old-fashioned book paper.

This means that anyone who desires to buy either of these works in their present ideal and perfect form must do so soon.

The exact stocks on hand are as follows:

(1) Of the Cambridge Issue, with large pages and large type, more than 75,000 sets have been sold, and there are only 1,700 sets remaining. Of course these will all be gone within a very short time.

(2) Of the Handy Volume Britannica, which is sold at 60% less than the Cambridge Issue, 70,000 sets were sold by Sears, Roebuck and Co. of Chicago, who have exclusive sale of this issue, in the six months from January 1st to July 1st, and there are less than half that number still unsold.

(3) There are less than 9,000 copies remaining of The Century Dictionary in its new one-volume form, but it is very doubtful if any of these will remain unsold by Christmas.

The question now arises, at what price shall these remaining sets of the Britannica and the Century, printed on India paper -- THE LAST THAT CAN EVER BE OFFERED -- be sold.

I would be justified in asking a much higher price, not only because the India paper sets are so nearly exhausted, but because it is impossible to replace them. But I have decided that as The Encyclopaedia Britannica is a great educational institution, every remaining set shall be sold at the same low price that I placed on it when I supposed that I could buy all the India paper I wanted and could print as many sets of The Encyclopaedia Britannica and The Century Dictionary as the public would buy.

I am an enthusiast on the subject of India paper for large books of reference. The Encyclopaedia Britannica is at least five times as handy as the same books printed on heavy paper, and this means that they will be used five times as frequently and therefore do five times as much good.

Having taken so much interest in perfecting this idea, I am of course very much disappointed that I cannot print, as I had expected to do, an unlimited number of copies of the Britannica and the Century on it, and in order that the public may not also be disappointed by applying TOO LATE for the sets that are left, I now give them FAIR WARNING to send in their orders without delay.

President.

September 15, 1916.

## *All of these sets are printed on the famous India Paper*

The Encyclopaedia Britannica, Cambridge issue, in 29 volumes, 1 inch thick, large pages, large type, 30,000 pages, 41,000 authoritative articles, 44,000,000 words, 1,500 noted contributors, 15,000 illustrations, full-page plates and maps--sent for a first payment of \$5.00 and a limited number of monthly payments of the same small amount.

The popular edition known as The "Handy Volume" Issue is precisely the same as the Cambridge issue in every detail except size, and sells at 60% less. Each volume measures 6¼ inches wide by 8¾ inches high by 1 inch thick. It will be sent for a first payment of \$1.00 and \$3.00 a month for a limited period.

The Century Dictionary (revised), the only complete dictionary of the English language. 325,000 words fully defined by 600,000 concise explanations, 10,000 illustrations, more than 8,000 pages--which, by a new invention, have been bound into a single flexible volume of instant and easy reference. Sent for a first payment of \$1.00, to be followed by a few monthly payments of \$3.00.

Sets of the above can be seen at the following offices of the Encyclopaedia Britannica:

CHARLES SCRIBNER'S SONS, Fifth Avenue, New York

upon the English-speaking stage has steadily declined. . . . The only chance for a real and permanent theater revival—the reestablishment of the theater, that is, upon a dramatic, literary and artistic foundation, with actors capable of interpreting either masterpieces or pot-boilers, lies in the restoration of the stock system and of honest, wholesome competition."

Somewhat this same conviction, based however on a completely different point of view, was held by Heinrich Conried, who built up the success of the Metropolitan Opera House, directed the productions of German classics at the Irving Place Theater, now the Deutsches Theater, and furthered the experiment of the New Theater in New York. Montrose J. Moses has written an informing and comprehensive biography of him, not so much a story of Heinrich Conried, the man, but rather a record of the achievements of *Heinrich Conried*, the theatrical manager. It was when he was only twenty-one years old that Conried first claimed that title, and with it control of the Stadt Theater at Bremen. "From that moment he began to realize his managerial capabilities. For when the experiment was finished it was found he had paid all the actors their full salaries." In later years he showed still further the characteristics that dictated his first definition of "managerial capabilities." Mr. Moses calls it "financial discernment." "Tho he might never drive a bargain with his ideals, he sometimes did with the expression of those ideals. He had the sense of monopoly."

That he was willing to risk financial success for an artistic ideal was proved, however, by his attitude toward the New Theater. His biography gives fully and impartially the salient facts in his connection with that interesting venture.

But after all in comparison with an autobiography any biography, no matter how good, must fall flat. The humorist's definition "An autobiography is what a biography ought to be" needs no proof, but it fits particularly well Edward H. Sothorn's entertaining book of remembrances *The Melancholy Tale of Me*. Few stories are so readable, so full of interest, and so thoroly worthwhile as these chapters in the life of "Me," Mr. Sothorn's nickname for the little boy from whom he grew up.

Along with the narrative is woven the genial, philosophical comment of the grown-up's point of view. "I Talk to Myself," the concluding chapter, is a remarkable essay on the values of life.

Of course, these reminiscences are much of the theater, but they are concerned altogether with people rather than with parts. "Said my fairy god-mother, who is responsible for these pages 'There is no talk here about your own acting,' said I: 'There shall not be, and for these weighty reasons: Acting, if it speaks at all, leaves nothing to be said. If it is stillborn, the less said of it the better.'" But if we must form our opinions of the acting of Sothorn from other sources, we have here delightful evidence of his rare personality and

incidentally of his qualifications as an author.

*A Book About the Theater*, by Brander Matthews. Scribner. \$2.50. *Sixty Years of the Theater*, by John Rankin Towse. Funk and Wagnalls. \$2.50. *Heinrich Conried*, by Montrose J. Moses. Crowell. \$2.50. *The Melancholy Tale of Me*, by Edward H. Sothorn. Scribner. \$3.50.

#### AMERICAN MEN AND WOMEN

Three reprints stand out in the small group of American biography this autumn. All deal with the Civil War, the most important being the *Autobiography of George Dewey*. With Farragut at New Orleans his story is of great events and great figures. The latter part of the book gives the share of the Asiatic squadron in the Spanish war. Curiously, years before, at the time of the Virginius affair, Dewey, then commanding the "Narragansett" in the Gulf of California, had said: "If war with Spain is declared, the 'Naragansett' will take Manila."

The most interesting pages of Mrs. Burton Harrison's *Recollections Grave and Gay* center about Richmond, and give a vivid and touching picture of the charming social life of Virginia before the war, and of the splendid courage and the quality of romance that the Southern people carried into their terrible struggle. Mrs. Logan's *Reminiscences of a Soldier's Wife*, are of another type. She came of the pioneer stock of southern Illinois, knew the plain, hardy life of folk near the frontier, the dangers of the border in war time, and was much of the four years at the front with her husband.

Harriet Prescott Spofford's *Little Book of Friends* also gathers names famous a long generation ago, Gail Hamilton, Rose Terry Cook, Celia Thaxter, and Mary Louise Booth. In the paper on Sarah Orne Jewett is printed a poem, *The Gloucester Mother*, which makes one wish that a volume of verse had been included in the all too slender output of that undoubted artist.

*Recollections of a Happy Life* were written at the request of close friends of Elizabeth Christophers Hobson. Privately printed in 1914, they are now given a chance at the wider circulation they deserve. Mrs. Hobson was the wife of a prominent American merchant in Peru, and her life in South America from 1850 to 1869 makes a novel story. On her return to New York, where family and business connections brought her naturally into wealthy and influential circles, she was one of the most active of the wise and determined women from whose investigation of the unspeakable conditions at Bellevue in 1872 grew the first training school for nurses in this country. Many interesting people figure in her pages, as Marion Crawford, who was with her party during a residence in Turkey and married a niece. Late in life she undertook an investigation of the problem of negro education in the south, Tuskegee being then in its infancy. From this journey grew the systematic inclusion of industrial work in the Southern public schools now carried on by the States Fund.

## NEW FALL BOOKS

## The Old Blood

By FREDERICK PALMER

Author of "The Last Shot," "My Year of the Great War," etc.

A Romance of the Great War. The American hero and the two beautiful French girls develop an exquisite love theme of delicacy, pathos and sympathy—the human values in the turmoil of the great world conflict. \$1.40.

## Love and Lucy

By MAURICE HEWLETT

Author of "The Forest Lovers," "Richard, Yea and Nay," etc.

"... his old-time skill and mastery. . . . A masterpiece. . . . The best thing from Mr. Hewlett's pen that has been published in this country since the Sanchia trilogy. . . . ought to be one of the landmarks of the season."—*Philadelphia Public Ledger*. \$1.40.

## Watermeads

By ARCHIBALD MARSHALL

Author of "Exton Manor," etc.

"Extraordinary charm . . . moves along like beautiful voices with orchestral accompaniment. . . . I have read all his novels, and have never finished one without wishing that we could follow his people farther. . . . If there are any readers who do not like Mr. Marshall's novels, I am sorry for them."—*Professor William Lyon Phelps, of Yale University, in "The Dial"*. \$1.50.

## Hinduism: The World Ideal

By HARENDRANATH MAITRA

With an introduction by G. K. Chesterton.

Chesterton writes: "I very warmly welcome this able statement. . . . His enthusiasm is for the human side of Hinduism, which touches the heart and makes the lofty ideals of the Vedas a practical religion and poetry." \$1.25.

## The Art of Interior Decoration

By GRACE WOOD and EMILY BURBANK

The fundamental laws for obtaining practical and artistic results. Entire schemes for all kinds of homes. Also the evolution of furniture "periods." 32 illustrations in duotone on dull finish paper. Boxed, \$2.50.

## We Discover the Old Dominion

By LOUISE CLOSSER HALE

Full page illustrations from drawings by Walter Hale

A humorous, chatty account of a motor tour of "discovery" through picturesque Maryland and Virginia—a companion book to "We Discover New England." Boxed, \$2.50.

## Old Seaport Towns of New England

By HILDEGARDE HAWTHORNE

The alluring romance of the picturesque and historical settlements—a delightful travel book of humorous and personal touches. Illustrated from drawings by John A. Seaford. Boxed, \$2.50.

Our handsome, illustrated catalogue describes fully these and many other valuable books. May we send you a copy?

## The Wrack of the Storm

By MAURICE MAETERLINCK

"... some of the most idealistic and beautiful things that have been written about the war . . . born out of the war itself, a sort of, exquisite flowering from its horrors. But there—one would have to be a poet oneself to describe it."—*N. P. D. in The Globe, New York*. Cloth, \$1.50. Limp leather, \$1.75.

## The Life of the Caterpillar

By J. HENRI FABRE

Author of "The Hunting Wasps," etc.

Fabre shows us with scientific precision, yet vivid descriptive force, and with the imagination of a poet, insects—their lives, loves, comedies and tragedies, duplicating the passions of human nature. \$1.50.

## Memories of the Fatherland

By ANNE TOPHAM

Author of "Memories of the Kaiser's Court," "Governess for seven years to the Kaiser's daughter."

The best of Germany, the Germany of a saner, happier time, when peace reigned and all seemed well with the world. Illustrated, \$3.00.

## Poland's Case for

## Independence

Endorsed by the Polish Information Committee and written by Poles who have made a life-study of their people's cause. \$3.00.

## A Woman in the Balkans

By MRS. WILL GORDON, F.R.G.S.

The strange, fantastic story of the Balkan lands—their politics, history, and their great personages and diplomats. The result of an exhaustive tour before and during the war. Illustrated. \$3.50.

*In Spite of the Handicap* is a straightforward story of his own life, by James D. Carrothers, a Northern negro, a minister and a successful newspaper and short story writer. It is written to show the difficulties that confront a negro at the north, how at every turn his path is still barred, not alone by the white race, but by the ignorance of the colored people themselves. This book is due to Ray Stannard Baker, who writes the preface.

As merry and as kindly as they by rights should be are the reminiscences in C. E. Laughlin's slender book on *James Whitcomb Riley*. Not intended as a life, that is in the making, it is the record of a delightful friendship skilfully told, without exaggerations and with a keen sense of humor.

*Autobiography of George Dewey, Recollections Grave and Gay*, by Mrs. Burton Harrison. *Reminiscences of a Soldier's Wife*, by Mrs. J. A. Logan. Scribner. \$1.50 each. *A Little Book of Friends*, by H. P. Spofford. Boston, Little Brown. \$1.25. *Recollections of a Happy Life*, by E. C. Hobson. Putnam. \$1.25. *In Spite of the Handicap*, by J. D. Carrothers. Doran. \$1.25. *James Whitcomb Riley*, by C. E. Laughlin. Revell. 75 cents.

## ART AND ARTISTS

Art does not thrive in war time, as witness the thin stream of books on art in any form, coming from this year's presses. A few convenient handbooks there are, by far the best and most needed of these that on *The Russian Arts*, by Rosa Newmarch. We do not recall any single book on English, French or Italian art which in 285 pages says half as much or says it quarter as well. Nearly the body of the book is given to the dullest period in European art, from the middle of the eighteenth to the close of the nineteenth century. Plenty of commonplace painters get about a page apiece and deserve no more, but that page offers either a figure, of definite even tho mistaken intention, drawn from life, or a few paintings sharply realizable even if banal and sentimental. The style is that of cultivated conversation, the pleasantest that can be found for a book avowedly popular, and tho the author hardly perhaps takes into account the ignorance of the English reader the work is a most useful addition to the scant literature on its subject. In a new edition one may hope for more illustrations of the chapters on architecture, iconography and engraving.

An odd little book, *Greek Gods and Heroes*, connects the history of Greek art with mythology and political history, weaving all about the collections in the Boston museum. Tho planned for the use of the Boston high schools the book is a succinct reference book, useful beyond the limits of Copley Square. A glance over the bibliography appended to H. N. Fowler's concise but inclusive *History of Sculpture* shows the call for such a guide, not simply a dictionary tho including many names and dates with little further mention; nor is it critical, but a freely illustrated general account of the different schools and periods. In *Painters of Florence* Julia Cartwright includes the results of recent discovery and criticism, but neither is her book critical, but rather

DODD, MEAD & COMPANY, 433 Fourth Ave., New York

a gathering into convenient compass of the facts and theories about the work of Giotto, Filippo, Botticelli, Leonardo and the other painters of the Florentine school.

It hardly needs be said that Professor Mather's *Estimates in Art* is direct, independent, thoughtful and interesting. Whether one agree or not with his judgment of Watts, or his view of Sorolla one stops to weigh the opinion of a man who looks at pictures seriously and with knowledge, and with his own eyes. El Greco, Goya, Claude's small pencil sketches, are among the topics of his chapters. *Certain Contemporaries* as Glackens, Lawson, John Sloan, Sargeant as a water colorist, are studied in A. E. Gallatin's short but sympathetic notes in art criticism which are attractively reprinted from the leading art magazines and freely illustrated.

A very beautiful bit of book making is Eliot Clark's essay on *Alexander Wyant*, privately printed. Besides being an enlightening critical study of one of the American artists who led us the next steps beyond the Hudson River School, its illustrations are a delight—one in beautiful color, and fourteen uncommonly fine photogravures—while it is a satisfaction to see such paper, type and page.

*The Russian Arts*, by Rosa Newmarch. Dutton. \$2. *Greek Gods and Heroes*. Houghton Mifflin. 60 cents. *History of Sculpture*, H. S. Fowler. Macmillan. \$2. *Painters of Florence*, Julia Cartwright. Dutton. \$1.50. *Estimates in Art*, by F. J. Mather, Scribner. \$1.50. *Certain Contemporaries*, by A. E. Gallatin. Lane. \$3. *Alexander Wyant*, by Eliot Clark, New York. F. F. Sherman, \$12.50.

## THE REDISCOVERY OF AMERICA

The first effect of the Great War was enormously to stimulate interest in foreign affairs. Not only did books dealing with the Great War appear daily and attain enormous sales, but histories of Germany, Belgium, Russia, the Balkan States and all the other warring countries found a wider circle of readers than ever before. American histories languished a little beside the tropical exuberance of this new growth. But the war has had a secondary result which is now beginning to make itself felt, an enhanced interest in the past, present and future of the Americas. The issues raised by the war have at once troubled our national conscience and increased our national faith. We are more than ever interested in such questions as patriotism, preparedness, the Monroe Doctrine, the "melting pot" and whether it can melt the hyphen, and our relations with our sister republics of the New World. For the student of American ideals thruout our earlier history nothing could be better than the five-volume series of extracts from the writings and speeches of *American Patriots and Statesmen*, under the general editorship of Professor Albert Bushnell Hart of Harvard University. The source material in these volumes covers the period from the earliest discoveries to the death of Abraham Lincoln. The sage advice of the Revolutionary statesmen, the debates about the new constitution, the spread-eagle oratory of the age of Henry Clay and westward expansion, the great political struggles

# RECENT PUBLICATIONS

NEW BOOK BY PRINCIPAL FORSYTH.

## THE CHRISTIAN ETHIC OF WAR.

By the Rev. P. T. FORSYTH, M.A., D.D., Principal of Hackney College. 8vo. \$2.00 net. CONTENTS:—Killing no Murder—The Judgment of Crime by Crime—War and Love—Judgment by the Saints—Passive Resistance—The Moral Sanction of Force—Christian Love as Public Righteousness—Christian Ethic Lay and Historic—Christian Ethic Historic and National—Justification and Judgment—The Judgment on the Cross and in the Field.

## FAITH AND LIFE. 'Conferences' in the Oratory of Princeton Seminary.

By BENJAMIN B. WARFIELD, Professor in the Seminary. Crown 8vo. \$2.00 net. Forty-one addresses are printed in this book. They are not exactly Sermons, but brief expositions of practical passages of Scripture, designed to ascertain their precise teaching on matters of practical import and to exhibit their value for the Spiritual life.

## SELF-TRAINING IN PRAYER.

By the Rev. A. H. McNEILE, D.D., Fellow and Dean of Sidney Sussex College, Cambridge, Author of "Deuteronomy: Its Place in Revelation." 16mo. \$0.50 net. "This is a little book, but a great one, for it is a successful attempt to realize prayer, not merely as a religious duty, but as a religious experience. It essays to seek and to find the element of reality in prayer."—*The Guardian*.

## THE DAWN OF RELIGION IN THE MIND OF THE CHILD. A Study of Child Life.

By EDITH E. READ MUMFORD, M.A., Girton College, Cambridge, Author of "The Dawn of Character," etc. Crown 8vo. \$0.50 net.

The writer in a previous book—*The Dawn of Character*—had endeavored to interpret the experiences of a child in our own day and generation, brought up amid happy and sympathetic surroundings. One chapter only in that book dealt with the dawn of the child's religious life. She has therefore tried, in this book, to develop in greater detail the thoughts suggested in that single chapter; and to show the lines along which the religious development of the child takes place.

## FROM DOUBT TO FAITH.

By HORACE G. HUTCHINSON. Fcap. 8vo. \$0.50 net. This is an attempt to help the agnostic in his doubts and difficulties, and is a very simple record of the means by which those problems were solved and faith in Christianity reached by one who had long been an agnostic.

## LESSONS ON THE LIFE OF JESUS CHRIST AS IT IS RECORDED IN THE GOSPEL OF ST. MARK. For Schools and Classes.

By the Rev. JAMES ROBBIE, M.A., B.D., Lecturer in Religious Instruction in the Training College, Dundee. Crown 8vo. \$0.75 net.

This book seeks to show how a clear, complete picture of the life of Jesus Christ may be formed in the mind of the child.

## MARRIAGE AND MORALITY: Papers by Various Authors.

SUCCESSFUL AND UNSUCCESSFUL MARRIAGES. By Louise Creighton. Sewed. \$0.12 net. MARRIAGE, A HARMONY OF BODY AND SOUL. By Gemma Bailey. Sewed. \$0.10 net. PURITY. By A. H. Gray. Sewed. \$0.10 net. IN PRAISE OF VIRGINITY. By Elma K. Paget. Sewed. \$0.10 net. \*Others to follow.

These papers have been written in the belief that the presentation of positive and constructive ideals of sex relationship is one of the great needs of the time.

## NATURE, MIRACLE AND SIN: A Study of St. Augustine's Conception of the Natural Order. The Pringle Stuart Lectures.

By T. A. LACEY, M.A. 8vo. \$2.00 net. The aim of these lectures, delivered in the Schools at Oxford during the summer term of 1914, is to clear Saint Augustine from the charge of teaching the total depravity of human nature, and a Manichæan doctrine of evil.

## THE REMINISCENCES OF THE RIGHT HON. LORD O'BRIEN, LORD CHIEF JUSTICE OF IRELAND.

Edited by His Daughter, Hon. GEORGINA O'BRIEN. With portrait. 8vo. \$2.50 net.

## ARTISTS AND THINKERS.

By LOUIS WILLIAM FLACCUS, Assistant Professor of Philosophy in the University of Pennsylvania. Crown 8vo. \$1.25 net.

These essays are studies in the border-line relations of art and philosophy. They discuss the personalities, methods, and art theories of Rodin, Maeterlinck, Wagner, Tolstoy, Hegel, and Nietzsche, and trace a few of the variations of the problem: Is the Artist a Thinker, and the Thinker an Artist?

## EAST AND WEST THROUGH FIFTEEN CENTURIES: Being a General History from B. C. 44 to A. D. 1453.

By Brigadier-General G. F. YOUNG, C.B., Author of "The Medici." (In Four Vols.) 8vo. Vols. I and II. Vol. I. With 58 Illustrations and 2 Maps. Vol. II. With 12 Illustrations and 1 Map. \$12.00 net.

These two volumes cover the history of 800 years up to, in the east, the death of the Emperor Leo the Iconoclast in 749, and, in the west, the death of Charles Martel in the same year.

## READINGS IN THE ECONOMIC HISTORY OF THE UNITED STATES.

By EDWIN C. BURRITT

An adventure tale of the South Seas which will take its place in the boy's heart next to "Treasure Island" and "Robinson Crusoe."

*Illustrated. Net \$1.25.*

over slavery and the union are each represented by numerous brief citations from public men of every shade of opinion.

*English Influence on the United States*, by Professor W. Cunningham of Trinity College Cambridge, a distinguished writer on economic history, is an account of some part of the institutions of America which bear the mark of an English origin, however modified by later influences and the experiences of a new environment. Such are, for example, the New England township, civic architecture, the American flag, the college, the individualist tradition in economics, and the policy (now abandoned by England) of diplomatic isolation. One of the most human of all our historical documents has been resurrected by Professor James A. Woodburn of Indiana University; *The New Purchase*, a book describing under fictitious guise the life and customs of the people of central Indiana in the third decade of the nineteenth century. The author, Baynard Rush Hall, who wrote under the pen-name of Robert Carlton, was the first professor appointed to teach in "The Indiana Seminary," now Indiana University. He had a shrewd and merciless pen, together with a wealth of humor, and his descriptions of his neighbors are as amusing as Mark Twain's sketches of pioneer Nevada in "Roughing It."

Among other recent studies in American history are three books on the Civil War. *The Life of John A. Rawlins*, is an appreciative biography of the Union general by Major-General James Harrison Wilson. *McClellan*, by James H. Campbell, is a passionate defense of General McClellan's military career. The writer insists that but for the interferences of President Lincoln and the jealous machinations of Secretary Stanton the Confederacy would have been crushed in 1862. It may be so, but the writer's evident partizanship makes his argument less convincing than it would otherwise have been. *Campaigns and Battles of the Army of Northern Virginia*, by George Wise, is a well-documented military history from the Confederate viewpoint. The official reports of the generals on both sides are the chief sources for this excellent study.

Our neighbors to the south have not been forgotten. *Modernizing the Monroe Doctrine*, by Charles H. Sherrill, chairman of the committee on foreign relations of the chambers of Commerce of the United States and sometime minister to Argentina, is an attempt to bring about such an understanding between the United States and the other American republics as to make Pan-Americanism a possibility. Of particular interest is the author's scheme, which he brought forward a year or more ago, for swapping the Philippines for European colonies in the Caribbean region. The increase of trade with Latin America is creating its own literature. An exceptionally full and valuable manual, containing not only much general information about the countries collectively and individually but also many

## OFFICE EFFICIENCY

You are invited to consult The Independent's Plan and Purchase Department with regard to the selection and purchase of any equipment that may be desirable to attain the highest degree of efficiency in your office, your factory or your business building. This department is conducted by The Independent-Harper's Weekly Efficiency Service, in association with the National Institute of Efficiency. For a limited time this service will be supplied to any reader of The Independent or any member of the National Institute of Efficiency without charge.

practical hints to the trader, is Ernst B. Filsinger's *Exporting to Latin America*.

*Caribbean Interests of the United States*, by Professor Chester Lloyd Jones of the University of Wisconsin, is an informing and well-considered account of the conditions actually existing in the various European colonies and petty republics that flank that strategic sea. The author regards the responsibility for peace in this region as belonging peculiarly to the United States and protests against any plan to share it with other American states. A more intensive study in the same general field is *Anglo-American Isthmian Diplomacy*, by Dr. Mary W. Williams, which covers a century of negotiation and conflict over the interoceanic canal site and British spheres of influence in Central America.

Two volumes of historical essays have recently appeared which are of more than passing significance. *The Purpose of History*, by Professor Frederick J. E. Woodbridge of Columbia University, is a profound and subtle study of the science of history as a branch of philosophy. *Towards an Enduring Peace* is a series of articles or excerpts from the writings of the leading constructive pacifists of Europe and America, analyzing the general causes of the Great War and suggesting statesmanlike solutions of the international problems that endanger a permanent peace. The book was compiled by Randolph S. Bourne for the American Association for International Conciliation, and it includes the thought of such men as John A. Hobson, H. N. Brailsford, G. Lowes Dickinson, Charles W. Eliot, Hamilton Holt, Norman Angell, Eduard Bernstein, Franklin H. Giddings and many others, as well as the projects and manifestoes of the more important pacifist organizations.

No general work upon American diplomacy has appeared of greater interest than *America's Foreign Relations*, by Willis Fletcher Johnson, author of "Four Centuries of the Panama Canal" and other standard works in political history. The author regards the principles and incidents of our foreign policy as "topics which are among at once the most important and the most neglected or most misunderstood in all our national annals." If such well-balanced popular histories as this attain a wide circle of readers much will be done to remedy the American indifference to international questions of which Mr. Johnson complains.

*American Patriots and Statesmen*, 5 vols. A. B. Hass, ed. Collier. 43. *English Influence on the United States*, by W. Cunningham. Putnam. 21.75. *The New Purchase*, J. A. Woodburn, ed. ## A Gift to Last a Lifetime

You can make one gift this coming Christmas that will be remembered gratefully many Christmases hence. The passing of the years will not affect its enduring usefulness.

Time and again its recipient will turn to it and its presence will serve as a continuing reminder of the good taste of the giver.

This gift is

### THE NEW INTERNATIONAL ENCYCLOPAEDIA SECOND EDITION

Every American will be proud to own this latest achievement of American scholarship. In these twenty-four volumes is more than the mere recital of many facts—there is opportunity and a new breadth of vision.

For the business or professional man—The New International offers a broadened outlook on life—an all-around education that leads on to success.

For women—The New International is the interpreter of that larger world of affairs into which they are everywhere entering.

For children—The New International comes as a delightful background for the routine work of education. Think what it would have meant to you as a youngster to have had such a fascinating work at hand.

The coupon below will bring you full details of the scope of The New International. Here is but a brief summary of some of its riches:

**80,000 articles**—(30,000 more than in any other encyclopaedia) treating every subject of human interest in compact manner and understandable style.

**Illustrations**—profuse and of the highest type in colors and black and white.

**Maps**—compiled from the latest data, dependable and complete.

**War Articles**—treating in a gripping manner the causes and progress of the Great War and discussing the new problems that the War has brought up. The New International alone among encyclopaedias, contains this material.

**American Articles**—such as are to be found in no other encyclopaedia covering every phase of American life from Christopher Columbus to Columbus, N. M.

**Key to Pronunciation**—a unique feature and an invaluable one, giving the authoritative pronunciation of every name and subject.

**Bibliography**—a list of works for further reading on every important subject.

**Thin Paper**—you will be delighted with the ease with which this durable paper can be handled. A special Library Edition is printed on regular book paper and bound in Library Buckram.

You owe it to yourself to know more about this splendid product of American brains and research.

**Today**—before the rush of Christmas plans begins—tear off the coupon. We will send you free of charge a book of specimen pages from The New International with color plates and duotone illustrations, particulars as to price, Courses of Reading and Study, etc., etc.

## What 15c Will Bring You from the Nation's Capital

The little matter of 15c in stamps or coin will bring you the *Pathfinder* 13 weeks on trial. The *Pathfinder* is an illustrated weekly, published at the Nation's Center, for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now as in the past. This paper tells the truth without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, readable, entertaining, wholesome, the *Pathfinder* is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly, accurately, send 15c to show that you might like such a paper, and we will send the *Pathfinder* on probation 13 weeks. The 13 does not imply a trial or a gift; it is an investment in new friends. The *Pathfinder*, Box 39, Washington, D. C.

## Important New Books

The biography of a famous American  
Jurist

## The Life of John Marshall

Vol. I. Soldier and Lawmaker

Vol. II. Politician, Diplomat and Statesman

By former senator **Albert J. Beveridge**

The definitive biography of a great American statesman, whose influence was one of the decisive factors in shaping the form of our government. These two volumes illuminate not only the character and career of the man himself but also the history of the United States during a crucial phase of its development. *Illustrated. 2 vols. \$8.00 net.*

### With the Turks in Palestine

By **ALEXANDER AARONSOHN**. An interesting phase of the world war is illuminated for the first time in this thrilling personal narrative describing the adventures of a young man who was impressed into the Turkish army, while taking motion pictures in the Holy Land.

*Profusely illustrated, \$1.25 net.*

### Friends of France

*The Field Service of the American Ambulance Described by its Members*

"One of the most poignant and beautiful books written about the war."—*New York Times*.

The major portion of the profits from the sale of this book will be devoted to the work of the field service of the American Ambulance in France.

With more than 50 uncensored photographs and drawings by famous French artists. *\$2.00 net.*

### A Volunteer Poilu

By **HENRY SHEAHAN**. This vivid and brilliant book does for the French army what "The First Hundred Thousand" and "Kitchener's Mob" have done so successfully for the British.

*Illustrated, \$1.25 net.*

### Ambulance No. 10

*Personal letters from the front*

By **LESLIE BUSWELL**. "It has impressed me more than anything else from the front that I have seen."—*A. Lawrence Lowell*. "In the crowd of books upon the war which fall in upon us, this is one of the very few really worth reading."—*Henry Cabot Lodge*.

*Illustrated, \$1.00 net.*

### The Wall Street Girl

By **FREDERICK ORIN BARTLETT**. The story of a young man's hesitation between a young heiress with an allowance of \$10,000 a year and \$10.00 a week stenographer, and of his final right choice. Called by the *New York Times* "A triumph for any writer of fiction."

*Illustrated, \$1.35 net.*

### The Romance of the Martin Connor

By **OSWALD KENDALL**. "To anyone who likes stories of the sea, of adventure and of foreign shores, the adventures of the Martin Connor will prove red-blooded enough for the most exacting. . . . It is genuine romance."—*Boston Transcript*.

*Illustrated, \$1.25 net.*

### Skinner's Dress Suit

By **HENRY IRVING DODGE**. A lively and amusing story of a dress suit that brought business success to a man, social recognition to his charming wife, and happiness to both.

*Illustrated, \$1.00 net.*

### The Taxation of Land Value

By **YETTA SCHEFFEL**. This is the first attempt to differentiate between the tax on land value and the Single Tax, and to present fully the experience with the system in the countries which have introduced the tax. *Hart, Schaffner & Marx Prize Essay.*

*\$2.00 net.*

### Tales of the Labrador

By **WILFRED T. GRENFELL**. Eleven stories of peril and adventure among the hardy fishermen of Labrador, and their Eskimo neighbors, told by the missionary doctor whose name is a household word for courage and devotion.

*Frontispiece, \$1.25 net.*

## JOHN MUIR'S

## A Thousand Mile Walk to the Gulf

Muir's journal of his tramp from Indiana to Florida in 1867 and of his trip thence to Cuba and finally to California will be warmly welcomed, because it is interesting in itself as well as for the light it throws on the development of the great naturalist's aims. The work has been skilfully edited by Prof. William F. Badé, who performed a like service for Mr. Muir's "Travels in Alaska." *Fully illustrated, \$2.50 net. Large Paper Edition. Bound in boards with cloth back and paper label. With hand colored photograph frontispiece and other illustrations. Limited to 500 copies for sale. \$5.00 net.*

Boston **HOUGHTON MIFFLIN COMPANY** New York

## Independent Opinions

As this is the last chance for our readers to say anything about politics—or at least to say anything that will have any effect on the issue—we shall give our political correspondents all the space at our disposal. In order to hear from as many as possible we shall publish quotations from the letters rather than the complete letters. We are especially sorry not to be able to print in full the long letter from a well-informed correspondent in criticism of Mr. Hapgood's remarks on Mexico in our issue of September 18, but we can quote only one of the points raised by Mr. Lynch:

Mr. Hapgood says, "Mexico's merchandise exports in the last fiscal year surpassed all previous records." Does Mr. Hapgood intend to say that business was better during the last fiscal year than at any previous time in Mexico's history? That would have to be the interpretation of his statement, but let us see. I think it is a fact that these exports do not represent legitimate and lawful business only to an extent. Bear in mind this, that all business thruout practically the entire Republic was paralyzed; that railroads were for the most part out of commission; that a large per cent of the best business men of the country had fled, and were and are out of the country, and draw your own conclusions as to the prosperity intended to be assumed by Mr. Hapgood.

It might be appropriate to inquire whence came those marvelous exports, indicative of prosperity? And in reply to the question give you a hint of the method. During the Diaz administration in Mexico, cattle were exported to the United States free of duty. During the Villa and Carranza regime cattle shipped from Mexico have paid an export duty, in instances both state and federal, varying according to the will and power of the particular chieftain thru whose port they were shipped. It is a matter of common information that cattle were gathered up by the tens of thousands, anybody's cattle, and shipped and sold in this country. Many times the duty collected was near the value of the cattle. This condition applied to most of the exportable natural products of the country, in a word they were commandeered, and shipped to us, and we bought and used, without regard as to whether the owner was paid or not, whether it were Mexican or American property. To the point the exports boasted of did not represent business as generally understood in this country.

CHARLES P. LYNCH

Buckhannon, West Virginia

Your publication of the letter of Mrs. A. C. Hindman, of Boise, Idaho, in which she says, "he kept us out of war. He Kept Us Out Of War, HE KEPT US OUT OF WAR," leads me to believe that New York and Idaho are so far from the Mexican situation that neither can comprehend the terrible effect of Mr. Wilson's policy on Mexico, whether Mexican or American.

Replying to the first reason, I will ask you which war did Mr. Wilson keep us out of? Replying to the second reason, I will personally agree to introduce you, if you so desire, to not less than ten Americans who are now widows, whose husbands were killed by Mexican bullets. Replying to the third reason, I will agree to introduce you

## Majestic Coal Chute

Keeps the coal man from marring the sides of your home, protects your walk, flowers, lawn and shrubs. A glass door serves as a window, giving splendid light to the basement. It locks from the inside and is fireproof. It is extra durable, has a heavy steel body—semi steel door frame and boiler plate hopper. Every home should have one.

**Write for Free Book** Describing the Majestic Coal Chute and other Majestic products: Garbage Receptacles, Milk and Package Receptacles, all metal Basement Windows, Rubbish Burners, Street and Park Refuse Cans, Metal Plant Boxes, Pipe and Pipeless Warm Air Furnaces, etc.

The Majestic Co., 652 Erie St., Huntington, Ind.

to ten or more Mexican women whose husbands were killed by American bullets.

Not being at war, our army has no right in Mexico, but I will agree to show you an American army of over 10,000 men now on Mexican soil, which cannot be withdrawn without creating a contempt for Americans abroad for their failure to accomplish the purpose for which this expedition was sent to Mexico (viz., the prevention of bandit raids and the capture of Villa), all of which would have been accomplished had the original orders been allowed to be carried out.

J. W. HOIT

San Antonio, Texas

A Progressive Republican of California attacks the tariff and financial policy of the administration in the following fashion:

Applying the basic laws of political economy to industrial conditions in the United States, the Payne-Aldrich tariff law was an altogether righteous and holy law as compared with the present Democratic tariff. A tariff commission is a farce. Composed of an equal number of dyed-in-the-wool protectionists, and dyed-in-the-wool free-traders, it will be a game of give and take. In the mean time the manufacturers will not know twelve months in advance what to expect, or how to adjust their business.

The duty of the Republican party is to so adjust industrial conditions that the minimum wages paid to men and women in all employments shall be not less than four dollars a day. But it can't be done by subjecting our manufacturers to the competition of low paid foreign labor, or by allowing those already being paid abnormally high wages to make successful demands for still higher wages, as is now being attempted by one class of railway employees. With the wages of ten to fifteen millions of persons nearly doubled, think of the tremendous increase of their purchasing power, and the prosperity that would result.

The currency law which the Democrats consider one of their greatest achievements is one of the most subtle and deceptive measures ever enacted by any administration. It is an inflation law, and at the present time there is breeding one of the most acute and disastrous industrial depressions the country has ever known. It may not come for ten or fifteen years, but its coming is as certain as death and taxes.

Mr. Hapgood says, "He (Wilson) closed the door to predatory interests. In spite of many high-bred wails he reformed the currency of this country and thus shackled the money trust, so as to put business credit in the hands of the people where it belonged."

That is very funny. Mark Twain seldom excelled it. School boys and children know that bankers all over the country worked tooth and nail for the passage of the bill, or, according to the logic of Mr. Hapgood, did all in their power to forge shackles on themselves. The world has never known such remarkable self-sacrifice. Yet the law was not just as they wanted it. When the European war started, and United States securities in large quantities were to be returned here for sale, the bankers were frightened, or pretended to be, that a panic might result. Now let it be remembered that one of the chief benefits claimed for the new law was a prevention of panics. The bankers took advantage of the general alarm, made another run on Congress with certain amendments, begging for their adoption and thus forging more shackles on themselves. Of course a servile Congress and President granted their demands "for the good of the country." Then the shackling process was completed and the bankers were pleased and happy.

The truth of the matter is that the law unshackled them and gave them the freedom they had for years been wanting. They can now exploit the public without fear or favor. They have fixed things so a panic will not hurt, but on the contrary will benefit them. It will be decidedly different with

## All Kodak Film, now Speed Film

When we began the manufacture of "Speed" film it was decidedly faster than our regular N. C. emulsion. There were, however, some particulars, such as uniformity and keeping quality, in which it was more difficult to control than the old reliable "N. C." In order to protect our customers against film that might have deteriorated through age, we did not give it as long a dating as the N. C. film. We were inclined to make haste slowly.

In the Speed film, we had just what we claimed for it: "*speed*." In the N. C. film, which had a very different emulsion, we had beautiful gradation and absolute reliability. Gradually, during a period of six years, we have increased the speed of our N. C. film without losing one jot of its reliability, keeping quality or its fineness of gradation.

All Kodak film is now Non-Curling Speed film, both the Autographic, and the film that is wound in the old way without the autographic feature. Both are the reliable, dependable film—with added *speed*.

*Important to Amateurs.* Practically all negative emulsions (both plates and films) and Kodak film in particular, have a wide latitude *on the side of over-exposure*. This means, that while your pictures will be unsatisfactory if even a little under-exposed, they can have considerably more than the necessary exposure without the slightest harm. The moral is, of course, when in doubt take the choice of erring on the side of over-exposure. Kodak Speed film will help out appreciably by

giving better timed negatives than can be obtained with other films when light conditions are poor. On the other hand, the latitude is such that you can expose and should expose, under good light conditions, just the same as you always have with the regular Kodak N. C. film. It isn't intended that you should cut down exposures when using Speed film. It is intended that you shall get better negatives when working under adverse conditions—and you will.

*If it isn't Eastman, it isn't Kodak film.*

EASTMAN KODAK CO., ROCHESTER, N. Y., *The Kodak City.*

# Paul Claudel

THE glory of Paul Claudel has now blazed forth in France, while in Germany before the war his plays were studied by "Claudel societies." Writers who are by no means young have ranked him with the small company of the very great: Aeschylus, Dante, Shakespeare, Goethe; yet in England and America he is just beginning to be recognized.

It is not difficult to understand why he has not been better known to us. To love Claudel, one must be initiated. He has a speech peculiar to himself. His work, created by a solitary man, is not bound up with the troubles of daily life. Moreover, we have had no translation of his works available to those of us who are not bilingual.

Two years ago the first English translation of Claudel appeared. The Yale University Press then published "The East I Know" a translation of his "La Connaissance de l'Est," made by Teresa Frances and William Rose Benét. An English edition was issued simultaneously by their agents, the Oxford University Press.

This autumn marks the publication of the first of Claudel's plays to be translated into English. The Yale University Press again appears as the American publishers, while Chatto & Windus control the British rights. "The Tidings Brought to Mary," a translation of "L'Annonce Faite à Marie," made by Louise Morgan Sill, is heralded by the *London Nation* as "that rare thing, a piece of genuine literature."

To many of us it is interesting to know the daily life of a poet. Paul Claudel during office hours has been a French consul in the United States, in China (where he wrote the poetic essays, "The East I Know"), and in Germany, where he was stationed at the outbreak of the war. He returned to France with some difficulty and when last word came to his publishers he was serving in the Department of the Interior.

**"THE EAST I KNOW.** By Paul Claudel. Translated by Teresa Frances and William Rose Benét. Price \$1.25 net, postpaid.

**"THE TIDINGS BROUGHT TO MARY.** By Paul Claudel. Translated by Louise Morgan Sill. Price \$1.50 net, postpaid.

**Yale University Press**

209 Elm Street New Haven, Conn. 280 Madison Avenue New York City

all other business interests and the laboring masses. ASHLEY J. THOMPSON  
Alameda, California

As one of your oldest subscribers I desire to call your attention to a definition of true Christianity given by Mr. Hughes, almost two years before he was nominated for the presidency, in the course of a few remarks made by him at the thirty-fifth anniversary of the pastorate of Dr. Samuel H. Greene, pastor of the Calvary Baptist Church of this city. This was at a time when Justice Hughes was the 100 per cent judge, keeping politics absolutely out of his thoughts:

To have courage without pugnacity, conviction without bigotry, charity without condescension, faith without credulity, love of humanity without mere sentimentality, meekness with power and emotion with sanity.

THOMAS E. ROBERTSON  
Washington, D. C.

The Manager of the *Davidson College Magazine* corrects the statement of his biographer that Wilson did not complete his year at that college:

In the October 2 issue of *The Independent* which contains a very interesting account of the college days of Wilson and Hughes, President Wilson is not credited with finishing his college year at Davidson. Practically the same thing is found in Hale's life of Wilson.

According to the old college records in the library, President Wilson stood both the fall and the spring examinations.

R. H. RATCHFORD  
Davidson, North Carolina

Mr. Ratchford encloses the official record of Wilson's work at Davidson College which we print, for it shows that he was not content with the "gentleman's grade" of sixty and that he cannot be cited as one of the "bad boys" who turned out well:

In the fall: Excused absences, 2; logic and rhetoric, 95; Greek, 87; Latin, 90; mathematics, 74; composition, 96; declamation, 92; deportment, 100; average, 87.67 per cent.

In the spring: (On account of sickness) excused absences from prayers, 44; excused absences from church, 3; excused absences from recitations, 66; English, 97; Greek, 88; Latin, 94; composition, 95; declamation, 92; deportment, 100; average, 93.42 per cent; average for the year, 91.50 per cent.

Mr. Garvin, ex-governor of Rhode Island, calls our attention to Ashtabula:

In your editorial of September 11, entitled "If We Lived Longer," you ask a question which can be answered conclusively. Your question is: "Will any one tell us how, in the stress of business and professional life, we are to break away from our individualism or subordinate it to a sense of public responsibility if our economic system remains as individualistic in organization and in functioning as it is at present?"

The answer to your question is: The election of legislators must be made easier and more interesting. All of the political activity required of a voter should be the dropping of his ballot on election day. In that instant should be the power and the decision, uncontrolled by any boss or political machine.

Only one legislative body in the United States is elected by the proper method, and that is the City Council of Ashtabula, Ohio. In that city the names of all candidates are printed upon the ballot in alphabetical order, and the vote of no elector is counted for more than one person. In this way the seven members of the City Council are chosen by the seven largest groups of voters in the electorate. Nearly every voter is represented, and, with simple methods of nomination, each group will get its first choice.

## "A Train Load of Books" What Clarkson is Doing for the Book Buyer

IN several hundred thousand libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Sets artistically printed and bound—almost every book was bought from me. WHY? Because, I have no agents and sell you just the books you want—all new—many at saving of from 50 to 90 per cent—you examine the books in your own home for five days before paying for them. If not satisfied, return at my expense—and owe me nothing.

**Sample Prices:**  
Intercollegiate Dictionary. Pub. price, \$3.00. My price, \$1.20.

Boston Cooking School Cook Book. Price, \$1.38.

Here are De Luxe Sets, Morocco bound, complete works, many of them at less than 25 cents on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Stevenson, and scores of others.

### Get My Big, New Catalogue

My new catalog, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed. I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—and sell them for less money—than any other man in America. Every book new and fresh, and guaranteed to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

David B. Clarkson, The Book Broker,  
1108 Clarkson Building Chicago, Illinois

## Romeike's Press Clippings

are used nowadays by every modern up-to-date business man; they bring you in constant touch with all public and private wants, and supply you with news bearing upon any line of business. We read for our subscribers all the important papers published in the United States and abroad. If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE INCORPORATION

Your goods returned at our expense should our offer be refused in 10 days. Liberty Refining Co., 432 C Wood St., Pittsburgh, Pa.

## Motor Trucks

Any question concerning them answered without charge by The Independent's Motor Editor. Write him.

**LEPAGE'S  
GLUE 10°  
WHEN A NAIL WON'T DO**

Under this rational system of choosing representatives, our citizens, however busy and individualistic, will turn aside for the moment to perform their civic duty with the same ease and the same enthusiasm that fans have for a ball game.

LUCIUS F. C. GARVIN

Lonsdale, Rhode Island

The professor of Bethany College disclaims being hurt by President Wilson's reply to O'Leary:

Judging from your editorial, "From the Shoulder," in The Independent of October 9, more particularly from the last sentence, "We hope that it stung," you no doubt would like to hear how non-Anglo maniacs, whom President Wilson calls "disloyal Americans," are affected by the President's loss of his temper. No, it did not sting. We know too much of human nature not to know that President Wilson did what every one does when he knows he is wrong and can't meet opposing arguments, and nevertheless is too obstinate or unprincipled to change—he got abusive and degenerated into a common scold and lost his temper against those who dared to show him up publicly. No, such abuse does not sting. President Wilson, the most hyphenated American, the only President who ever sacrificed American interests to those of a foreign power, who alone tried to force a war upon us to help the land of his mother and grandparents, such a man is incapable of stinging any patriotic American who, not in words, but in deeds, puts America first. The whole incident simply shows to all those who know anything of human nature that the President knows he is wrong.

WALTER PETERSEN

Lindsborg, Kansas

In accordance with our custom to publish statements by all the presidential candidates we published in our issue of October 30 an article by Mr. Benson. From the letters we have received from Socialists we quote part of the best:

They come high, but a well regulated nation must have them, because they have them in Europe, and we are very extensively European in thought and action—as yet.

Parties Federal, Whig, Free-Soil, Know-Nothing, People's and others have strutted their little time on their several home-made platforms, and then passed into innocuous history. One has just died, succumbing to a four-year campaign at Armageddon; and we have the rare phenomena of incumbent legislators and executives, officially Progressive until certain dates next year, seeking election and reelection as the things they repudiated in 1912.

We have two large, if not great, historic parties; both representing the same general social idea; both repeatedly pronounced failures by the electorate, and both fully equipped with the nerve to again seek our suffrage and confidence, on the bases of old traditions and social outlook, and their mere historicity as political names and habits.

It has been repeatedly, academically and impressively, also prophetically, shown that the program and principles of the Socialist party "will not work." But it has proved in past and present experience that the program and theory of the old-line parties, here and elsewhere, have consistently and invariably failed to "work," if by that term we are to mean a business-like administration of industry, commerce, finance and social bookkeeping.

For, sad to relate but irrefutably true, they have ever represented the prehistoric idea of anarchistic social activities and relationships; while in mere police matters they are somewhat indifferently democratic or republican—a little of both.

The Socialist party, on the extreme other hand, is politically alone in its opposition to social anarchism; and, whatever conventional terminology it may use, more or less of necessity, it is found on careful analysis to be opposed to nothing else, es-

Will my  
complexion  
EVER be  
good again

Don't be discouraged  
*Resinol Soap*  
will improve your skin

Many and many a girl has a clear, healthy complexion today because some friend came to her with that sound advice, based on her own experience.

Resinol Soap not only is delightfully cleansing and refreshing, but its daily use reduces the tendency to pimples, relieves clogged and irritated pores, and gives nature the chance she needs to make red, rough skins white and soft.

Hands protected by Resinol Soap

rarely chap or roughen in cold weather. Used for the shampoo, Resinol Soap helps to keep the hair rich, glossy and free from dandruff.

If the skin or scalp is in bad shape, through neglect or improper treatment, a little Resinol Ointment should at first be used with the Resinol Soap, to hasten the return to normal conditions.

Resinol Soap and Resinol Ointment are sold by druggists and dealers in toilet goods everywhere. For a sample of each, free, write to Dept. 3-B, Resinol, Baltimore, Md.

WHAT THEY SAY:

"Forty Thousand Quotations is wonderful." Andrew Carnegie.

"I am simply amazed at the variety and usefulness of the contents." S. Parker Cadman, D. D.

"A monumental work, and a carefully organized treasury of mental, moral and religious value. I know of nothing like it, or approximating to it in practical helpfulness as a thesaurus of proverbs and phrases." Chas. H. Parkhurst, D. D.

SULLY and KLEINTEICH, 373 Fourth Avenue, New York

**GROWING OLD GRACEFULLY**

The key to health in old age is the *prevention* of bowel disorder.

Constipation, which becomes more and more chronic with advancing years, frequently makes the burden of old age seem heavy indeed. Yet in most cases constipation can be entirely prevented by a little care in the matter of diet and by supplying in Nujol an efficient substitute for the mucus which exhausted nature no longer provides.

Nujol is not a bowel stimulant. It acts as an internal lubricant, softening the contents of the intestines and so promoting normal evacuations.

Your druggist has Nujol. Avoid substitutes. Nujol is sold only in pint bottles bearing the Nujol trademark.

**STANDARD OIL COMPANY**

entially. It is also alone in the advocacy and promotion of a democratic administration, necessary on republican lines, of the common industry and commerce of the nation.

For, if to destroy the domestic market by the automatic depression of the wage scale, and the deliberate suppression of its advancement, is good business for a nation, then Socialism is foolish.

And if the formal search for alien markets for our native toil and resources, without a thought of the inevitable stock-taking of the coming centuries, nor for balancing values in imported goods or foreign service, is a practical policy for a nation, then Socialism is silly.

And if it is national sagacity to ignore available labor at all times as potential social capital waiting to be utilized for the social profit; and to regard it only as persons to be kindly helped or "furnished employment," or otherwise handled as a social liability, then Socialism, in its demand for the conservation of all life, material, machinery and skill, for the profit of all the people participating in legitimate lines of activity, is stupid, chimerical, visionary, as charged in past indictments.

The plea here is for political frankness and honesty, and may the better philosophy win.

A. GEORGE

Berkeley, California

Why vote for Woodrow Wilson?

I. He has high ideals

(a) Of his own duty. He is a hard worker. His acts and speech are such as become a gentleman.

(b) Of his *country's duty*—to be fair to our ill-tempered and unfortunate neighbors on the other side of the ocean as well as on this side, by refusing to take advantage of their momentary heat or misfortune. He counsels with them by appealing to their reason and sense of justice.

(c) Of his *country's rights*. He has, notwithstanding his fairness, insisted on the maintenance of our rights.

(d) Of his *country's mission*. He is a sincere believer in democracy in finance and industry, as well as in political matters.

He believes in our mission as a peace maker and is an advocate of the federation of the world and of a world court, backed by an international navy and army.

II. He is the most practical and progressive President we have had in generations. His leadership of Congress, his unification of his party, his well executed program of constructive legislation carried thru by forceful appeals to the reason of the legislators and of the country at large—all attest to this.

III. His opponents are *not unified*, do not advocate any program of constructive statesmanship, vaguely hint at war with our neighbors, and show not so much desire to advance high ideals, as to obtain mere political ascendancy.

AMBROSE CORT

Principal, P. S. 73, Brooklyn

As if we did not have troubles enough on the European side a correspondent from China warns us of a new Asiatic peril:

In the drainage of capital from the United States and its application to the development industrially of countries affording cheap labor and raw material lies the greatest menace to future prosperity; the body politic, industrial and economic. Have we a statesman to vision and forefend?

GEORGE A. STEVENS

Tientsin, China

Wife—John, there's a burglar down stairs!

Political Candidate—Go down, and entertain him. Tomorrow's election!—Pack

It is very nice to think

That the our country's on the blink

There is no lack of noble men

Who yearn to set it right again

—R. W. H. L. in New York Tribune

## PEBBLES

Germany is said to have offered Russia a separate peace—a gift of Turkey for Thanksgiving.—*Toronto Globe*.

Kaiser (to Count Zeppelin)—Tell me, Count, why didn't you invent something useful, like the "Tanks"?—*Punch*.

If Constantine ever loses his job as king he ought to be able to make a good living as a cabinet maker.—*Boston Transcript*.

France reports fairly good crops, but the drawback is that so large a part of them is gathered by the Germans.—*Springfield Republican*.

If the woman's party really raises a campaign fund of \$1,000,000, it ought to prove to most politicians that women have a right to the franchise.—*Milwaukee Journal*.

Eavesdropped: "What's all this talk about the fourth dimension?" "The fourth dimension? Oh, that's a term they apply to journalism."—F. P. A. in *New York Tribune*.

Major-General Turner, of the British Army, says Hindenburg has little brains. That's a good deal harder on Hindenburg's antagonists than on Hindenburg.—*Charleston News and Courier*.

"Have you been studying science of the efficiency?"

"Yes; had to quit reading about it. Got so interested that I found it was interfering with my regular work."—*Washington Star*.

"You have been accused of being a prevaricator."

"Well," replied Senator Sorghum, "that sounds hopeful. The fact that they selected so delicate a word indicates that somebody is afraid of me."—*Washington Star*.

When I went in, with ghoulish glee,  
To cast my vote, they handed me  
A ballot at the door.

Alas for all my lofty aims:  
The ballot carried many names  
I'd never seen before!

—R. W. H. L. in *New York Tribune*.

It happened at a little town in Ohio. A visiting Easterner stood on the veranda of a little hotel there, watching the sun go down in a splendor of purple and gold.

"By George!" he exclaimed to an impassive native lounging against a post. "That's a gorgeous sunset, isn't it?"

The native slanted his head a little and looked critically at the glowing west.

"Not bad," he drawled. "Not bad for a little place like Hoopville."—*Kansas City Journal*.

The River Clyde has been brought up to its present navigable condition by means of dredging, and the Glasgow people are very proud of it. One day a party of American sightseers turned up their noses at the Clyde.

"Call this a river?" they said. "Why, it's a ditch in comparison with our Mississippi, or St. Lawrence, or Delaware."

"Aweel, mon," said a Scotch bystander. "You've got Providence to thank for your rivers, but we made this ourselves."—*Brooklyn Citizen*.

"But darling," said Bertie, "how on earth shall we live? You know, I've got absolutely nothing—nothing at all."

"Oh, that's all right!" murmured the beautiful baby doll. "I'll fix dad, and he'll see us thru."

Dad gave in, and the day was fixed. In church, on the happy morning, Bertie cried in a deep baritone:

"With all my worldly goods I thee endow."

Then a low chuckle came from the bride's father.

"My goodness!" he exclaimed, in tones audible throughout the church. "Hanged if he isn't throwing in his cigar case!"—*Answers*.

What lies back of the brilliance of a MAZDA lamp? All the facilities of the world's greatest lamp makers supporting the standards set by MAZDA Service. ::

# MAZDA

"Not the name of a thing,  
but the mark of a service"

### The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

## The Sage of Potato Hill

ED. HOWE'S THOUGHTS  
ON MEN, WOMEN  
AND THE WORLD

**R**EADING is like hunting: for hours you tramp the dull fields, when suddenly there is a flight, and an exciting moment. . . .

I was reading a book recently by Professor J. Arthur Thompson, and suddenly ran into this: "*The hazy medium of words wherein we all drown.*" . . . Fault has been found with the epigram: it is charged that the epigram is always an exaggeration; often a lie: that an epigram may be manufactured on either side of any question, but here is one that is clever, true, and worthy of thought. . . . When a man says, "I see in this an indefinable beauty; a truth that cannot be exprest," etc., he is indulging in the hazy medium of words wherein we all drown. Beyond what may be exprest and demonstrated, there is a great field wherein anything may happen, if proof is not insisted upon. It is the refuge of the sentimental, lazy dreamer. The unfair man flies to this refuge with his side of the story; a story he cannot demonstrate in presence of the opposition. In this hazy medium of words, adults make pretenses in the serious affairs of life as boldly as children play the game called "Pretend." If an adult says an angel conversed with him, and you reply: "I am glad you know such a thing is possible, for I had exactly such an experience," he cannot deny your statement, nor can you deny his: between you, a cult may be founded.

A gentleman in Oregon writes me concerning a modest writer of the present day: "He has a quaint, honest, simple style that differs from the style of any writer I know. It swings the reader to him; especially the old boys like ourselves, who know the world pretty well." . . . As a rule, no one is able to fully understand what he reads until he has passed, say, forty; I am just beginning to understand certain of the masters of literature, and I have passed sixty. It is not so much a matter of intelligence as it is experience; and the results of experience do not begin to ripen until the body has completed its growth: somewhere around forty. . . . It is said John Ruskin began disputing with his elders at ten or twelve. He was a very impudent lad: what he knew was out of the books, and he did not properly understand it. . . . The great question is, "How old is he?" . . . A young man

## Temperature Right Day and Night

This device maintains exactly the desired temperature both day and night, while a simple adjustment of the clock attachment will enable you to secure automatically and silently at set hours a lower temperature during the sleeping period with a return to warmer temperature at the time of arising.

is better than I am; but there will never come a time, as there has never been a time, when old age does not know more of the serious lessons of life than the young. . . . Heaven knows I intend this statement modestly. I mean no more than this: If I have traveled a road many times, I know it better than my son, to whom the road is new.

In a field of eighteen acres, a farmer in the State of Washington raised an average of one hundred and seventeen bushels of wheat per acre. The average over the United States is seventeen bushels. If that farmer has a right to raise more wheat than the average, then any other man has a right to prosper more than the average.

Dr. William J. Robinson, editor of a medical publication, says: "Magazine writing is essentially dishonest writing. To be a success as a popular magazine writer, you must first of all paint in lurid colors, you must disregard or minimize facts which are contrary to your thesis, and you must speak with the aplomb and finality of judgment which admit of no discussion, as if your statements were accepted universally by the scientists of the whole world. Such articles appeal to the public, and are therefore sought by the editors. But write a moderate article, without epigrams and exaggerations, honestly presenting the present status of the subject, explaining that certain points are still in doubt, that authorities of equal competence entertain opposite views about it, and the chances are ten to one that your article will be rejected." Successful magazine writers cannot be intellectually honest. We do not know a governor of a state, the president of a college, or the occupant of any other big position, who is. Every man in business finds it necessary to be an intellectual coward and suppress his honest opinions; Every man has private opinions, the result of his honest thinking, he dare not assert. The pretenders map out foolish programs, and the people, who are also pretenders, accept them.

How many of the population are mere drags on the community? Probably no one knows, altho the number must be very large. But of all the useless men, seven-tenths are found in the towns, since farmers are usually able to make at least a living by natural means.

Education is only a part of ability; sometimes it has almost nothing to do with it. Henry Ford is a very able man, in his chosen field; and he has almost no education.

It is often said there are only a dozen jokes, and that all merriment is founded on them. This is true, also, of philosophy, art, history, religion, music, politics, love; there are a dozen principles in each on which all the rest is founded. A man might write his Bible

## GENIAL WARMTH

In an attractive home is not merely a matter of temperature. It is the rich, warm-looking decorative scheme which contributes so much to the "homey" atmosphere on a chilly night.

Woodwork is the keynote of interior decoration. Dark warm tones, or dainty white enamel enhance winter comfort in every home where they are used, providing the wood upon which they are put possesses qualities which insure life and luster to the finished surface.

## ARKANSAS SOFT PINE

supplies every requisite for the accomplishment of these effects and moreover, has the additional advantage of moderate cost, due to an abundant supply.

We have a very attractive homebuilders book containing detailed information and eight colonial home designs drawn exclusively for us. The book and finished samples will be sent free on request to those seriously interested. Architects should have our manual on file. Write for it.

in a dozen paragraphs and have a perfect rule of conduct.

Whatever you intend giving the poor, give in cash: they have enough good advice.

There will be a good deal of talk this winter about Henry Martin, of Potato Hill. He has separated from his wife, and gives no other excuse for it than that her dry goods bills annoy him. "She buys extravagantly," he says; "and I don't like her clothes, but can do nothing with her. I do not propose to be annoyed all my life by this foolish thing, so we have separated, and I have given her half our possessions. It may be that a woman requires these things: that my opinions are only male unfairness, but anyway I'll never again be connected in any way with a dry goods bill."

Every one abuses the practical man: we all love to say he overrides ideals, and all good feeling; that in grubbing for edible roots, he sees no flowers upon the earth, no stars overhead. Practical men are actually responsible for the great advancement in floriculture; they have not only seen the stars, but told us all we know about them. Practical men, the money makers, are the greatest patrons of the arts and sciences: most colleges and art galleries exist because of endowments from men who understand the ugly as well as the beautiful things. The men of great learning did not build the universities in which they teach; but nearly all of them unjustly criticize the men who did.

There is a class of books never seen at the book stores; books privately printed and written by authors who do not meet the requirements of publishers. I find these books interesting. They are natural, if lacking in the literary polish of professional authors, and many of them are well written. I can at once detect the weakness of such a book: the author has some intense notion that other people do not entertain. That which he believes to be the greatest thing in the world, is of no real importance; but his writing about it interests me. It reveals the character of the author, at least, and character is the most interesting study.

Potato Hill women are telling of a town woman who paid \$18 for a new fall hat, without a murmur, and made a great protest because her washerwoman wanted an advance of twenty-five cents a week.

All of us are apt to say, "This is a wonderful world; and I am a wonderful man." . . . I have had no part in the wonderful things we all point to with pride; a good many others have not.

In nothing have you a right to say that what pleases you must also please me.

# DEAF?

Let Me Show You That You Can Hear!

Don't say that it cannot be done—. Had Mr. Bell said that, there would have been no telephones. I have shown over 265,000 deaf persons that they can hear distinctly and have thousands of grateful letters from them, mainly because I said to them what I now say to you—"My company does not want a cent from you until you know that the Acousticon will make you hear." Just send a line and say "I will try the Acousticon." We will immediately send you, charges paid, the

## 1917 Acousticon for

No Deposit **FREE TRIAL** No Expense

After you have given it any test that you choose, it is entirely for you to say whether you will keep or return it—at least you will know whether you are among the hundreds of thousands of fortunate ones to whom it does restore normal hearing. And it will have cost you nothing to try—not a cent.

**WARNING!** There is no good reason why everyone should not make as liberal a trial offer as we do, so do not send any money for any instrument for the deaf until you have tried it!

The ACOUSTICON has improvements and patented features which cannot be duplicated. So no matter what you have tried in the past, send for free trial of the ACOUSTICON today and convince yourself—you alone to decide. Address me personally if you prefer. K. M. TURNER, Pres.

# MOTOR PROGRESS

By  
John Chapman Hilder

**M**ANY requests have come to me for information regarding motor trucks. The majority of these requests, however, have given me no data on which to base my replies. There are so many different kinds of trucks, fitted for such a wide diversity of uses, that in order to obtain intelligent advice, inquirers must tell me certain facts concerning their businesses. Choosing a motor truck, or a fleet of motor trucks, should not be rushed into pell mell.

In a paper recently read before the Mid-West section of the Society of Automobile Engineers, Mr. Henry Farrington, a member of the society, took up the matter of choosing a motor truck and said so many things of interest that it seems to me I can do no better than to quote some of them:

"Some people buy motor trucks because they are necessary to open up new territory to trade, or to keep in touch with old customers who are moving away from trade centers in rapidly growing cities and towns. Others buy because they have to meet the superior transportation competition of their trade rivals who have already adopted machine delivery. Still others use trucks for their advertising value, mainly as an outward and visible sign of commercial worth and prosperity."

*"The really good business man, who is not sold on promises and does not buy on price, will make a very careful analysis of his transportation needs before investing in motor trucks."* The italics are mine.

"In the final analysis the purchase of a motor truck by men of this class reverts to the purchase of transportation at so much a ton or a mile, and the ability of the machine to do economically and profitably the work in question. Before a business man buys a motor truck he should convince himself that he is not merely buying a machine. He is buying transportation for the period represented by the useful life of the machine, and when he pays over the money to the salesman or dealer, he is merely paying the first instalment on a big transportation investment. The rest of the investment is paid every day in operating costs during the total useful life of the truck.

"Take, for example, the service value of two trucks, both of two tons' load-carrying capacity, but one costing approximately twice as much as the other. Assuming that in a motor truck, as in most other classes of merchandise, the buyer gets what he pays for, it is fair to make the statement that the mate-

# STEINWAY

THE moods and fancies of youth find sympathetic understanding in the sensitive mechanism of the Steinway. In the early years of musical effort, attainment seems so difficult and so far away. It is then there is vital need of just the encouragement which the Steinway never fails to give.

Its superior worth is accepted throughout the world without question. Yet the Steinway's cost is moderate, and terms are made convenient. Write for illustrated literature.

rials and workmanship entering into the construction of the higher-priced truck will be better than in the other. In this case the effect would be shown in the running costs and useful mileage life of the trucks.

"If the higher-priced truck averaged 60 miles a day for a total useful life of 2000 working days, and cost \$12.50 a day to operate (including overhead, wages, running expenses and depreciation), the total transportation investment would be \$25,000. Based on the writer's experience in a fairly typical case involving the use of a large number of trucks, the cheaper machine might cost \$29,480 during the same period, or at the rate of \$672 a year more than the other, averaged over the total life of the truck, and this does not take into account the annoyance and expense of the delays due to the greater repair and maintenance problems of the cheaper machine.

"It must not be assumed from this that the cheaper truck will be a losing investment. On the contrary, in most cases it will prove to be a very profitable investment as compared with animal transportation. At the present stage of motor truck development there will undoubtedly be sold more trucks of the \$1500 class than of the more expensive types.

THE business man who has made up his mind to adopt commercial motor vehicles for the first time, is confronted with a maze of conflicting practice in engineering, body design, load-carrying capacities and prices, as well as of the more or less successful and seemingly contradictory experiences of business men in general and of those in his own line in particular. He is certain to meet a lot of motor truck salesmen whose reasoning and arguments agree only on the advisability of using motor trucks, and differ largely on the other essentials. He will meet salesmen who will tell him the worm drive is the only thing. Others will insist that the double-side-chain drive has never been improved upon. The internal-gear drive and the double-reduction axle also have their champions. The men who are selling motor trucks with power applied to all four wheels will claim that the rear-drive truck is doomed and is already obsolescent. And here and there will pop up another type of final drive differing from any of the others and claimed in all apparent sincerity to be the last word in motor truck design.

"The merits and demerits of two-four-, and six-cylinder engines will receive their fair share of attention. Clutches, transmissions, differentials, brakes, wheels, tires, governors, radiators and numerous other details of design will be freely discussed, and the various designs will be praised or condemned, according to the beliefs of the contending salesmen, or their anxiety to make a sale.

"The truth of the matter is that these things are absolutely unessential except in so far as they may affect the applicability of the truck to the job in question, and the profit the machine can make in

## At the Rainbow's End

is Nassau-Bahamas, a quaintly foreign colony, wonderfully rich in the romantic strangeness and astounding color of the Tropics.

From December to April the climate is that of June, while but a short distance away, cities in the United States are being racked unceasingly by storm.

Wouldn't a month or two in Nassau with its marvelous surf bathing, big game fishing, tennis and golf—be a holiday to remember?

Wouldn't you come home wonderfully "fit"?

Write today for "Nassau-Bahamas" and Hotel, Boarding House and Furnished Villa Register. The time to go is this winter, and the time to plan is NOW.

## 1850 THE 1916 UNITED STATES LIFE INSURANCE CO.

In the City of New York issues Guaranteed Contracts

JOHN P. MUNN, M.D., President

Finance Committee

CLARENCE H. KELSEY

Pres. Title Guarantee and Trust Co.

WILLIAM H. PORTER, Banker

EDWARD TOWNSEND

Pres. Importers and Traders Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to their own commission, a renewal in their old age, or for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

comparison with other modes of transportation it is intended to displace." Once more, the italics are mine.

"The engineering features and design do not make a great deal of difference so long as the truck will do the work in hand profitably and uninterruptedly. If a business man is hauling goods in a territory where all the roads are good all the year round, he has an unrestrained choice of almost all the trucks that may be offered to him.

THE types of engine, final drive and other details are not particularly essential, except as they influence the price, the profit or the perpetuation of investment. The purchaser will be wise to check up one truck against another on each of the following points:

1. Actual developed horsepower per pound of total weight carried and given maximum speed.
2. Total weight carried per inch of tire width.
3. Proved gasoline, tire, repair and maintenance costs per mile under given conditions.
4. Accessibility of the various parts of the truck for inspection and repair.
5. The cost of repair parts.
6. The capacity of the dealer or manufacturer for supplying repair parts indefinitely and without loss of time during the probable life of the truck.
7. Workmanship and quality of materials in the units of the truck, considered in regard to the work they have to do.
8. The total weight of the truck chassis to carry a given load, including the body weight allowance.
9. The type, design and quality of the body to carry the goods in question, including the effect these have on the safe carriage of the goods and the ease and quickness of loading and unloading.
10. The commercial worth and reputation of the truck manufacturer.
11. The price of the truck.

"The above given items are not necessarily arranged in order of importance, except the last. Unless the amount of money available for the purchase of equipment is limited by financial considerations, the price of the truck should be the last thing to be taken into account. All the other items undoubtedly come before it."

The truck should be chosen to fit the work. With this point in mind, won't you please tell me all about the work to be done, when you write me for advice as to choosing a truck? You will help me help you by stating your problem in the fullest possible detail.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product.—Address Motor Editor, The Independent, 119 West 40th Street, N. Y. C.

## Why Pay Full Prices for Diamonds

It's not necessary, says an institution of over 60 years unimpeachable business record.

It costs you nothing to see for yourself—and no one need know your business. Get Our Bulletin and read about hundreds of bargains—diamonds—and at 40 to 50 per cent off market prices.

### Diamond Banking

We must sell the high-grade diamonds on which we originally loaned money. It is the plan of any bank to sell the security if the loans are not repaid—the buyer gets the benefit.

### Try to Match These Values

## MARKET PLACE TALKS

BY LUIGI CRISCUOLO

### PREFERRED STOCKS AS DESIRABLE INVESTMENTS

THESE are two extremes in the realm of investment; one is the very high grade bond yielding 4 per cent, while the other is the highly speculative common stock yielding 8 per cent and more. A sort of compromise exists between the two, combining some of the safety accorded to bonds and the speculative element possessed by common stocks, yet enjoying withal a ready market and attractive yield. We are dealing with preferred stocks of railroad and industrial corporations having a successful history.

Preferred stocks have a claim on the earnings, and in many cases, on the assets, of a corporation junior to that of bonds, notes or other obligations, but senior to the claims of common stockholders. Good preferred stocks usually represent real assets and not mere "good will" or prospective earnings, as in the case of many common stocks. The provisions governing their issuance vary considerably; as a rule, holders of preferred stocks are entitled to receive payment at par, or at a fixed figure above par, in the event of liquidation, and the balance is distributed pro rata to holders of common.

Dividends on preferred stocks may be cumulative or non-cumulative, and preferred stockholders may participate in surplus earnings after common stockholders have received a fixed rate. The preferred stock of the Chicago & North Western Railway Company is entitled to 7 per cent, after which the common gets 7 per cent, then the preferred receives 3 per cent more, the

common 3 per cent more; finally both issues share equally in future disbursements. This company is paying at the rate of 8 per cent on the preferred and 7 per cent on the common.

The cumulative feature possessed by a preferred stock assures the payment of accrued dividends on that stock before any disbursement can be made on the common. However, there are a number of industrial concerns which are now being re-financed, which have large amounts in back dividends on their preferred stocks that will probably never be paid in cash because of those companies' relatively poor financial condition. With weak concerns, the cumulative feature often proves to be a distinct disadvantage.

Preferred stocks sell on a higher plane than common stocks, because of their wider margin of safety, excepting in cases where earnings are so large that the higher rate of dividend paid on the common raises it to a price level far above that of the preferred. However, large earnings may be, or may not be, abnormal, and it is on the fact that dividends must first be paid on preferred stocks that the desirability of these stocks depends.

In late years the safety of preferred stocks has been safeguarded by various provisions tending to restrict the issuance of additional stock or the creation of obligations prior to such stock—as bonds, debentures or notes. Some of the safeguards adopted are given herewith:

1. Unissued preferred is to be sold for cash at not less than par and only

when net earnings, after depreciation and reserves, are at least twice the amount of dividends on all preferred stock, including that to be issued.

2. The amount of preferred cannot be increased, nor shall any stock having preference thereto be issued unless with the consent of holders of 75 per cent of the outstanding preferred.

3. Preferred stock is entitled to full par value and accrued dividends in the event of dissolution or liquidation before any disbursement shall be made to common stockholders.

4. If dividends shall be in default for over one year, holders of preferred stock shall be given power to vote at the next meeting of stockholders. In many cases holders of preferred stocks have equal voting power with common stockholders.

5. A sum equal to 1 per cent of the preferred stock outstanding shall be set aside on each January 1st and July 1st for the purpose of purchasing such preferred stock at not exceeding 110, which stock shall be cancelled. This retirement fund is to be set aside in each year before any dividends may be paid on the common stock.

6. The full-paid common stock must always be twice the amount of preferred stock outstanding. No dividend can be paid on the common until two years' dividends on the preferred stock have been set aside from earnings.

In some cases preferred stocks have been made particularly attractive by providing a feature by which they could be converted into common stock at par or thereabouts during a specified period. The value of such a feature is proven at a time when abnormal earnings result in large dividends on the common stock; the preferred dividend is fixed, but the preferred can be converted into common, which can be sold at a price materially higher than the original cost of the preferred. The profit is obvious.

Preferred stocks of seasoned corporations are in a particularly desirable position in periods when earnings are abnormally large, as at present, and corporations are spending considerable amounts for improvements and replacements, as well as for dividends on common stocks. There has been a tendency of late years to set aside large sums for depreciation or improvements, which creates a substantial equity behind preferred stocks that makes them all the more desirable.

In the event of a business depression, preferred stocks will be affected, as they have been in the past, but concerns that have paid dividends without interruption for several decades, through panics and depressions, are quite likely to maintain their record for many years hence. Corporations that have benefited by the prosperity now current are strengthening their financial condition, paying off floating debt and retiring issues of bonds, all of which places their preferred stocks in a stronger position.

It must be borne in mind that in

## The Investments of One Elderly Woman

*Many investors prefer to purchase securities diversified in dates so that a payment of interest is made every month. Nineteen years ago we selected an investment of this character for an elderly woman, entirely dependent on the interest from her securities. Now, on her death, her daughter has written us, expressing the satisfaction the mother always felt in the fact that two-hundred and twenty-eight payments of interest had been made her without a single day's delay, that her principal sums had always been offered her in cash on the days when due, and that they had always been reinvested through us without the loss of a day's interest.*

**T**HIS true story of sound securities sold and service faithfully rendered may be an example to thousands of persons in search of really safe investments, and of the thorough-going service that is rightfully to be expected of the 20th-century bond House.

Our history of 34 years is full of such incidents, arising from the facts that we deal in only the safest class of investments and that no investor has ever lost a dollar on any security purchased of us.

We are now offering a well diversified list of safe first mortgage bonds. Each issue is secured by a building and land in New York, Chicago or some other large and prosperous city. Each has been protected by the definite system of safeguards which we have developed in our 34 years of experience, known as the *Straus Plan*.

It would be to your advantage to investigate these bonds. Our current Investment List, describing a variety of issues, and our booklet telling how they are safeguarded, will be sent on request.

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

## Insurance

Conducted by

W. E. UNDERWOOD

### THE VALUED POLICY

A correspondent has asked me for a brief explanation of the "valued policy" in fire insurance. To begin with, there is no such policy. All fire insurance policies today are "standard"; that is, prescribed by statute. But I know the point on which he is seeking light. In about one-half the states—all but one of them, New Hampshire, in the West and South—there are in existence what are called "valued policy" laws. Tho they differ in phraseology, all of them aim at the same result. Except in one or two states these laws apply exclusively to insurance on buildings, or as some of the texts read, "immovable property." They provide that in the event of fire destroying the insured building, the insurer immediately becomes liable for the full amount written in the policy. Now that provision is a violation of the standard form of policy, in which the sum insured appears only as the outside figure of the insurer's liability, the actual amount of loss to be ascertained by investigation after the fire. Of course, if the investigation shows that the damage equals or exceeds the amount stated in the policy, the company pays a total loss. If the values destroyed aggregate less than the face of the policy, only that amount is paid.

### COÖPERATIVE ASSOCIATIONS

There are a number of coöperative associations in this country furnishing personal accident and health insurance. They are generally organized in the interests of particular classes. The administration expense is small; there are no agents, such new business as they write being introduced by the existing membership. The premiums are in the form of monthly or quarterly assessments. Compared with the policies issued by the stock companies, the "coverage" provided by the certificates of these associations may be described as restricted. The benefits under them are neither as numerous nor as broad. This is not saying they are not worth the premium paid for them. They are full value for the benefits granted, always provided the association is in sound financial condition and carefully managed. But the point aimed at here is that insureds must not expect for \$9 or \$12 a year from any set of insurers the same benefits which cost \$20 to \$60. In insurance, as in other lines of business properly organized and capably managed, one generally gets what one pays for.

# BOTH SIDES

# A DEBATE

## COMPULSORY ARBITRATION

*RESOLVED, That a compulsory arbitration law should be enacted to settle all labor disputes on railroads and other common carriers.*

**T**HE threatened railroad strike this summer, the hasty passing of the Adamson bill and the recent street railway strikes in New York City have aroused much discussion of the means of settling labor disputes on common carriers to avoid interference with the rights of the public. The "Van Hise" board, a voluntary arbitration board appointed in 1912 to settle the threatened engineers' strike of that year, went on record in favor of a compulsory arbitration law, similar to those of Canada, Australia and elsewhere. This brief was prepared by Edith M. Phelps.

### AFFIRMATIVE

I. Compulsory arbitration in railroad disputes is logical and right in principle.

A. The rights of the public must be considered. 1. The public bears the costs of the strike and of increased wages, either in higher rates or in poorer service.

B. The railroads and their employees should be regulated as servants of the public.

C. Some form of peaceful settlement must always follow a strike—why not precede and avert it?

D. Compulsory arbitration is a civilized method as opposed to force which impoverishes labor and imperils the social order.

II. Mediation or voluntary arbitration is unsatisfactory.

A. It always results in a compromise.

B. Awards are not based on justice but on what must be granted to prevent the strike.

C. Temporary boards cannot gain a sufficient knowledge of the facts to decide intelligently.

D. The demands of the workers increase continually.

III. Compulsory arbitration is practicable.

A. It could be enforced. 1. It would be constitutional. 2. Strikes would be made illegal. a. In case of a strike the funds of the union could be attached. b. Legal penalties such as fines and imprisonment could be inflicted if the injunction against a strike were disregarded.

B. Awards of a permanent board would be final.

C. Time and labor spent in an effort to bring both sides to an agreement could be minimized.

D. Appointments to such a board could be made free from political interference.

IV. Compulsory arbitration a great social and economic gain.

A. Coöperation and amicability would supplant strike enmity.

B. Suffering, inconvenience and waste avoided. 1. Work and wages would continue. 2. Profits would not be cut. 3. Service would not be interrupted nor would the public security be threatened by strikes.

V. Plenty of precedent for a compulsory arbitration law.

A. In the United States. 1. Agitation by the workers for mediation and arbitration as substitutes for strikes has continued since 1858. 2. A number of national unions require effort to arbitrate

before strike is called. 3. Railroad managers generally in favor of it. a. The managers were willing to arbitrate the railway dispute of this summer. 4. A compulsory arbitration law in Colorado has been successful.

B. In other countries. 1. Compulsory arbitration laws successful in Canada and Denmark. 2. A similar law has worked well in Australia. 3. The New Zealand law, tho in some respects unsatisfactory, has never been repealed. 4. A law for compulsory investigation and award, the force of which shall be binding, has recently been enacted in Norway.

VI. The fact that an award may not always be just is no argument against compulsory arbitration.

A. The aim should be to adopt and improve, as far as possible, methods that seem reasonable.

VII. A compulsory arbitration law would have prevented the Adamson bill from becoming a law.

VIII. A compulsory arbitration law would have prevented the street railway strike of New York City.

A. The managers could have been compelled to arbitrate.

### NEGATIVE

I. Compulsory arbitration is wrong in principle.

A. It depends upon the compulsory enforcement of the award, which does away with the right of the workingmen to strike.

B. This right should not be abrogated as long as the worker is not economically free. 1. The pressure of the laborers must be steady against the employers until reasonable standards of living wages, living conditions, etc., have been secured for them.

C. The public has no right to interfere in private business.

II. Compulsory arbitration is not needed to prevent strikes.

A. Every railway labor dispute that has threatened the interests of the public seriously has been settled either by conciliation or by voluntary arbitration. 1. Legislation already exists providing for the voluntary settlement of labor disputes.

B. Both the railroad employers and the employees are anxious to avoid strikes.

C. What is needed now is that both sides take time for the dispute to be thoroly investigated and for the public to make up its mind.

D. If living and working conditions were made right for the laborers there would be no desire to strike.

III. Many of the subjects of dispute are matters of principle.

A. A principle cannot be arbitrated.

IV. Compulsory arbitration is not practicable.

A. It has not been successful where it has been tried. 1. Strikes have occurred both in Australia and New Zealand since the compulsory arbitration law has been in effect. 2. These countries present conditions especially favorable to the working out of such a law. 3. The Canadian plan fails to provide sufficiently expert service for judging the cases which come up.

B. Compulsory arbitration could not be enforced. 1. It would be impossible to

imprison or to collect fines from large numbers of workers. 2. Substitute labor could not be had. The work requires experience.

C. It would result in inefficiency. 1. Involuntary labor is always inefficient.

D. The awards of a compulsory arbitration board could not always be based upon absolute justice.

V. Little sentiment exists in favor of compulsory arbitration.

A. Organized labor is opposed to it. 1. Distrust always prevails as to the fairness of the award. 2. The Industrial Workers of the World and the Socialists oppose it in principle.

B. The employers are not generally in favor of it. 1. Many of them feel that the causes for dispute are not matters for arbitration by a third party. They feel that they have a right to deal with their own workers as they see fit. 2. In the street railway strike in New York City it was the managers who refused to arbitrate.

C. Both sides hesitate to give power to those who they feel do not understand the conditions.

VI. A compulsory arbitration law would result in dissatisfaction.

A. The awards would be too much like the decisions of a court. 1. Each side would feel the pride of winning or the sting of defeat too keenly.

B. The ill feeling between capital and labor would be increased. 1. The experiences of Australia and New Zealand show this result.

VII. It would tend to increase the number of disputes.

VIII. If the right to strike were removed the workers would be forced into politics to protect their interests.

A. Without the power to strike quickly they would be intimidated and the advantages of union nullified.

IX. The passage of the Adamson law is proof that a compulsory arbitration law is unnecessary.

A. The passage of this law was really an abandonment of the principle of arbitration.

B. A law passed by Congress has the binding force of the award of a compulsory arbitration board.

### J U S T A W O R D

Another of Edward Earle Purinton's Efficiency articles "to help you help yourself" will be published in The Independent for November 20. "Everyman's Office" is the subject and Mr. Purinton explains how it can be made "the ante-room to professional or industrial success."

Few of the Germans who would prove the Fatherland the greatest benefactor among nations have gone so far as to laud what Germany has done for England. But an Englishman—P. A. Vaile, author of "Wake Up, England!"—makes the assertion in an article soon to be published in The Independent that "England's best friends are the Germans," and he backs it with interesting facts and convincing arguments.

Who's Who calls him an artist, but Everett Shinn makes steam engines, melodramas, furniture and gowns, as well as painting scenery and pictures. "Versatilist" is the title Donald Wilhelm gives him in his entertaining description of the man who believes that "There's nothing left out of any of us. We can all do anything, in our measure." Mr. Shinn has drawn a picture of himself to illustrate the story of his work, to be published in The Independent shortly.

The Independent has always been proud of its verse, both in quality and quantity decidedly above the average of a weekly magazine devoted primarily to current events. And just at present that pride has particularly justification in half-a-dozen poems, all scheduled for early publication. The authors' names speak for themselves. Helen Parry Eden, contributor to London *Punch* and author of "Bread and Circuses," has written for The Independent a poem of what the war means to "A Mother in England." "The Seeker After God" is a sonnet by Harry Kemp, William Rose Benét, author of "Merchants from Cathay" and "The Falconer of God," wrote "Summer Night from an 'L' Platform" for The Independent of July 24, 1916. "Sophistication" is the title of his new poem. "The Wife," by Marguerite Wilkinson, and "Meadow-Balm," by Winifred Welles, are two more of the poems which we are glad to publish by former contributors to The Independent. But perhaps the most notable of the list is "The Shaft," by Wilfrid Wilson

Gibson, a young English poet of distinction. Much of his verse, now published in his book "Battle and Other Poems" originally appeared in The Independent.

### REMARKABLE REMARKS

JOHN REDMOND—Ireland is suffering from a brain storm.

EMPEROR WILLIAM—Hold out. The Lord will give his blessing to the end.

MRS. CHARLES E. HUGHES—Every child has a right to enjoy its childhood.

KING CONSTANTINE—There is a desire to sow discord in the royal family.

KING WILLIAM OF BATTENBERG—May God give a speedy and honorable peace.

CORRA HARRIS—Being a man at all is in itself a very suspicious circumstance.

PROF. M. V. O'SHEA—Many an adult is ill at ease in a group of young people now.

GENERAL VON HINDENBURG—Great strategists are lacking among the British.

RUDYARD KIPLING—What mystery is there like the mystery of the other man's job.

SECRETARY MCADOO—We can't shoot our way into the good will of the Mexican people.

LORD ROSEBERRY—In some irresponsible quarters I hear some babble of immediate peace.

CHARLES WARREN FAIRBANKS—It is not true that President Wilson has kept us out of war.

ED. HOWE—Charley Chaplin has been a hero several years and it is time for a change.

E. H. SOTHERN—What tight rope artist would be content with only a balance at the bank.

REV. DR. WILLIAM MANNING—Our Lord Jesus Christ does not stand for peace at any price.

GENERAL BRUSILOFF—Artillery plays in modern war a role not only enormous but preponderating.

MRS. JULIAN HEATH—It is a fearful moment for many a young mother when the nurse leaves.

SIR RABINDRANATH TAGORE—The vers libre movement has become necessary in the present age.

GRANTLAND RICE—What has become of the old-fashioned football player who used to wear long hair.

BISHOP E. S. LINES—It is a great mistake to bind the fortunes of the church with the privileged classes.

WOODROW WILSON—I don't know that any one expounds the theory of popular government better than Tennyson.

ROBERT HERRICK—The old spread-eagleism seems to have blossomed into the windy self-gratulation of quack philosophy.

DR. F. ROBBEAS—The public roller towel of the past was innocuous as compared with the family pocket handkerchief.

EX-PREMIER VENIZELOS—If there is no awakening of the Hellenic conscience I shall leave Europe and go to live in America.

PETER NEWELL—An artist who is to make a success of illustrating must possess the qualities necessary for success on the stage.

MARGARET HINCKLEY, Labor Leader—If a milkman comes to your home without a union button fling him downstairs on his head.

VICE-PRESIDENT MARSHALL—If I had been in the Garden of Eden I would not have eaten the apple. But I don't know—I never met that charming soubrette, Eve.

GERTRUDE ATHERTON—After the war there will be at best something like a proportion of one whole man to ten women, and all sorts of expedients are being suggested from polygamy to artificial fertilization.

## KNOCKING AT THE DOOR

**I**N the case of the proposed purchase of the Danish West Indies there is fortunately no such doubt as has caused us perplexity in regard to our duty toward the Philippines, that is, the question of whether the inhabitants wished to come under the American flag. As soon as it was learned that the question was up before the Danish Rigsdag automobiles were sent scurrying around St. Croix and that evening a third of the population of the island met in mass meetings and voted 5727 to 7 in favor of annexation by the United States. Women, of course, voted as well as men, for Denmark is an equal suffrage country now.

The Colonial Council of St. Thomas and St. Jan passed unanimously the following resolution, which was cabled to Copenhagen:

As the constantly recurring sale negotiations paralyze all enterprise in St. Thomas and St. Jan, and as great depression, with public deficit and private misery, has already been caused by the war and the disappointment from the Panama Canal, the Mother Country is earnestly requested to hasten the present negotiations and implored not to reject the sale unless the nation demand it and be willing to take the consequences afterwards.

Formerly the Danes on the islands, a very small minority mostly composed of officials, opposed the sale but now they are convinced of its necessity and indignant at Denmark for its neglect of its West Indian possessions. For instance, Mr. Knut-Hansen, an appointee of the Crown, in speaking in favor of the above resolution before the Colonial Council, said:

I am an anti-sale man; that is, I strongly object that Denmark one time after the other takes out from forgotten obscurity certain small, dusty islands, offers them for sale, and then shoves them back into obscurity. This is ruinous and intolerable, for during these sale-periods we are like rooted-up and the shock from the uprooting hardly gets time to wear off before the next sale-period comes round. We have stood years of misery tied in the sun without food and water asking for help, hoping for help, nay, some of us even trusting that help would come.

Mr. Knut-Hansen's metaphors are mixt, but his meaning is plain. Councilor Christensen is equally forcible and picturesque in the expression of his feelings:

While money flows in Denmark in golden streams, while they are quarreling and bargaining inside, we, the objects, are standing like the donkey in the snow outside the tavern, starving, forgotten. They have not even had the decency personally to inform us of their intentions and have suffered the first intimation to be thrown to us by a foreign news bureau thru its private correspondent.

The secrecy maintained by the Danish Government in regard to the negotiations is also condemned in the Mother Country. Even after the sale had been virtually arranged Minister of Finance Brandes and Minister of Foreign Affairs Scavenius denied that anything of the kind was contemplated. This denial has called down upon the ministers the reproof of Bishop Ostfeldt, who demands their dismissal for failing to maintain the ancient reputation of the Danes for truthfulness.

Minister Brandes—who by the way is a brother of the famous critic, Georg Brandes—gave to the Rigsdag a curious explanation of the reasons why he had negotiated the sale to the United States. It was not, he said, because the islands were not prospering nor because of the money offered, but "international considerations alone" were the cause of the sale. And he asks, "What should we do, for instance, if the United States occupied the islands? Should we declare war or appeal to

Europe?" Minister Scavenius also hinted at foreign pressure as necessitating the sale.

It would be absurd to interpret these obscure allusions as implying that the American Government had any intention of seizing the islands so long as they remain in Danish possession. The United States has intimated a willingness to buy them in 1867, 1902, 1910 and 1916 and perhaps at other times, but it has never had so strong a desire for them as to be tempted to dispossess Denmark by force. It is only in case of an impending transfer of the islands to some other European power that the Monroe Doctrine would become applicable and the United States would feel obliged to intervene. If Denmark should become involved in the war such a transfer would be very likely. We have previously alluded to the rumor, current in the Caribbean, that the Danish Islands were to be ceded to England or France in exchange for Schleswig in case the Allies are victorious. On the other hand there is the possibility that Germany may thru desperation or ambition invade and annex Denmark. In any case it would be a wise precaution to have the islands safely in our possession before such a question comes up and this is sufficient to account for the evident desire of the Danish and the American Governments to have the question settled as soon as possible. And the islanders are equally eager for its settlement.

By a strange and sad coincidence the Islands have been visited by a hurricane almost as severe as that which devastated them when first their sale was pending fifty years ago. It was then used as an argument against annexation and Secretary Seward, who was trying to put thru the bills for the purchase of Alaska and the Danish West Indies, was ridiculed for wasting good American dollars on "icebergs, earthquakes and tornadoes."

But now it should have the opposite effect and hasten the purchase in order that the present ruinous state of uncertainty may be ended. Indeed we ought not to wait upon the dilatory Rigsdag to consummate the purchase but give such unofficial aid as we can to the islanders in their distress.

The need is great. The beautiful harbor of Charlotte Amalia, of which we gave a full page picture on May 13, last, looks as tho it had been bombarded. The coconut groves are uprooted; the buildings thrown down. The Hamburg-American steamer "Calabria" lies wrecked upon the rocks and a Danish bark forms a complement on the other side of the bay. One dredge has run right up against the King's Wharf and rests comfortably on the bottom as tho dredging for sunken ships. Few lives were lost but thousands of poor people have been left homeless and destitute. The churches and schools of the Moravian Mission have suffered damages amounting to \$10,000 or more.

In the case of the great Jamaican earthquake the efforts of our navy to extend relief were rudely resented by the British Governor, but in the case of these, our prospective compatriots, no such rebuff need be anticipated. A popular subscription from generous-hearted Americans in this emergency would make a very favorable impression in the Islands.

## FACE THE WAR DANGER AND PREPARE FOR PEACE

The while, ere peace returns to stay  
There looms a conflict mightier yet.

SO wrote Harry Thurston Peck in 1890 in "Unter den Linden," predicting the tempest of wrath that broke upon Europe and the world in 1914.

Many times these fateful words have risen in the minds of thoughtful men in the last two years. When this war ends at last, shall peace return to stay, or are they right who warn us that a stalemate settlement will settle nothing, and that there looms a conflict mightier yet?

There are facts enough to awaken apprehension. The hatreds on both sides are deep, and the relentlessness of the combatants surpasses anything that history records. It has taken fifty years since the Civil War ended to bring the reality of forgiveness and forgetfulness throughout North and South in the United States. It will take at least as long to heal the wounds of the spirit in Europe after the wounds of the flesh no longer pain and the anguish of grief is dulled. Yet if the warring nations only were to be factors of destiny, time would do its work. The danger lies in complications infinitely more perilous than bitter memories.

Those who insist that after the war, if not before, the present coalitions will break up, have the warnings of history to confirm their judgment. Alliances and ententes have as often disintegrated as endured. On the face of things it is not more improbable that Japan and Russia will come to an understanding with Germany, as various German writers predict, than it was that Japan and Russia should become allies two years ago. It is probably a fact that Japan has gained more in material strength and resources in the course of the present war than all other nations put together. On the chessboard of international relations she has so disposed her pieces that she now reasonably expects to dominate the Asian situation from Siberia to the frontiers of India. Japan has been poor; Japan will not long be poor with China's resources behind her.

Japan and the United States are friends, as they have been for two generations. The wise men of Japan, the wise and the just men of America, profoundly hope that they will continue to be friends; but in the United States, if not also in Japan, there are unjust men and trouble makers, whose opportunities for mischief are now great and serious. Japan and England are friends, but the possibility of irritation over spheres of influence and the control of Asian trade are not inconsiderable.

It is folly incredible to ignore the possibility of a conflict between East and West. A very small thing might precipitate it, and the responsibility resting on every citizen, as upon every statesman, to think soberly and act justly, so that no needless cause of offense be given. Is the heaviest ever laid upon civilized mankind.

Whether out of such untoward possibility arising, or precipitated by any other grouping of events, another great war, should such an unspeakable calamity occur, would involve every nation. President Wilson is right in saying that "next time" there will be no neutrals, and no perplexing problems of neutral rights and obligations.

We warn of these things not as expecting them, because our faith is unshaken that they need not occur.

But to insure against them and to prevent them we must take thought and make preparation. They will overtake the world if the world idly surrenders itself to wantonness and negligence. Now is the time to insist that all discussions of what is to come after this war shall be forced up to the high levels of wisdom and morality, and be maintained there. There must be no unprotested talk about revenges and organized reprisals. Rather should there be iteration and reiteration of the imperative importance of freer world trade, a rapid return to the practise of local and individual liberty, and a more diligent cultivation of the international mind.

Above all, now and ceaselessly should every effort be put forth to create and to set going that organization of world vigilance and police power contemplated in the program of the League to Enforce Peace.

## THE STUDY OF RUSSIAN

IN the United States the vision of new commercial fields opened by the war has given a boom to the study of Spanish. In England the same cause has turned attention to Russian. At a recent examination held in London by the Royal Society of Arts 160 candidates presented themselves for the Russian language, whereas before the war there were rarely a dozen taking this subject. Formerly only one British university, that of Liverpool, had a regular school of Russian studies. Now many of the universities, colleges, public schools and technological schools are giving instruction in the language. Endowments have been given this year for Russian chairs at the universities of Leeds, Sheffield, Birmingham and Manchester. The London County Council has introduced the language into five schools as a regular course in commercial evening classes. The Bradford Dyers' Association has provided the funds for ten traveling scholarships by which young men in the piece-goods industry are to spend a year in Russia.

The enthusiasm now manifested in England for everything Russian is in amusing contrast with the dislike and suspicion formerly prevailing. One over-zealous advocate of Russian studies lets himself go in this fashion: "Down with Virgil, long live Pushkin . . . The Russian language will take the place of Greek and Latin in all the schools of Europe . . . Livy will be superseded by Karamzin; Plato by Vladimir Soloviev."

The opportunities opening in Russia for American trade are second only to those for British, but so far our schools have not felt the stimulus or recognized the need as they have for Spanish. Our leading universities have for some time realized the importance of the subject from a linguistic and literary standpoint but our commercial schools have been negligent. Slavonic studies were first started in America by Leo Wiener at Harvard in 1896. Five years later George R. Noyes began to teach Russian in the University of California. In 1907 the subject was taken up by Harper at Chicago, and Mandel at Yale. Next year Meader began his work at the University of Michigan and later Johns Hopkins, Columbia and no doubt others put the subject into their curriculum. Lastly we hear that a chair of Russian has been endowed at the University of Washington.

It might be thought that there would be no need for Americans to learn Russian since we have in this country more than a million immigrants from Russia. But

most of these are Jews and so are disqualified by religion to enter a field for which they are especially adapted by racial temperament and ability. Russia shows no disposition to remove her oppressive discrimination against the Jews and refuses to recognize their rights as American citizens. Our government abrogated the treaty with Russia on that account but that action has had no effect upon the Russian policy. Perhaps a chastened spirit induced by the war may some time liberalize Russia but at present she refuses to renew the treaty on the American terms. Until then Jewish representatives of American firms will be at a disadvantage in Russia and so since we cannot make as much use as we might of those who learned Russian in childhood we must have it taught more in our schools and arrange for exchanges of students and teachers.

### THE TASTE OF A NAME

WE are glad to see that the fruit which has hitherto borne the disgusting name of "alligator pear" is now appearing in the market as the "avocado." It ought to facilitate its growing popularity that this fruit has thrown off its false pretensions, for it does not taste in the least like a pear, nor, we presume—tho we never shall know for sure—like an alligator. It might be objected that the idea of eating a green lawyer with French dressing would be as distasteful as that of eating an alligator, but we are not yet so familiar with Spanish as to be bothered by that. When we are we can restore this much abused name to its original Aztec and call it *ahuacatl*, which would offend nobody but the vegetarians.

This matter of fruit names ought to receive more attention than it does. So long as the *Lycopersicum esculentum* was called "love-apple" people were naturally afraid to eat it, but as soon as it became known as "tomato" it was eaten with impunity.

There is another fruit that ought to apply to the court to have its name changed; that is the grape-fruit. It has nothing of the disagreeable connotation of the alligator pear, but it is meaningless except to those few who have seen the golden fruit hang in bunches on the trees. Now as it happens no fruit has more names belonging to it than this. Here are a few of them: pom-pelmoose, pampelmouse, pamplemousse, pampelimouse, pimple-nose, djeroek, yu, nebu, shaddock, chaddock, pomelo, pomolo, pompion, pompone, forbidden fruit, citrus decumana. Of these we must rule out for reasons of taste "pimple-nose" and those ending in "mouse"; also, from religious scruples, "forbidden fruit." But that leaves several good ones to choose from, of which pomelo is probably the best. *Vive la pomelo. Conspuez* grape-fruit.

### AUSTRALIA DOES THE IMPOSSIBLE

IT is often said that democratic control of a country at war is impracticable, because a popular referendum in the midst of the conflict would be impossible. In accordance with this tradition none of the European belligerents has ventured to hold an election and their parliaments continue in power altho their terms may have expired. But the Australasians have a way of going ahead and doing things that the rest of the world say they cannot do. So they have just held a referendum

on the question of conscription for European service. The returns from the backwoods precincts are not all in yet, but it seems that the proposal has been defeated by about 60,000 majority out of a total vote of nearly two million.

It has been too hastily assumed by our newspapers that the woman vote defeated it, for it is the theory of anti-suffragists, and even of certain pro-suffragists who are old enough to know better, that men and women will vote against each other when both have the ballot, especially on such a question as this. There is nothing in the experience of Australia or any other equal suffrage state to support this theory. In fact, the opposite inference might be drawn from the fact that in the broad British empire there were two dominions and only two where women had the right to vote, Australia and New Zealand, and these two were the only ones which had adopted before the war a system of compulsory military training and universal service. We may well believe that many a woman voted against the law which would have sent into the war game her brother or son, possibly—tho it was not intended to conscript married men—her husband. But on the other hand many a soldier's wife or widow must have voted for it when she saw able-bodied slackers all about her home refusing to risk their own precious lives as had her husband.

The real opposition to the proposed measure came not from the women but from the Labor party of both sexes. This is an interesting point, for it was the Labor party that established in 1911 the present system of compulsory military training drawn up by Lord Kitchener, according to which military training begins in the schools at the age of twelve and continues to the age of twenty-six, the time required being some sixteen days a year. The Australian government, like every other, has the inherent right to call out every able-bodied man for home defense but not to send them over-seas. The question put to the people on October 28 was:

Are you in favor of the government having, in this grave emergency, the same compulsory powers over citizens in regard to requiring their military service, for the term of the war, outside the Commonwealth, as it now has in regard to military service within the Commonwealth?

This was brought forward by the Labor Ministry and passed the Senate and House of Representatives by a vote of two to one, altho the Labor party has a majority in both houses of the Commonwealth Parliament.

But the executive committee of the Labor party, which holds the whip-hand over its representatives, declared against it. Premier Hughes and other members of the government were excommunicated from the party and even refused the right to speak on the labor union platforms in defense of their proposal, a curious case of intolerance by a party which is so loud in its demands for free speech. The Catholic vote, which in Australia is thrown for the Labor party in spite of its socialism, went the same way in this case, largely because of the resentment of the Irish at the withholding of Home Rule after it has been authorized by law. Then, too, there was a feeling undoubtedly prevalent in Australia, altho it is not allowed to appear in print, that the thousands of young Australians who first responded to the call of the mother country, had not merely sacrificed but wasted their lives because of the blunders of the British

army command. Gallipoli is a monument to Australian valor and British mismanagement. The "Anzacs" are now fighting on the Somme with the same bravery and greater success, but even here the gain of four miles in four months at a cost of 400,000 men is not encouraging. The Australians have been very patient and loyal. There has been much less faultfinding in their press than in the English. But under the circumstances it is not surprising that the Australian people were reluctant to commit themselves to the engagement of sending 16,500 men a month to fill the gaps in the ranks for an indefinite period. They have already volunteered to the number of nearly 300,000 out of a population of only 5,000,000, and this amazing achievement is entirely sufficient to acquit them of any charge of disloyalty or of cowardice.

The attitude of the Australian people is then to be interpreted as meaning, first, that they favor universal military training but are opposed to conscription, and, second, that they favor home defense but not enforced participation in European conflicts.

Their position may be called illogical. It might be argued that by fighting on the Dardanelles and the Somme they are defending their own land in the only effective way. If Germany is victorious and able to dictate terms, she would not be likely to annex Great Britain or even Ireland, but she would quite possibly demand some of the vast and vacant land of Australia. But, whether they be right or wrong, it is evident that half or more than half of the Australian people do not regard it as their imperative duty to join in a war over whose causes they had no control and in whose conclusion they may not be consulted.

## THE RESURRECTION OF POLAND

A HUNDRED and twenty years ago the three kings whose domains bordered on Poland divided up that kingdom among themselves. Today the Poles have the promise of the three kings that their country shall be restored. But the promise of three persons in severalty is not so binding as their joint promise. We may be sure that when the Emperor of Russia speaks about the restoration of Poland he does not mean the same as the Emperor of Germany and the Emperor of Austria, and we may suspect that the two latter monarchs are not of one mind about it. The capture of Warsaw last year was not followed, as was expected, by a triumphal entry of its future ruler with a constitution in his hand, and it is surmized that the reason for the failure to take advantage of this opportunity for a spectacular stroke of statesmanship was that Vienna and Berlin could not agree as to whether a German or an Austrian prince should be placed upon the Polish throne.

At the outset of the war the Czar announced that Poland would be granted autonomy if the Poles remained loyal, but no steps have been taken in the last two years to carry out or make more definite this vague and conditional promise, so a large proportion of the Polish nationalists have of late been looking rather to Germany than to Russia for the realization of their hopes. Whether they will put sufficient faith in the present promise of the German and Austrian emperors to take up arms in their behalf remains to be seen. If such a kingdom is established under the auspices of the Central

Powers a national army may be raised from among the Poles which could then assume in part at least the defense of Poland, thus freeing the German and Austrian troops for service elsewhere. The London *Times* says:

The kingdom has been created in order to lend a show of legality to the conscription of Russian subjects for a war against Russia. Such a project is a flagrant outrage against the first elements of international right, but in accordance with Frederick the Great's practice of making prisoners fight their own countrymen.

But the Poles have already been conscripted on both sides to fight against their own countrymen, and it is a question whether they will not prefer to serve under the banner of ancient Poland, even if it be upheld by Teuton hands, than under the Czar. The Poles have no reason to love or put faith in any of their three foreign rulers. The Prussians have been almost as oppressive as the Russians in their efforts to crush out the national spirit. The Poles in Austria have, on the whole, fared the best of the three. But neither the Russian knout nor the Prussian school has been able to destroy their racial consciousness or quench their faith in a future resurrection of their ancient kingdom. The nation was divided, but the people were united. They will never be satisfied until the three again become one.

The manifesto of the Teuton emperor does not promise either an independent or a united Poland. We quote the essential paragraphs of the proclamation that was read on Sunday, November 5, by the German governor at Warsaw and the Austrian governor at Lublin, for its wording deserves careful consideration:

His Majesty the German Emperor and his Majesty the Emperor of Austria and Apostolic King of Hungary, inspired by firm confidence in a final victory of their arms and prompted by a desire to lead the districts conquered by their armies under heavy sacrifices from Russian domination toward a happy future, have agreed to form of these districts a national State with a hereditary monarchy and a constitutional government. The exact frontiers of the Kingdom of Poland will be outlined later.

The new kingdom will receive the guarantees needed for the free development of its own forces by its intimate relations with both Powers. The glorious traditions of the ancient Polish armies and the memory of the brave comradeship in the Great War of our days will be revived in a national army. The organization, instruction and command of this army will be arranged by common agreement.

The allied monarchs express the confident hope that Polish wishes for the evolution of a Polish State and for the national development of a Polish kingdom will now be fulfilled, taking due consideration of the general political conditions prevailing in Europe and of the welfare and the safety of their own countries and nations.

The great realm which the western neighbors of the kingdom of Poland will have on their eastern frontier will be a free and happy State, enjoying its own national life, and they will welcome with joy the birth and prosperous development of this State.

It will be noticed that the imperial manifesto applies only to that part of Poland which was formerly under Russian rule and is now in the possession of the Teutonic Powers. Neither of the emperors promises to relinquish any of his own Polish territory, altho that is hinted at in the statement about the later delimitation of frontiers.

Whatever we may think of the motives of Germany and Austria or of the probability that they will be able to carry out their scheme, we may at least feel sure that such a public pledge by the two powers now holding the country makes it more nearly certain that, however the war may come out, a new Poland will be one of the results.

# THE STORY OF THE WEEK

**Vaux Recaptured** The Germans, in their five months' offensive at Verdun, succeeded in taking only two of the permanent forts, Douaumont and Vaux. The first of these was recaptured by a sudden French assault last week. The second was evacuated by the Germans a week later. The French advance north and south of the fort had put them in a position to bombard it from three sides, and the garrison were in danger of being altogether cut off. The French 16-inch guns and a host of smaller cannon were brought to bear upon this hilltop and opened fire on October 24. Hour by hour the bombardment increased in intensity until at the end of the one hundred and fiftieth hour a magazine exploded. Other internal explosions followed, some of the magazines being blown up by the French shells, others being set off by the Germans as they left. The French continued shelling the fort for a long time before they knew it had been vacated, for the garrison withdrew secretly, probably by means of a tunnel.

While it was obviously sensible of the Germans not to persist in the defense of a position which was ultimately untenable and no longer valuable to them, it must have been a severe blow to their pride to surrender a stronghold which had cost them so much. It was about three months after the Germans had taken Douaumont before they could take the neighboring fort of Vaux, but the French captured it within a week after they were in possession of Fort Douaumont. If we may accept the French estimates, the Crown Prince sacrificed 80,000 men in the siege of Vaux; the French loss in regaining it was practically nothing. Formerly, whenever the French regained a bit of ground about Verdun, the Germans delivered a counter-attack with great

## THE GREAT WAR

*October 30*—Russians repulse Turks near Hamadan, Persia. British steamer "Marina," carrying whisky to Baltimore, reported torpedoed on Saturday.

*October 31*—Serbs repulse Bulgars on Cerna River. Two British steamers seized by German warships.

*November 1*—Germans evacuate Fort Vaux. Italians smash Austrian lines on Carso.

*November 2*—Italian offensive continues. Germans drive Russians back from Halicz.

*November 3*—Two British steamers collide in Irish Sea; ninety-two lives lost.

*November 4*—Venizelists fighting Greek Royalists at Katerina.

*November 5*—Independent Kingdom of Poland proclaimed.

vigor and promptness, and usually with success. But now their reaction is feeble or altogether absent. They still hold the greater part of the ground that they gained on both sides of the Meuse by their spring offensive, but the loss of these forts dislodges them from the ridge dominating Verdun and leaves them no hope of taking that fortress.

Their failure to capture Verdun is the last and greatest of the three defeats of the Germans in the west. The first was when they were thrown back from the Marne and so Paris was saved. The second was when they tried to break thru the British lines at Ypres but failed to reach the Channel. Why next they concentrated all their efforts on one of the strongest, but not the most important of the French fortresses, is a mystery that has yet to be explained. It has since leaked out that some of the leading French officers regarded Verdun as so unessential to the defense of France that they

avored its evacuation when the German attack began. They were overruled by the government which thought that the surrender of so famous a fortress would be fatal to French prestige.

As it turned out it was German prestige that suffered. As Moltke was retired from the supreme command after the defeat on the Marne, so Falkenhayn was retired after the defeat at Verdun. Hindenburg, who was put in his place, evidently has his face turned eastward. He is occupied with the smashing of Rumania and has, it seems, drawn from the western front all the troops, possibly too many for safety.

All is quiet along the Somme River, that is, quiet in comparison with the terrible conflict waged for the past four months. There have been no considerable changes of position, and even the incessant bombardment has somewhat slackened. Bad weather is alleged as the cause of this apparent inactivity. In the two years of the war there has been little accomplished in France by either side during the winter, altho, curiously enough, there has been active campaigning in Russia, Serbia and the high Carpathians.

For once the German estimate of British losses is less than the figures given out by the British official list. The German General Staff places the British loss on the Somme at 400,000 and the French at 180,000. The French never publish their losses, but the British casualty lists for the past four months sum up 414,202. This covers the losses to the land forces in all the fields, but since almost the only other place where there has been serious fighting is at Salonica, and here the British losses cannot have amounted to 14,000, the Somme must account for more than 400,000. During the month of October the British casualties are re-

THE BRIDGE THAT WAS

The bridge at Chernavoda which connected Bucharest, the Rumanian capital, with Constanza, its only seaport, was destroyed by the Rumanian troops after their retreat from the Dobruja. It was one of the famous bridges of the world, for with its viaducts it extended twelve and one-half miles over the Danube River and its adjacent swamps. The loss of this bridge may prove fatal to Rumania, for it cuts the connection with Russia by way of the sea and leaves only one line of railroad by which troops and supplies can be sent into Rumania.

ported as 22,859 killed, 76,684 wounded, and 8712 missing, or 108,255 altogether, an average daily loss of 3452.

**Rumania on the Defensive** Under new management the Rumanian armies are giving a better account of themselves. General Bertholet, a French officer of high reputation as a strategist, has reached Bucharest and taken supreme command with the Russian General Bielayev as his assistant. A Russian officer, Lieutenant General Vladimir Sakharoff, who has been in command in Galicia, has been sent to the Dobrudja to take charge of the troops which were driven northward after their defeat on the Constanza line. These scattered forces, composed of Russians and Rumanians with, it is now reported, some Serbians, have been gathered together and are making a stand in the northern part of the Dobrudja.

The fighting on the mountain frontier of Rumania has been indecisive this week. In the westernmost of the passes, Vulcan Pass, the Rumanians have the upper hand and they have driven the Bavarians back into Transylvania and taken 1200 prisoners. In the Red Tower Pass, on the contrary, the Austro-German troops have penetrated twelve miles into Rumanian territory. In the Predeal or Tömös Pass, which is the most important since it leads directly toward Bucharest, both sides claim minor successes, but there is no great change in the situation. Here the Rumanians have fortified the mountains and they have the aid of the weather in the defense of their country. The invaders are having difficulty in bringing up their big guns for the ravines are filled with snow and the ground is soaked with rain. Berlin reports that since October 10 General von Falkenhayn's army has captured 151 Rumanian officers, 9920 men, and much war material, including thirty-seven cannon, forty-seven machine guns, and one flag.

### The Conquest of the Carso

The drive toward Triest for which the Italians have been making preparations for many weeks was launched on the first of November. For several days in advance the Italian cannon had been busy pounding the Austrian lines and their front trenches were blown up in places by mines. Three successive charges were made in which eight divisions of Italian troops are said to have participated. The Austrians put up a stout resistance but lost heavily in killed and wounded, and especially prisoners. In the first day the Italians took 4731 prisoners and on the second day 3492 more. The total losses of the Austrians are estimated by their enemy at 39,000. The Austrians report taking 2000 prisoners in their counter-attacks.

The Austrian line which the Italians are trying to break thru extends straight south from Gorizia to the sea, a distance of twelve miles. The Italians will have to gain control of this line for a considerable distance before it will be safe for them to advance along the railroad which runs near the coast

Central News

### THE FRENCH COMMANDER OF THE RUMANIAN FORCES

In response to the appeal of King Ferdinand for help the Allies have sent General Bertholet with other French and Russian officers to take charge of the defense of Rumania from Austrian invasion

to Triest, fifteen miles beyond. Between the Italians and their goal, Triest, lies Carso or Karst, a calcareous plateau of a thousand feet altitude. Its cliffs and caves and wooded bluffs form the scene of the present conflict. The Austrians can take advantage of these natural obstacles but on the other hand they cannot construct artificial entrenchments as well as on less rocky ground.

It may be doubted whether the Italians intend to push on to Triest immediately but their attack delivered now will tend to relieve the pressure upon Rumania. We seem to see the effect of it already in the fact that the advance of General von Falkenhayn thru the Transylvanian Alps has come to a halt.

### Deportation of French Civilians

The French Government has protested to the neutral nations against the violation of the laws of civilized warfare by the Germans in taking young men and women from French cities and transporting them to other regions, where they are compelled to work in the fields.

Last spring the German authorities issued an appeal for agricultural labor in the north of France, but receiving an insufficient response, 25,000 civilians were picked out from the working class quarters of Lille, Roubaix and Tourcoing on April 22-29, and sent eastward for employment in getting in the crops. Between twenty and thirty per cent were women, some of them as young as fifteen. Girls younger than that, women unused to labor, and the mothers of children were usually left behind. Men were taken up to the age of fifty-five. On the day of the deportation all the inhabitants were required to gather in front of their houses ready to travel. Then patrols of ten or fifteen German soldiers with fixed bayonets collected those whom the officer picked out and they were immediately loaded on wagons to be taken away. Only twenty-seven pounds of luggage were allowed them. The bishop of Lille and the civil authorities protested in vain against the outrage. Some mothers went insane with grief as they saw their daughters carried off to unknown dangers. Many of the Landsturm officers engaged in carrying out these orders express their sympathy with the victims and regret for the duty they had to perform. It is said that some of the officers were put into the citadel at Lille for refusing to carry out these orders. According to the British papers the girls were taken away from their homes for immoral purposes or are likely to fall into evil ways thru being employed as cooks for the German soldiers or servants for the officers. To employ civilians for such forced labor is at any rate contrary to the Hague Convention.

On the German side it is alleged that since the British have shut out all commerce and food importations, contrary to the Declaration of London, that it was necessary to transfer the laboring population from the cities where they had no work to the country where they could raise food to keep them from starvation next winter. They are paid for their labor and well fed under the management of the American Relief Committee at the expense of the German Government. They are housed in cottages under the supervision of the French local authorities and girls unaccompanied by their relatives are placed with married couples. Families are kept together so far as possible. An American correspondent who visited the district where they are employed confirms these statements as to their treatment in so far as his observation goes.

The Spanish Government responded to the French appeal and made repeated representations to Germany

against such treatment of non-combatants. The Prussian military authorities have yielded to the Spanish intercession so far to send back two thousand of the young women and to promise that the rest will be returned to their homes after the harvest is over.

**Civil War in Greece** Every few days we hear from Athens, via London, that King Constantine has conceded all the demands of the Allies, and that Greece is soon to enter the war. Then something transpires to show that the King is still recalcitrant, and that a considerable proportion of the people are violently opposed to joining the Allies. It is difficult to discover what is going on in Greece, for the Allies have established a strict censorship, altho the Greek constitution prohibits censorship. So we must do the best we can by piecing together the fragmentary information that comes to us.

From the statement that Mr. Christicos, who was arrested by the French authorities, is "the head of over 70,000 reservists and Royalists thruout Greece," we may infer that the King has better backing than he has been said to have. Altho the Allies were reported to have taken over the only railroad leading from Athens to Larissa, yet we hear that Royalist troops have just been transported north by this route to fight the Venizelists. Ex-premier Venizelos has established an independent government of the triumvirate type at Salonica, and has received the recognition and support of the Allies, who have supplied him with money. Under their authority he has raised an army said to number 30,000. This was at first called the "home defense" force, but this was changed to "anti-Bulgarian," but either name seems inappropriate since it is not moving north against the Bulgars, but south against the Greeks who stand

by the King. A body of 600 of the Venizelist troops, with machine guns, attacked the town of Katerina, between Salonica and Larissa and drove out the 150 Royalist troops there stationed. The Allies demand that the King withdraw all his troops to the southern end of Greece.

A German officer carrying by motor car the official mail of the German Legation at Athens was arrested at Larissa. The mail is said to have contained compromising letters from the Greek King and Queen to the Kaiser, also detailed plans of the Suez defenses, and similar information for the German attachés at Sofia and Constantinople.

The Greek steamer "Angheliki" was sunk near the Piraeus by a mine or torpedo. The vessel was carrying recruits for the Venizelist army at Salonica, and some two hundred of them were drowned. The Greek naval officers are exceedingly bitter because the Allies, after seizing the Greek fleet, have failed to protect Greek shipping.

**Civilian Victims** The Zeppelin raids on England have attracted attention because of their spectacular character, but the number of non-combatants injured by them is less than those who have suffered from the more frequent raids of French and British aeroplanes behind the German lines. But most of the civilian victims of the latter have been French or Belgians, for the aeroplanes have not often reached Germany. Premier Asquith stated in Parliament on November 1 that the number of British civilians killed by wounds or shock was 589, injured 1693, drowned 3014, total 5296 since the war began. Most of these casualties as will be seen are due to the sinking of British ships by submarines or mines.

A German statement of the same date gives the number of casualties among civilians in the occupied districts

of France and Belgium due to the bombs dropt from aeroplanes or fired from guns as 3348. This does not include the air raids over German territory. During the month of October alone the Anglo-French aeroplanes and artillery killed 37 men, 16 women and 15 children, and wounded 67 men, 55 women and 43 children in the parts of France and Belgium behind the German front.

The sinking of the "Marina" Sunk British steamship "Marina" by a German submarine brings up in an acute form the question of Germany's responsibilities and America's obligations. The "Marina" was proceeding from Glasgow to Baltimore with a cargo of whisky when it was struck by a torpedo about four o'clock in the afternoon of Saturday, October 28. The crew took to the lifeboats and were clear of the ship when a second torpedo was fired into her twelve minutes after the first which blew up the boiler and sent her to the bottom. According to the testimony of the survivors no warning was given and the submarine was not seen until she emerged after launching the second torpedo. She did not approach or proffer assistance. The sea was rough and in launching the boats several men were lost including the captain, who was last to leave the ship. It was from seventeen to thirty-one hours before the lifeboats reached the Irish coast.

There were fifty Americans on board, all members of the crew except one. Six of these are reported drowned. The "Marina" has been employed by the British Admiralty, but was under private charter for this voyage. She was armed with a 4.7 inch gun, but did not use it as the submarine was not discovered before the attack.

The British steamer "Rowanmore," bound from Baltimore to Liverpool, was shelled off Fastnet on October 26 by a German submarine. The captain tried to escape but was run down within an hour after being struck several times by shells. After the crew had left the ship, she was torpedoed and sunk. The captain was taken on board the submarine. Later a German submarine, possibly the same, was sunk by British warships. The crew of the "Rowanmore" were saved. Among them were two white Americans and five Filipinos, the latter giving Liverpool as their residence.

The German Government, in the note of February 10, claimed the right to treat enemy merchantmen armed with guns as belligerents, and in support of this contention produced the orders of the British Admiralty, taken from one of the captured ships, authorizing the captains of merchantmen to open fire on suspicious vessels. Secretary Lansing, in his note of March 25, refused to accept this view, and declared that "conclusive evidence of a purpose to use the armament for aggression is essential." In the "Sussex" note Germany promised not to sink passenger and freight vessels "unless the ships attempt to escape or offer resistance."

PATRIOTS OR REBELS?

Greek volunteers marching along the Boulevard de la Victoire at Salonica. Ex-premier Venizelos has called for volunteers to join with the Allies in fighting the Bulgars, but their first engagement was an attack upon their own countrymen south of Salonica. If they overthrow the royalists they may establish a new republic in Greece.

## ESCAPE FROM A BURNING BALLOON

It might be a movie thriller. But it is actual warfare. The French aeroplane set fire to the German observation balloon and the observer dropt in his parachute just in time

End of the Republican Campaign

Mr. Hughes ended his long and vigorous campaign for the presidency with a tour thru the doubtful states of Ohio and Indiana and a final Republican rally in New York City. In Columbus, Ohio, an audience of ten thousand accorded the candidate a most enthusiastic reception. Mr. Hughes denounced the economic legislation of the administration as badly drawn and disquieting to business. On the following day, October 31, Mr. Hughes spoke at Columbus, Indiana. A heckler requested him to make plain his attitude on the questions of an embargo upon munitions sent from this country to Europe and of the right of Americans to travel on belligerent ships. The Republican candidate did not hesitate to place himself on record in spite of the large pro-German element among his supporters. "I am," he said, "in favor of the maintenance of every right, including the right of travel and the right of shipments." He justified his position by pointing out that it was to the interest of the United States as a neutral power to uphold all the neutral rights which are admitted by international law.

On November 4, Mr. Hughes spoke at Madison Square Garden in New York City. An audience of fifteen thousand cheered him for more than half an hour and nearly seventy thousand of his partizans worked off their enthusiasm by carrying torches in a monster parade. Mr. Hughes vindicated the right of American citizens who differed with the President to criticize the foreign policy of the administration. He denied that he favored war and in-

sisted that, on the contrary, the only danger of war came from President Wilson's failure to stand unflinchingly for American rights. He urged a return to the protective tariff on the ground that "where there is a differential of labor cost against us the products abroad seeking this market will be sold here to the disadvantage of American products or the wages of American labor will be reduced." He declared that it was no avail to ask Americans to develop the resources of backward countries in the interests of the nation's trade if they were to be denied the protection of the American flag to which their citizenship entitled them. Mr. Hughes address many other audiences during a whirlwind trip thru the city, notably at Union Square, where ex-President Taft spoke with him.

Colonel Roosevelt has taken quite as active a part in the campaign as Mr. Hughes himself, and his speeches have been more vigorous if less diplomatic. On November 2 he spoke to a large audience in Cleveland on the failure of the Wilson administration to protect American lives on the high seas and in Mexico. He denied that he wished intervention in Mexico on behalf of property interests, but he would have the government intervene if necessary to safeguard the lives of American residents. On November 4 he spoke at Cooper Union, New York City, and denounced Mr. Wilson as "another Buchanan," urging his hearers to follow the example of the men of 1860 who "swapped horses" in a great national crisis by exchanging Buchanan for Lincoln. He accused Wilson with having "adroitly and cleverly and with sinister ability appealed to all that is weakest and most unworthy in the American character."

End of the Democratic Campaign

President Wilson devoted the final days of his campaign for reelection to the states of New York and New Jersey. Until a few weeks ago the President left the conduct of the Democratic campaign to other party leaders and devoted his entire time to the duties of his office. But he felt free to deliver a few speeches shortly before election, and since he took an active part in the propaganda of his party other Democratic speakers were more or less eclipsed. This was perhaps fortunate, since every one conceded that President Wilson was much stronger than his party, and his recent campaign speeches were in his best vein. The largest of the Democratic rallies took place at Madison Square Garden, New York City, on November 2, when forty thousand persons clamored for admission to the vast but quite inadequate auditorium. Mr. Wilson expressed confidence in his reelection and reviewed the conduct of the campaign. He said that the Republicans in their struggle to get control of the country had dangerously aggravated class divisions and the prejudices of different national elements in the American people, and that the cause for which he stood was that of national unity. He also defended the Eight-Hour Law as a necessary step to make the workingmen of America feel that they were partakers of the benefits of American citizenship. At Cooper Union he emphasized the same point, the danger of creating a gulf between capital and labor, before an audience of twelve thousand. The President made a third speech in New York City before the Wilson Business Men's National League at a luncheon in the Waldorf Hotel. He boldly defended his progressive policies as es-

## JAPAN'S NEW CABINET

This photograph, sent direct from Tokyo by the correspondent of The Independent, shows all but two of the recently appointed advisers to the Mikado. Admiral Kato, of the Navy, and Viscount Motono, Secretary of Foreign Affairs, are absent. Left to right, standing, are Mr. Nakashoji, Secretary of Agriculture and Commerce; Mr. Arimatsu, Chief of the Bureau of Legislation; Dr. Okada, Secretary of Education; Baron Den, Secretary of Communications; Mr. Ikebe, Private Secretary; Count Kodama, Chief Secretary of the Cabinet; sitting, Judge Matsumuro, Justice; Count Terauchi, Premier, Secretary of Finance; Baron Goto, Secretary of Home Affairs; Lieut. General Oshimu, Secretary of War.

sentinel to keep business men from falling into a rut of conservatism and tradition, and warned his hearers that "brains have been burned out acting as brakes."

Perhaps Mr. Wilson's best speech of the campaign was his final address to his New Jersey neighbors at Shadow Lawn on Saturday, November 4. The first part of the speech was devoted to the local campaign in New Jersey in which he charged the Republican candidate for governor with being a servant of "invisible government." Then he turned to national issues, pointed out that the tariff was no protection to labor since high wages were often paid in unprotected industries and miserable conditions prevailed in many industries that had been beneficiaries of a high tariff, denounced some Republican business men for attempting the coercion of their Democratic employees, and declared that the small and selfish group of capitalists who used to control the credit of the country "now control nothing but the betting." He expressed the opinion that the era of the Old Guard had passed forever with their motto of "enlightened selfishness," since "the only thing that is enlightened is unselfishness." He also argued against selfishness in international affairs and predicted that the United States would never again enjoy the "splendid isolation" of the past, but must shape its future course to the service of humanity.

The end of the campaign found the Democrats more confident than at any previous time since Colonel Roosevelt withdrew from the race in favor of Mr. Hughes. Chairman McCormick, of the Democratic National Committee, issued a last minute prediction that conceded only six states with seventy electoral votes to the Republican national ticket. On the other hand, the official forecast of the Republicans allowed to President Wilson only the states of the solid south as certainly his.

Was There a Postscript? President Wilson has emphatically repudiated the suggestion that

he had contemplated modifying the second note to Germany concerning the "Lusitania" incident. It will be remembered that this note was delayed for several days after the public supposed it would be ready for publication, that there were rumors of dissension in the cabinet over its terms, and that it led to the resignation of the Secretary of State, Mr. Bryan. Senator Henry Cabot Lodge of Massachusetts offered an explanation of this delay on the authority of Mr. Breckenridge, recently Assistant Secretary of War. The story is that President Wilson had intended to add a postscript to the note to Germany which would remove from the mind of the German Government any fear that the United States would go to war over the submarine issue, that the remonstrance of several members of the cabinet caused Mr. Wilson to abandon his plan, and that Secretary Bryan resigned because this defeat convinced him that the President had gone over to the war party. Senator Lodge named as witnesses to the fact that Mr. Breckenridge had made the statement attributed to him, Dr. Charles H. Bailey of Tufts College, and Mr. John Jeffries, a prominent citizen of Boston; and he added that Mr. Warren, a Republican presidential elector in New Jersey, had learned from "a member of President Wilson's official family" that an offer to arbitrate the "Lusitania" case was to be embodied in a separate note to Mr. Gerard, American Ambassador to Germany.

The form of President Wilson's denial was that "No postscript or amendment of the 'Lusitania' note was ever written or contemplated by me, except such changes as I myself inserted, which strengthened and emphasized the protest." Republicans criticize the wording of the President's statement on the ground that Mr. Wil-

#### THE "DEUTSCHLAND" COMES IN AGAIN

After her second successful trip, said to be conveyed by the "U-57," the German merchant submarine "Deutschland" docked at New London in the slip built for the "Bremen," now reported lost at sea. Captain Koenig promises that a regular undersea service, with sailings every forty days, will soon be established between Bremen and New London.

son might have intended to reassure Germany in some other way than by "postscript or amendment" to that particular note. Indeed, President Wilson admitted that one member of the cabinet had suggested making a proposal of arbitration to Germany, but he denied that the matter had ever been laid before any cabinet meeting. Several members of the cabinet have added their testimony to that of the President that no proposals for arbitrating the submarine issue or modifying "strict accountability" were submitted to their consideration by President Wilson. Democratic managers brand the whole story as an ordinary campaign "roorback"; many Republicans still believe that there may be something in it in spite of official denials. The truth seems to be that Mr. Bryan's proposal for arbitration was magnified and distorted in passing from mouth to mouth until it grew into a report that the President himself had favored surrender of American rights to Germany.

#### The "Deutschland" Here Again

Early in the morning of November 1st the inhabitants of New London, Connecticut, received a surprise visit from the German submersible merchantman, "Deutschland," the only ship of its type that has ever entered an American port. Last July the same ship put in at Baltimore with a cargo consisting principally of dyestuffs and returned in safety to Germany a few weeks later loaded with rubber and nickel. The fate of her sister vessel, the "Bremen," is still one of the mysteries of the sea. Captain Koenig of the "Deutschland" is of the opinion that the "Bremen" was lost on her outbound trip to America. The

#### ANOTHER STRIKE—THE MESSENGER BOYS "WALK OUT"

New York is earning its title, "The City of Strikes." The latest is the organized demand of Postal Telegraph and American District Telegraph messengers for more pay.

"Deutschland," with a crew of twenty-five men, left Bremen for her second trip on October 10, carrying a load of valuable chemicals and probably some commercial securities. Her return trip cargo will consist as before of rubber and nickel, the most valuable munitions which could be packed into so small a space. Bags of mail from Germany were brought ashore from the ship and forwarded to their American destinations. The total value of the cargo is estimated at ten million dollars.

It is rumored that the "U-57," a sister submarine to the "U-53," whose exploits have recently filled the papers, will convoy the "Deutschland" across the Atlantic to safety. Of course the presence of a warlike convoy would deprive the submarine merchantman of the immunity from attack which it now enjoys under international law. This, however, would make little enough difference to the "Deutschland," since the Allies have refused to recognize the non-combatant character of any submarine and would probably sink the ship at sight whether it were accompanied by a warship or not. A more serious aspect of the case is that the presence of submarine warships off the Atlantic coast may mean a renewal of the war on the merchant ships of the Allies, and it may also mean that the "Deutschland" is really acting as a supply boat to German submarines. In that case the Allies would certainly protest to Washington that to permit belligerent supply boats to enter and leave our ports at their will in order to further the work of the German navy is an unneutral act. But it is very possible that the "U-57" is not on this side of the Atlantic at all and that the rumor was started to intimidate shipping companies trading with the Allies.

**Mexican Affairs** The endless civil war in Mexico is raging with renewed violence thruout Chihuahua. According to Mr. Garcia, Inspector General of Consulates for the de facto government, Carranza has now 175,000 men under arms, whereas it is probable that Villa has far less than one-tenth of this number and may have only a few hundred men under arms. Yet Villa is not content with the defensive guerrilla warfare which the nature of the desert country in northern Mexico makes easily possible. Everywhere he is taking the offensive, and there is a report that the towns of Santa Rosalia and Parral have been abandoned by the Carranzistas. Villa is engaged in a war of extermination and the advance of his armies has been everywhere marked by hideous atrocities against civilians who were suspected of loyalty to the government. It is feared that eleven American residents of Parral and Santa Rosalia have lost their lives in consequence of the capture of these places by the rebels. Railroads in Chihuahua and other states of northern Mexico have been cut by detachments of the insurgent army and, on October 30, a train from Juarez was intercepted, the passengers robbed and the soldiers

who were on board to guard the train shot. In retaliation the federal soldiers shoot all of Villa's partizans that fall into their hands. It appears that in one instance the Carranzistas executed a naturalized American citizen, at Parral on October 23.

In spite of the menacing extension of Villa's range of operations the Mexican government seems no more disposed than formerly to welcome the coöperation of the American forces. The sessions of the American-Mexican Joint Commission were suspended by mutual consent until after the elections of November 7, but Carranza will certainly again urge the withdrawal of American forces from Mexico as soon as possible after that date. Since the presidential election turned so largely on the Mexican issue, it was inevitable that our neighbors across the Rio Grande should follow it with much interest. In view of the friendship which the Wilson administration has shown to the Constitutionals it was not a little surprising that on the eve of election various leaders of that faction should be quoted in criticism of the United States. Luis Cabrera, chairman of the Mexican delegates to the international Joint Commission, General Obregon, First Chief Carranza, General Gonzales and Cabinet Minister Aguilar have all issued interviews or statements accusing President Wilson of insincerity in pretending friendship to Mexico while permitting aid to cross the border to the insurgents and keeping an army of invasion on Mexican soil. It should be added, however, that Luis Cabrera has denied authorizing the publication of the statements attributed

to him. Evidence was laid before the Joint Commission by ten Roman Catholic priests that the Carranza government had persecuted the Church.

**Trouble in Santo Domingo** A battle recently took place between a detachment of American marines and rebel forces under General Batista. Two American officers were killed, as well as several of the marines. On the other hand, General Batista was killed in resisting arrest and his followers dispersed. This is not the first trouble that the American forces have had with native insurgents in their work of policing the island. Beginning with the death of Captain Hirshinger last June, at least ten Americans had lost their lives prior to the engagement of last week. As in Hayti, in several of the Central American republics, and to some extent in Mexico, the present policy of the United States appears to be to select that one among two or more rival governments which appears to offer the greatest promise of a stable and progressive government and give it every material and moral support, even to armed intervention. This policy appears to be the only possible one, short of permanent occupation, to bring relative peace to the distracted republics which lie within the tropics. In Santo Domingo, however, the United States has not regarded the government now more or less in power as sufficiently stable to be entrusted with the funds collected by American agents in trust for the Dominicans, and the native administration is temporarily paralyzed in consequence.

THE BEST LAID PLANS—

# CAN EUROPE SCRAP ECONOMIC LAW?

BY JAMES DAVENPORT WHELPLEY

AUTHOR OF "THE TRADE OF THE WORLD," "AMERICAN PUBLIC OPINION"

**I**NTERESTING things are astir in Europe that are not mentioned in the war bulletins. On the one hand Germany is trying to prevail upon Austria-Hungary to enter into an economic partnership and on the other England, France, Belgium, Russia and Italy are considering an economic pact that will, it is claimed, cement their present friendship for all time, render them independent of the rest of the world and bring about a material prosperity for them all beyond the dreams of days before the war.

It is a fascinating game, the only implements needed being pencil and paper, and the players are eager beyond description. A never ending stream of books comes from the European publishers, and the newspapers print columns daily telling how it is to be done and prophesying wonderful things that are to be the result of this newly devised and purely arbitrary rearrangement of trade distribution. The most feasible part of the scheme seems to be that of a union of the Central European Pow-

ers, but quite naturally and characteristically Germany insists that she be the dominant half of any such partnership. Austria, loth to lose her economic freedom and encouraged in her hesitancy by Hungary, does not appear to be so keen as Germany might wish and the many conferences already held report no progress as yet in putting matters into definite form. The proposed German-Austrian-Hungarian union is economically sound in principle but politically difficult, if not impossible, to bring about without splitting the Dual Monarchy asunder.

In the case of the Allied countries a rather remarkable situation presents itself. Here are five important countries each one reflecting absolutely different physical and economic conditions from the others; the peoples of which speak different languages, enjoy varying degrees of development and civilization, and whose temperaments are as far removed in character, one from the other, as may well be imagined. Even their diplomacies are not of the same kind

and between most of them lie long existing racial antagonisms which could have been overcome, even temporarily, only by such a crisis as Europe has now faced, a common danger that brought their armies together to meet a common foe of otherwise overwhelming strength.

It is now proposed that these five countries should enter into an agreement upon economic questions that will render them helpful to each other to the profit of all. France, Italy and Russia are high protection countries. Belgium is a low-tariff country and England is practically a free-trader. To start upon the level, Belgium and England must be converted to a high-tariff policy or the others must abandon their present protective systems. It will be more difficult to make a protection country out of England than many people now think, for it is not a matter of raising or lowering import duties but one in which a principle of government is involved that has stood the wear and tear of many years' interior and exterior trade. For England to become a pro-

tection country is not solely a question of when and where to extend the list of import taxes, for not a penny was collected at the English custom houses before the war on imported goods of a kind that were produced in the United Kingdom. It was the imported goods such as were not produced in the United Kingdom that paid the import taxes and therefore the purpose of the imposition was one of revenue with no hint of protection to British industry.

#### WILL ENGLAND ABANDON FREE TRADE?

WITH all the admitted need of future revenue, and notwithstanding the many reasons now advanced in favor of protection, there is still a large following that clings to the idea of an England free to all who may come and go and of an England free of all restrictions as a place for the gathering together and the redistribution of all the products of the world. Those who believe in a continuation of free trade find in the fact that before the war British foreign trade was by far the largest in the world, the strongest support for their argument. Those who advocate protection are only able to prophesy as to what might happen. Certain complications in England's foreign relations have arisen, however, that are driving the free-traders from their stronghold.

The overseas British peoples have played a tremendous part in the present struggle to save the Empire and they want preference in British trade for overseas products and preference for overseas enterprise in British finance. Among the Allied nations a protective tariff is in a majority and England finds herself rather committed to a harmonious fiscal policy or else in a position where her people apparently intend to take all the tariff concessions they can get from Russia, France, Belgium and Italy and give nothing similar in return.

#### THE INEVITABLE COMPROMISE

THAT the result of the situation will be a compromise now seems inevitable, especially as the desire to repel the advances of German trade after the war is even stronger in England than with her present Allies, and to be able to do this some form of tariff discrimination must be devised. The exclusion of German trade by arbitrary rules and regulations is practically impossible. There is one feature of all this discussion that should be taken fully into account in all neutral countries: the rather peculiar condition that exists in connection with the English press. Practically all of the leading newspapers are in opposition to the present gov-

ernment and nearly all of them were committed to a "tariff reform" or protection policy before the war. These papers, many of them owned or controlled by a single man, are now conducting a vigorous campaign against the present government and using every argument furnished by the war—and there are many—to advance their plans for a protective tariff. The free trade Liberals are hardly represented at all in the public prints and it is remarkable testimony as to the sturdy individualism of the English people that notwithstanding the overwhelming predominance of the publicity powers of the opposition the Liberals remain in control and the principles of free trade retain a strong hold upon the mind of the public. The labor interests are the despair of the protectionists, for they cling largely and determinedly to the idea of continued free trade for England.

It is the present popularity of an attack upon German import into England that has given the protectionists renewed courage and inspiration, and the burden of their song is now the plea that a protective tariff is the only effective way in which this attack can be carried out. Their position is undoubtedly strong for this reason, but it must not be supposed that all England is now in favor of a protective tariff policy, as might be gathered from reading a majority of the leading English newspapers. The free-traders are for the moment decidedly on the defensive. They can suggest no way in which to meet German commercial attack after the war other than that proposed by the protectionists; hence as we have said the result will probably be a compromise. Before long England will become at least a low-tariff country, many of the schedules carrying protection to English industry and furnishing an opportunity for preference within the Empire. The tariff may be low but it will nevertheless mark a vast departure from the principle that has in recent years governed the collection of taxes at the English customs houses. If the experience of other countries is to be repeated this will be but the first step toward a full-fledged tariff law, the import duties becoming heavier with each revision until the inevitable reaction sets in, as has been the case in the history of tariff legislation in the United States.

In the meantime a new school of economists has come into being in Europe, notably in England. Entirely new principles are advocated under which all future trade arrangements are to be made. The laws of supply and demand have been scrapped and

their place is to be taken by present friendships or enmities. These are to be exprest in actual figures as contained in a sliding scale of import duties. Roughly outlined the scheme is something like this: Class A—Relative; B—Allies; C—Friendly neutrals; D—Neutrals; E—Enemies.

According to the London Chamber of Commerce the highest import duty should be thirty per cent. This is, of course, to be collected on enemy goods. As friendship warms these duties are to be decreased about five per cent at a time until in the end the "relatives," otherwise the peoples within the British Empire, are to pay only five per cent or perhaps to be given free entry for their products into the mother country. The attractiveness of the plan lies in its simplicity. It is not necessary to know anything about economics, foreign trade, international exchange or sources of supply to understand it fully.

In it are exprest as well all the human emotions, a vast accomplishment on the part of the designers of any tariff law. The bitterness of the war can be carried on into an indefinite future. Contempt for neutrals who selfishly attended to their own business and profited thereby can be exprest. Consideration can be extended to neutrals who perceptibly leaned to one side. Allies can be rewarded and to relatives an invitation can be given to join the family party at the banquet board.

#### PROSPERITY WITH COMPLICATIONS

THAT complications might arise in the carrying out of any such program does not appear to have occurred to the advocates of the plan. The difficulty of distinguishing the real origin of imports, constraint upon trade by the imposition of high duties when lower taxes would have been more profitable, the cutting off of needed supplies here and there, possible import retaliation on the part of other nations who imagine themselves aggrieved and the possible insistence of neutrals against manifest discrimination of political origin—all these possibilities and many more equally obvious do not enter into the philosophy of those who are thus planning for the reconstruction of European international trade. Well known and important people have endorsed this scheme for industrial and commercial safety and for universal happiness, as well as some semi-official bodies representing solid interests. Many of the newspapers have received the prospectus with rejoicing as ushering in a new era of

prosperity, a prosperity that is not to resemble the fall of the gentle rain from Heaven, inasmuch as it is only to come to the elect.

#### WHAT THE LEADERS THINK

It must not be understood, however, that the men upon whom fall the real heat and burden of government have given their adherence to any such plan. They have been most cautious in expressing themselves and chary as to any announcements of programs, to be adopted after the war. For this hesitancy they have been roundly abused, but as that is the lot of all politicians in Europe, especially in time of war, this abuse has failed to drive them into the open. The real situation is that such political leaders as believe in protection are now confident they will in the near future secure the establishment of the principle in British government practice and that is all they ask or even hope for to begin with. The free-traders in responsible position in public life are equally convinced that free trade as it has been in force in England for many years has met its Waterloo in the present war and can only save its face by compromise with the forces of protection.

These free-traders now admit with evident reluctance and considerable vagueness that at the close of the war England will probably adopt a system of import duties devised for revenue and carrying a moderate amount of protection for chosen British industries. There is no doubt, however, but that these same men, forced by expediency to a compromise on principle, view with disfavor this coming change in England's trade policy and regard with sincere apprehension its possible effect upon England's premiership in

international trade. They also fear the train of evils which follow in the wake of periodical tariff revisions by political parties with which other countries are already familiar and from which England has largely been free.

#### HOW WILL AMERICA FARE?

BEFORE the war the largest foreign traders were England, Germany, the United States and France, in the order named. In a natural state of things the trade relations between these four countries would be the most important of all international commercial relationships. The United States was England's best customer and from the United States came the larger part of English imports. The difficulty in the future in the making of commercial treaties will be to reconcile the differences between allies, neutrals and enemies, all represented in these four countries. In economic law there is no place for political or military enmities, for the needs of a people govern its exterior commercial relations. But the tenets of economic law are going to be subjected to considerable strain in the days of reconstruction. The hatreds of war and the friendships of allies are going to affect negotiations for some time to come.

Mr. Asquith has said that there is no threat to America in the agreement of the Allied governments to form an economic alliance, but Mr. Asquith is a pronounced free-trader, clinging desperately to his creed in times when many strong men are being driven from their economic moorings, and it is even possible that neither Mr. Asquith nor his party will be the instrument of British will when the time comes for the British Empire to formulate its after-the-

war policy and to seek entrance again into peaceful trade relations with all the countries of the world.

America will continue to sell surplus raw material and food stuffs to other countries that need them; but that is not the question that interests the American people, for the markets for such exports as these regulate themselves. It is the sale of manufactured goods that needs to be encouraged and provided for and in this respect the outcome of the present economic chaos in Europe is of the utmost importance and concern to American interests. It is true that discrimination against American export can be countered in America by discrimination against foreign import, but that is neither a profitable state of affairs nor constructive in results.

The laws of supply and demand will prevail in time thru the needs of all countries; for they exert a constant pressure on the mind of man and the laws of every country. The day of their supremacy can be hastened through the exercise of wise commercial diplomacy and the encouragement of home industry and export by giving freedom of action to American producers. If America can create the supply, in the sense that it is the best, the cheapest and the most available, the demand from foreign countries will satisfy itself in spite of all political efforts to divert the channels of trade from their natural course. Whether America will come under the classification of "friendly neutral" or just plain "neutral" is yet to be made known. Not only between the English and the Germans generally, but also within each of these nations, there is a serious difference of opinion in Europe as to that.

*South Water, Horsham, England.*

## THE YOUNG MEN LIE DEAD

BY MARY STEWART

The young men lie dead in the trenches,  
The young, young men lie dead.  
Their clear blue eyes glazed to the sunlight,  
Their soft brown eyes blinded in dust,  
Their strong arms limp, lifeless, and loveless,  
Their shoulders resistless and prone,  
Their swift feet all leaden and dull,  
Their glad voices choked with their own blood,  
No more shall they run to the day's work,  
And never shall answer love's call.  
The young men lie dead in the trenches,  
Dead, dead, in the trenches and still.

The young women walk dead in the houses,  
The young, young women walk dead.  
Walk dead thru the streets and the roadways,  
Their hearts and their voices are lifeless,  
Are dead to the quickening sunlight,  
To the might-have-been children stone dead.  
The life-joy is chilled in their bosoms,  
The life-cry is stopt in their hearts,  
And the call that might rouse it is stifled,  
Forever is silenced and dumb:  
For their young men lie dead in the trenches,  
Dead, dead, in the trenches and still.

WILLIAM DEAN HOWELLS, PRESIDENT OF THE AMERICAN ACADEMY

# AMERICAN ARTS AND LETTERS

BY ROBERT UNDERWOOD JOHNSON

SOME one has said that one of the chief difficulties in a democracy is to find and maintain the national ideals. The American Academy of Arts and Letters, in conjunction with its parent organization, the National Institute of Arts and Letters, constitutes a movement in the direction of envisaging and supporting ideals in literature and the arts which, as revealed by the public taste, are much too rare and vague. Our countrymen are to a fault generous and open-minded toward influences that come in the name of freedom and progress. Were they already grounded in the principles that underlie creative art—whether in writing, painting, sculpture or music—this catholicity would be an admirable quality. Without such principles their judgment is disturbed by the pretentious fads that aim to make the world over every twenty-four hours. No people are more desirous “to be shown” and the instability and superficiality of public taste are due primarily to the absence of well-reasoned criticism, and it is, in large part, to provide and supplement such criticism that an academy may be said to exist.

Having in mind the promulgation of the best standards in all these activities (by which is not meant their “standardization”), John Hay said that an academy was more needed in a democracy than in an aris-

*On the 16th and 17th of November will be held in New York the eighth joint meeting of the American Academy and National Institute of Arts and Letters, the most representative force of creative workers in America. Both bodies now have charters from Congress; a site in New York for their home has been provided by Mr. Archer M. Huntington and a substantial beginning of a building and endowment fund has been made by public-spirited citizens; and greetings of fellowship and felicitation have come from the British Academy and from the Académie Française and the Académie des Beaux-Arts. This article is written by the Permanent Secretary of the Academy, Robert Underwood Johnson, until 1913 editor of “The Century Magazine” and author of “Poems of War and Peace.”—THE EDITOR.*

tocracy, since in the former the deterioration of quality was more natural and easy. Doubtless he felt, with many of his associates of the American Academy, of which he was one of the first seven members, that there was a lack of nationality in our literature and arts due to the lack of what Mr. Brooks Adams has happily called “collective thinking.” In the broadest sense we call it national consciousness. The countries of Europe, such as England, France and Germany, have, each in its own way,

this definite individual aspiration, which Russia and, it must be confessed, America have not yet developed. There is every reason to expect that, with the freedom of opportunity and the spur of inspiration we shall reach an achievement of national scope in letters and the arts which will parallel the contemporary product of any other nation. But a condition precedent of this will be a clear understanding on the part of creative workers and of the public that art of any sort is the product of principles, whether formulated or intuitive, and not of fortuitous or empirical impulses.

The gold medal and seal of the Academy accentuate its purposes by the words: OPPORTUNITY, INSPIRATION, ACHIEVEMENT—a sequence of desiderata that make for the worth and dignity of writers, artists and composers. The aim to promote all three ideas has the backing of a twice-selected body of representative men, for the Academicians are chosen from the Institute, by which they were originally chosen on the theory that each had produced some notable work in his field. There is here no slavish imitation of the foreign academy of whatever country. The American conception of usefulness is inclined to regard an academy as representing merely “*otium cum dignitate*” (as the ease and dignity were not most desirable in letters

and the arts); therefore, there is much to be done, practically, as we say, in laying the foundations of its prestige by national service. Not only will such service gain it prestige, but in turn its prestige will enable it to be of service. It has a right therefore to appeal to the sympathy and support of those who have imagination to realize the value to the country of a reputable and permanent body capable of influencing conservatively the higher life of the people.

In the debate in Congress on the granting of the charter to the Academy last spring one Representative opposed the pretentiousness of a body of men so unknown to him setting themselves up as "immortelles." There are, no doubt, intellectual persons who think that an American Academy, even tho composed of those who, in the main, have done or are doing our most important work, is an impertinence; but they are not among those who have witnessed during the last generation the deterioration of taste and product incident to a more widespread interest in pictures and the written word. Prof. Bliss Perry has recently remarked the fact that with the exception of one short period there has never been in the United States any general interest in literature. Were the Academy and Institute aiming at institutional activity alone, they might well go under the ban of those who see no hope for better conditions thru organized effort; but they are endeavoring by sympathy and just recognition to stimulate good individual performance, to surround with fructating soil the seed of great talent, so that the Saint-Gaudens, the LaFarge, the MacDowell, the Stedman of the future shall blossom to an earlier and fuller beauty and robustness.

That the members of these two organizations have clear conceptions of their

## OLD HOUSES

BY EUGENE C. DOLSON

Along this road  
Are old houses  
Tenanted all the years  
Of a lifetime,  
But now utterly abandoned—  
Silent forever.

Back and forth  
The crows fly over them  
Or perch, unafraid,  
On their sagging ridgeboards.  
Their blinds are shut—  
Like the eyes of a dead man.

various arts and definite convictions of the perils that weaken and further threaten our civilization may be seen from the published record of their "proceedings" in the seven or more annual meetings. It is not mere technical excellence for which they are the solicitors. They are neither prophesiers of smooth things nor purveyors of pessimism, but while outspoken as to pretentiousness and charlatanry, they do not fail to set forth constructively the principles of their several

crafts. It is because these principles are to so large an extent common to the three great divisions of these organizations, Literature, Art and Music, that there is nothing incongruous in the unity of effort which they represent.

It is therefore to be counted among the achievements of the movement that it has brought together these various workers for discussion and joint action. This has not been mere "marking time." The same lawlessness that has attacked one art—the same rebellious defiance of all that has been gained in the Past—has summoned the thoughtless and adventurous against the others. Cubism, Futurism, Imagism, Prose-Librisism are rife in painting, sculpture, poetry and music. Apparently to an outsider the foundations of architecture have not yet been undermined—since a cubist or prose-librist building would obviously go to the ground. The sane body of opinion represented by the Academy and the Institute is not likely to give much quarter to these fads and eccentricities.

But it is not enough that a ship shall "repel boarders"; it must keep its fair course with a cargo worth the voyage. Already there are abundant signs that this unifying

movement has been inspiring to those within its membership, as well as to those without, and this inspiration will surely increase with the growth in material resources—for a home and an endowment are only the tools of the idea. At this time when the epic-tragedy of Europe is making every nation consider wherein its national concept is true or false, it is of great promise that we have an agency like these two bodies, qualified and moved to enforce upon our people that among the requirements of the true greatness of nations is a love of beauty and a respect for the things of the mind and the soul.

New York City

Drawing by the architects McKim, Mead & White

### THE HOME OF AMERICAN ARTS AND LETTERS

The American Academy and the National Institute of Arts and Letters propose to erect this building in uptown New York. The site, fronting on both 156th and 158th streets, has been given by Mr. Archer M. Huntington

# THE UNESCAPABLE LAW

BY WASHINGTON GLADDEN

I FIND myself quoted as predicting that the law of love will "ultimately govern" human relations. I should like to find room for a disclaimer. It would be just as absurd to predict that causes will "ultimately" produce effects, or that water will "ultimately" run downhill.

What I have been trying to make people believe is simply that the law of love is the law of life, the law of God; just as much the law of God as the law of gravitation; governing souls and communities just as truly as gravitation governs bodies; the organic law of human society, acting no less uniformly and inexorably than any other natural law.

The "near morality" by which the teaching of the Christian church has been largely disfigured and debilitated has assumed that the penalty of the moral law can be averted or evaded; that punishment is deferred; that God's laws which deal with human conduct are not now in force. They will *ultimately* govern human relationships, but they do not govern now. Consequently it is futile to try to obey them. By and by, in the Millennium, it will be possible to live by the law of love, but it is not now possible and any attempt to conform to it would be foolish and fanatical. If the law of love were only effective, it would, of course, be a good thing to obey it, but since it is not effective it is foolish to talk about it; and we must find some rule of life that is practical, and stop this nonsense of the visionaries and the idealists.

It is just at this point that straight thinking is needed. There is no deadlier error than the notion that there are laws of God which are for the present in abeyance—which do not now govern men, but which will ultimately govern them. Especially pernicious are all such conceptions when applied to the moral laws. In that, if in anything, we have a right to look for uniformity.

In truth this law of love is enforced upon every individual human being and every social group, larger or smaller, with absolute inflexibility. There has never been in any world a minute in which it was not in full operation; it has never been possible for any man or angel or any association of men or angels to escape it.

The mental muddle into which moral teachers have led the multitude is in the notion that the law is *not in force unless it is obeyed*. But it is *in force if its sanctions are effective, whether of reward or of penalty*. If it is true of any law that no man can possibly obey it without getting the

*The following article by Dr. Gladden raises and answers a very interesting question. It was called forth by a statement in a review of his last book which won the \$1,000 prize offered by the Church Peace Union for the best monograph by a minister on international peace. Dr. Gladden, as our readers know, was on the editorial staff of The Independent from 1871 to 1874. He is the author of many books on religious and social questions and has even dipped into fiction. He has now retired from the pulpit of the First Congregational Church of Columbus, Ohio, but his actual pastorate extends over the whole United States.—THE EDITOR.*

benefits which it offers, and that no man can possibly disobey it without incurring the injuries which it threatens, then that law is certainly in force. And this is palpably true of the organic law of human relationships. Obedience to it brings to the individual moral soundness and happiness, and to society peace and welfare. Disobedience to it brings to the individual moral deterioration and misery and to society strife and disintegration. It has never been uniformly obeyed or universally disobeyed, so that we have no complete demonstration of the consequences of obedience or disobedience; but there are evidences enough in human experience of the nature of its rewards and of its penalties, and abundant proofs that these rewards and penalties are annexed to all human conduct as closely as any effect is linked to its cause.

THE fatal failure of the Christian church has been its blurring of this central principle of morality. Not one in a hundred of its members has any comprehension of the immediateness and inevitableness of the operation of this central law of life. Nearly all of them suppose that if they do wrong they are liable to suffer for it some time in the future; scarcely any of them have been convinced that the consequences of evil doing are as quick and sure as the explosion of a short-circuited current. How many men know that if they lie they will get the reaction of that lie immediately in their characters; that every act or thought of selfishness, of cruelty, of impurity registers itself at once in their lives—blunts their sensibilities, dulls their perceptions, weakens their wills; that the accumulation of these deadly reactions must produce a steady deterioration of the

character? How many men understand that if all their neighbors governed themselves by the same principles of distrust and suspicion which they habitually practise there could be no useful social coöperation, because the natural and inevitable resentments and antipathies would rend society into fragments? How many people comprehend that the strifes and disorders and miseries which keep the world in turmoil are simply the natural consequences of disobedience of the law of good will. The tremendous industrial conflicts which are now desolating so many homes in New York and threatening the peace of the city—what are they but the penalty which the law of love inflicts on the community which permits its violation? But how many of the citizens of New York ever think of these strikes as penal consequences of the violation of the law of love? How many of them recognize the fact that *these disturbances of the peace are evidences that this law is in full force, visiting its retributions on all the communities that despise its authority?*

MOST appalling, most terrible of all the evidences that the law of love is in full operation is the terrific war now scourging humanity. This war is the answer of the Eternal Justice to the long defiance of the laws of life. The natural law of human relationships, which is the law of good will, of mutual service, binds all men and all groups of men, nations with the rest. It requires them to live in peace and unity, to share the good of the world, to seek one another's welfare. It promises well-being and abundance to those who obey, and *it threatens misery and destruction to those who disobey*.

With one accord the nations of the earth have set this law at defiance. They have refused to base international relationships on good will; they have insisted on founding them on suspicion and fear and enmity. They would not obey the law, but they cannot escape its penalty. Hell is the penalty of the disobedience of God's law and war is hell. Can any one conceive a pit more nearly bottomless than the nations of Europe have dugged for themselves, or hotter flames than those into which they are now plunging?

And the people of the United States, after watching this retribution for two years, are now making haste to set it at defiance!

It's a mad world, my masters!  
Columbus, Ohio

# THE SUNWISE TURN: A BOOKSHOP PLUS

BY HANNAH WHITE

SEPARATED from Fifth Avenue by about a hundred feet of sidewalk, but by an immeasurable difference in atmosphere, is the shop that most book-lovers have dreamed of, a place in which to meet old friends in books and to discover new ones, to browse alone by an open fire, or to discuss your literary hobbies—and incidentally, but never obtrusively, to purchase books you really want.

Such a bookshop is the Sunwise Turn—its appearance delightfully in keeping with its purpose. The low red-brick building, with a quaint tiled roof, wide leaded windows, and a big arched door, painted bright orange, gives a general effect picturesque enough to stimulate your curiosity, and the swinging signboard invites you to further inspection by its motto "The sunwise turn is the lucky one."

Inside there is no suggestion of a shop. The large colorful room looks as if it were really lived in—tho from the artistic point of view it is far superior to the usual living room. A long window seat, piled with cushions, an open fire, big, comfortable chairs, library tables, pictures and flowers all furnish a background for books—in low bookcases around the walls, on the tables and on the arms of chairs. The arrangement and color scheme of the whole room is adapted to the books; the vivid colors of the publishers' book jackets are combined in its decoration so as to make each book that comes in an integral part of the whole scheme. The walls are a clear orange, the floor a rather deep green, the purple window hangings, artistically spotty, are repeated and varied in numerous cushions; one of the big tables is a bright blue, another—a genuine old Exeter—is a dull brown; in one corner is a mahogany secretary of Colonial times, in another a "new art" fireplace. All of which sounds like a horrible jumble—and is consequently all the more remarkable as a distinctly restful, unified and very lovely room.

Interior decorating is in fact a supplementary business at the Sunwise Turn, which, by the way, is on 31st street, New York City. Mrs. Mary Mowbray-Clarke, one of the proprietors, is an artist by profession, a lecturer on art at Columbia University, and the author of the *Argonaut Art History*, a college text-book on the

works of art in their historical relations. Readers of *The Independent* ten or fifteen years ago will remember Mrs. Mowbray-Clarke as Mary H. Bothwell Horgan, author of several articles on notable artists and on various phases of art.

Mr. John Mowbray-Clarke, her husband, is vice-president of the Association of American Painters and Sculptors. His own sculpture is known both for its artistic value and for its revolutionary ideas; he has, in fact, acquired the title of "A Sculptor of Revolt—a man who has heard the trumpet call of the greatest battle of all history and has ranged himself upon the side of the hosts of Freedom and Progress."

Mrs. Mowbray-Clarke shares the responsibility of the Sunwise Turn with Madge Jenison, author of many stories and magazine articles. Then there is a large corps of young writers and artists who like to drop in frequently and ask if they may help. They form a sort of sub-committee of welcome, an informal discussion club, and on occasion a furniture-moving, floor-painting brigade. During the winter they plan to meet regularly an evening a week to sit and talk by the fire and sometimes to listen to informal lectures by such celebrities as Rabindranath Tagore, Wilfrid Wilson Gibson, John Ferguson, and Yvette Guilbert.

Another pleasant feature of the Sunwise Turn is its subscription membership, a plan by which the best books on any lines are sent to the people who want to read them and have no time to pick them out. This department is designed for the busy professional men and women, and for the booklovers who live in places re-

mote from the centers of current ideas and who want to keep up with the times. A characteristic subscriber is a recent college graduate just starting a missionary career in China. The Sunwise Turn will keep her posted on the new books on sociology and the poetry that she would read if she were here. No lists are sent to the subscribers for marking; the books simply come to them once a month or twice or four times a year.

The best thing about the idea is that it really works. People who are at a loss to choose from the multiplicity of new books just the ones they want to read are finding themselves more than satisfied with the books that are chosen for them. For as Mrs. Mowbray-Clarke explains, "We really know each one of our customers. And we read all the books before we sell them."

Children's books are tried out on real children; Dickie, the office boy, has become a critic of some renown in this respect. The publishers have learned to send their books to him for personal approval, and Dickie, going on fifteen, will be a literary personage before he knows it.

Older specialists in various fields are coöperating with the shop in the selection of books which they consider most valuable along their special lines—medicine, agriculture, psychology, feminism, music, history and folklore. Mrs. Mowbray-Clarke gives her advice on the art books. During its first week the Sunwise Turn sold ten copies of a book on art which she considered particularly good, a book for which the publishers had been able to find only the most limited market.

Next year the Sunwise Turn hopes to prove that several more of its new ideas are workable: to have on sale interesting paintings and sculpture by younger men and women in this country whose work is just beginning to be known; to "broaden our international art sympathies" by importing the best of European and Eastern books as soon as possible after publication and by keeping a bulletin of important literary news from England and the Continent; to have a department of advice on the decoration and equipment of private and club libraries; and perhaps to extend the shop into a garden.

THE SIGN OF THE SUNWISE TURN

## THE BURDENSOME BABY

How often have we heard mothers exclaim, "It is breaking my arm to carry this child!" It is to do away with this "arm breaking" element in carrying the infant that W. J. Sprong, of Los Angeles, California, has invented the unique and practical baby carrier shown in the accompanying illustration. This device is so arranged that it leaves the mother's arms entirely free. The carrier may be used in the home or upon the street, while the mother is doing the work about the house or when she is shopping.

This carrier has been so arranged

AN UP-TO-DATE PAPOOSE CARRIER

that it may be worn over or beneath a coat. The "basket" or the part of the carrier in which the baby actually sits, may be attached to or detached from the shoulder "harness" in a moment, the "basket" when rolled up taking no more room than an ordinary handkerchief. It is possible to carry children weighing as much as 40 pounds.

## RAW EGGS

One of the latest physiological discoveries will descend with something of a jolt upon the medical profession. It is impossible to calculate how many tons upon tons of raw eggs are consumed daily, upon the recommendation of physicians, by people who are seeking to regain health. Infants suffering from indigestion are frequently put upon an albumin diet. The raw egg has been considered invaluable as a food. Now comes the information from W. G. Bateman, of Yale University, that the uncoagulated white of egg is exceedingly indigestible. Experimental tests with dogs, rats, rabbits and men all show that raw egg white is not only difficult to digest but that taken in large quantities it causes diarrhea. And the eggs which the duck furnishes

us are no better than hen's eggs.

Just what the cause of the indigestibility has not been discovered, but the investigator does not believe it to be due to the texture of the egg white. A certain acclimatization, so to speak, can be acquired by some people after the ingestion of raw eggs for several days so that diarrhea ceases; still as a food raw egg white is not to be recommended. All that is necessary, however, to render egg white easily digestible is cooking. The yolk of the egg is easily digested either raw or cooked.

A BIG STUNT IN BRIDGE BUILDING—THE WIESSEN VIADUCT

## ELECTRIC HARVESTING

Nine farmers near Abilene, Kansas, put coöperation to a practical test this summer when they inaugurated the first threshing of wheat by electric power ever accomplished in the west—if not in the United States.

Forming a company, these nine farmers purchased a small motor and a separator. They rented a transformer from the central light company and also 1000 feet of cable. The separator was placed in the field, connected with the motor and the cable reached to the nearest light wire along the highway. The turning of a switch set the machinery in motion and the threshing was done at a cost of half the ordinary expense. The old fashioned engine requires a water boy, engineer and perhaps a coal hauler and is expensive to operate. The motor is clean, quiet, free

from fire danger and needs only occasional oiling. Over 1600 bushels of wheat a day were threshed easily.

## A RAILROAD IN THE AIR

The Wiessen Viaduct on the line from Davos to Filisur, a portion of the Albula Railroad in Switzerland, is one of the highest stone bridges in Europe. It carries the track at a height of 289 feet above the Landwasser River. If, even with this altitude, it is some three feet less in height than the Solis Bridge over the Albula, it, nevertheless, far surpasses it both in its total length of 689 feet and in the size of its central arch, which has a clear span of 180 feet. Unlike the round arches of the Solis viaduct, which rest upon abutments in the rocks, it is supported by lofty piers of built up masonry.

NINE KANSAS FARMERS USE THIS MACHINE TO HARVEST THEIR WHEAT

## All-popular sweets

**Y**OUNG or old, boy or girl, youth or maiden, man or woman—all people who have tasted Nabisco Sugar Wafers agree that they are sugar-wafer perfection. As accompaniments to desserts of any kind, Nabisco are always popular. In ten-cent and twenty-five-cent tins.

**FESTINO**—To the eye they are almonds. To the taste they are confections of the most delicious kind. A sugar-wafer shell with a creamy almond-flavored kernel.

**NATIONAL BISCUIT COMPANY**

## The New Books

### WHAT'S AROUND THE CORNER?

O. Henry, the author; William Sydney Porter, the man—in spite of their identity two distinct personalities, developed thru two widely differing sets of experiences—were linked by one ruling passion, the quest of "What's around the corner?" which furnished O. Henry with the theme of many stories and was Sydney Porter's nearest approach to a vocation. From the "somnolent little Southern town" of Greensboro, North Carolina, where he was born and raised, to the Texas prairies and the cities of Austin and Houston, to Honduras and around the entire coast of South America, for over three years in the Ohio penitentiary at Columbus, and then to Pittsburgh O. Henry followed this quest, until around the last corner he came into the Mecca of his imaginings, New York, or as he whimsically rechristened it "Little Old Bagdad-on-the-Subway," "The City of Chameleon Changes."

The salient facts in that quest, hitherto hidden by the pseudonym "O. Henry" and by Mr. Porter's desire to avoid anything like self-advertisement, have been admirably set forth by C. Alphonso Smith in his *O. Henry Biography*, which is pleasantly interspersed with the comments of the people who liked O. Henry and given the actual characteristics of one of the "American Kipling's" own stories by the frequent quotation of his "best bits" and by the sympathetic appreciation of the chronicler.

Some one once asked O. Henry why he did not read more fiction. His answer might serve—if it were needed—as an incentive to read this biography. "It (fiction) is all tame," he replied, "as compared with the romance of my own life."

*O. Henry Biography*, by C. Alphonso Smith. Doubleday, Page & Co. \$2.50.

### THE HINDOO TODAY

The cause of the Nationalist Movement in India would have been better urged by Lajpat Rai in *Young India* had he granted what does lie to the credit of the British administration. Impartial American writers, while admitting the British Government in India has been neither all wise nor at all times benevolent, yet hold that the work accomplished has been of manifest benefit to the whole people of India.

There are certain elements in Hinduism which Mr. Rai discreetly fails to touch upon, but concerning which Western civilization would like to possess definite information. Instead he paints the British administration as black as some Hindu practises we re-

## Eat Your Way to Health

Use Tyler's Macerated Wheat and Other Raw Foods Like I Did and Get Well.

Put iron in your blood and other organic mineral elements in your system so essential to life and health. That's why

**Tyler's Macerated Wheat** with other raw foods is so successful in relieving constipation and stomach trouble—restoring health—giving real and lasting strength, power and energy—reducing blood pressure—making you weigh just what you should.

Send 2c stamp for Raw Food Book and Health Guide or send 10c for Trial can of the food and book, postpaid. Better still, send \$1.00 for 1 lb. can postpaid anywhere. Satisfaction or money back.

**BYRON TYLER, 56 Gibraltar Bldg., Kansas City, Mo., U.S.A.**

Punch! Put pictures in *your* letters and forms. Easily done—without cuts—on the new mimeograph. And you get wonderfully clear, sharp, satisfying duplicates. A thin master sheet of dark blue paper—waxless, indestructible—has made the mimeograph the ideal all-purpose duplicating machine. Reproduces type-writing, longhand, ruled forms, sketches—on the same sheet—at one operation—without engravings or type-setting and distributing. Works at low cost, in your own office, to suit your time. Quick? A thousand copies done in a few minutes! Booklet "E" explains how the *improved* mimeograph will help you cut expenses—will widen your business horizon. Write A. B. Dick Company, Chicago—and New York.

## A Letter to the Groceryman.

Everybody being out, and Bobbie and Dorothy having taken possession of their father's office, Bobbie proceeds to do business.

"You're my st'nogofer," he says to Dorothy. "Take this dictation." And Dorothy, at the typewriter, takes this letter:

"Mr. Groceryman: Send me and Dor two packages of Strawberry

## JELL-O

and two packages of Orange Jell-O and two packages of Raspberry Jell-O, and send real Jell-O that says it's Jell-O on the packages, and not that other kind."

That is a businesslike letter and it shows, for one thing, that Bobbie knows what he wants—"real Jell-O"—and does not propose to take anything else in its place, as some older people do.

The air-tight waxed-paper Safety Bag enclosing Jell-O inside the package keeps the flavor at full strength.

There are seven different flavors: Strawberry, Raspberry, Lemon, Orange, Cherry, Peach, Chocolate. Each 10 cents at any grocer's or general storekeeper's.

A beautiful Jell-O Book telling of a young bride's housekeeping experiences will be sent to you free if you will send us your name and address.

**10¢**  
a package

THE GENESEE PURE FOOD COMPANY  
Le Roy, N. Y., and Bridgeburg, Ont.

frain from mentioning. He divides the India people of the present into three classes, the princes and landowners, for the most part degenerate and subservient to the British; the ignorant masses; and the middle class intellectuals. Hope for Indian Nationality, he contends, rests with the last mentioned.

*Young India*, by Lajpat Rai. B. W. Huebsch. \$1.25.

## WAR EAST AND WEST

*Some Experiences in Hungary*, otherwise a mild narrative suitable for a young ladies' seminary, contains an element of exceptional interest in a sidelight cast on the attitude toward the war of the various races comprising the Austro-Hungarian Empire. Thus, we gather that the Austro-Hungarian aristocracy were at most lukewarm toward it, holding that Berchtold was a fool if not a traitor to be drawn into the conflict. But since in, there was nothing else to do but trust in "Willy" to pull Austria triumphantly out. Meantime the best plan was to lock up all the grain in their storehouses for a rise in price. As to the Slavs and Ruthenes, they appear to have come out frankly pro-Russian with nothing risked but an occasional rebuke for their disloyalty.

After reading about these amiable Austrians and Hungarians, it is bewildering to take in hand *Kingdom of Serbia*, by R. A. Reiss. One wonders how it can be possible that people of the same kin should display such brutal inhumanity, until it is recalled that Miss Macdonald intimates the Serb was regarded by the Austrian as a kind of international gangster—the European hireling gun toter for all manner of evil dark night work. Whether guilty or not in this respect, such barbarous vengeance as is herein revealed stands without justification.

*Belgians Under the German Eagle* is the heaping of more fuel on the still burning fire of German atrocities. Once the Germans found themselves in possession of Belgium, it may be imagined it was no easy matter to control Belgian patriotism and resentment. Consequently reprisals of one form or another appear to have taken place which provide harsh reading. Quite the most curious revelation is the German mental mobilization of religious ministers, college professors and schoolmasters for propaganda war work. Thus, the Rev. Herr Busch thanks God for the touching example of the German sergeant, who, having ordered a man and woman shot, adopted their orphan child to raise in the faith of German *kultur*. Had Herr Busch been a Mohammedan *mollah*, one would have passed by the incident comprehending that such things are supposed to be pleasing to Allah, but for a Christian minister to praise God in this fashion simply beggars our understanding.

The publisher frankly announces that *The Backwash of the War*, a collection of war hospital sketches is "naked and loathsome," but contends that each is "faithfully true." True, possibly, to a mind which perceives nothing but what

## WEST INDIES CRUISES

Two luxurious 24 day cruises on specially chartered American steamers to Cuba, Jamaica, Panama and Costa Rica. Many delightful shore excursions. An ideal winter vacation. From New York Feb. 10 and Feb. 24. Price \$290 and up.

### FOREIGN TOURS

Including the principal cities and many points of unique interest out of the beaten track. Leisurely travel. Small parties. Frequent departures during the winter and early spring for South America, Japan and China, and South Sea Islands and Australasia.

## Build to Last It Pays

Strong, permanent construction, built to resist the "ravages of time," is the only kind that pays. Modern builders have come to realize the waste and inefficiency of cheap, short-lived structures. HY-RIB makes it possible to erect permanent, fireproof buildings at a saving of time, money and material.

In factories, warehouses, office buildings, stores, residences, garages, etc., HY-RIB simplifies construction, cuts down weight and saves valuable floor space.

HY-RIB is a steel meshed sheathing with deep stiffening ribs. Used for partitions, sidings, walls, roofs, ceilings, furring, floors, conduits, etc. Eliminates forms, studs and channels in all concrete work, saving labor and expense. The Hy-Rib sheets are merely fastened to the supports and the concrete or plaster applied.

Valuable HY-RIB Hand Book, full of useful information for prospective builders, sent to you free on request. Write for it today.

## CASH FOR OLD FALSE TEETH OR BROKEN JEWELRY

SEND us any diamonds, watches, old gold, platinum or silver jewelry (new or broken), false teeth (with or without gold), any dental fillings, painters' gold leaf cotton or magneto points. Nothing too large or too small. We pay in cash the highest possible prices. Can do this because we do the largest business of this kind in the country. Established 1899. Your goods returned at our expense should our offer be refused in 10 days.  
**Liberty Refining Co., 432 C Wood St., Pittsburgh, Pa.**

## What 15c WILL BRING YOU FROM THE Nation's Capital

The little matter of 15c in stamps or coin will bring you the *Pathfinder* for 13 weeks on trial. The *Pathfinder* is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world as it tells the truth and only the truth, now in its 24th year. This paper tells the full without omitting the prose; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, whole some, the *Pathfinder* is yours. If you would appreciate a paper which puts everything clearly, fully, briefly—here it is at last. Send only 15c to show that you want the cash a paper, and we will send it on probation 13 weeks. The fee does not apply if you are glad to have it. New Friends, Address: **The Pathfinder, Box 39, Washington, D. C.**

are introduced to us, from pious Moravian brethren to The Wolf, a sensible old man, who said he might "be a hundred years old, and that the fatigues he had undergone had affected him and made him look as old as he did." (Macmillan, \$3.)

## YESTERDAY AND TODAY

*Russia and Democracy* is an enlightening account of Russian politics in the past two centuries. A. de Wesselsky, analyses the hatred of Germany, widespread in Russia long before the war, and traces its causes back to beginnings in the days of Peter the Great. (Duffield, 75 cents.)

*The Nullification Controversy in South Carolina*, by Chauncey S. Boucher, of Washington University, is a history of the attempt of the State Rights party in South Carolina to nullify the high protective tariff of 1828 by a state veto. The chief sources for the study are files of the contemporary Unionist and Nullificationist newspapers. (Univ. of Chicago Press, \$1.50.)

Lectures delivered in this country by Shosuki Sato, exchange professor in 1914, are now published under the title *Some Historical Phases of Modern Japan*. These give much information as to economic and social conditions and governmental changes, but nothing either new or definite on international ideals and intentions. (Japan Society, N. Y.)

The special interest of the *Dated Alexander Coinage of Sidon and Ake* lies in the dates, in Phoenician characters, under the seat of the reverse. A multitude of such coins were found with Alexander's effigy. Eleven plates of gold, silver and copper coins selected from European and American museums are appended to this scholarly work by Edward T. Newell. (Yale Univ. Press, \$3.)

*A History of the Third French Republic*, by Prof. C. H. C. Wright, is a brief narrative of the political life of France from the beginning of the Franco-Prussian War to the opening of the present struggle. It recounts in detail, tho with little background, the rise and fall of the numerous cabinets and coalitions which have had in their charge the destiny of the republic. (Houghton, Mifflin, \$1.50.)

Dr. William L. Davidson's study of *Political Thought in England* is devoted to the Utilitarians, their philosophical and political theories, and their work in furnishing ideas which public men embodied in concrete reforms. Much of the book is devoted to the interesting personality of Jeremy Bentham, perhaps the most fertile man who ever lived in concocting suggestions for legislators. (Holt, 50 cents.)

*A Short History of Germany*, by Ernest F. Henderson. This narrative, which, in the edition of 1902 ended with the foundation of the modern German Empire in 1871, has been continued to the outbreak of the Great War, and describes "a whole new era from its conception to its end." The economic and social progress of the united Empire is given as much space as the political history. (Macmillan, 2 vols., \$3.50.)

*French Policy and the American Alliance*, by Dr. Edward S. Corwin, is a careful account of the negotiations which brought France and Spain to become allies of the rebellious colonists and thus assured their victory in the Revolutionary War. The main thesis is that the French Government was moved to this action by the desire to strike a fatal blow at the prestige of Great Britain and make France the leading power in the European concert. (Princeton Univ. Press, \$2.)

Every student of political science will be interested in *Principles of Constitutional Government*, by Frank J. Goodnow, president of Johns Hopkins, and recently adviser to the government of the Chinese Republic. Particular study is given to the federal government as it exists in the United States, in Germany and in the British self-governing dominions. An appendix contains the text of the present constitutions of the United States, France, Germany, Belgium and Japan. (Harvard, \$2.)

GOOD HEALTH PUBLISHING CO.

## SāVō Air Moistener

Fill with water, hang on back of any radiator out of sight. Converts dry indoor air into a moist, wholesome, healthful atmosphere. Will save your Health, Furniture, Piano, Paintings, Wall Paper, Plants, etc. Three Sizes, \$2.00, \$1.75, \$1.00.

Write for Free Booklet

Savo Manufacturing Co., 39 So. La Salle St., Chicago, Ill.

LET us send you, without cost, a little booklet which tells the remarkable story of Sanford Bennett, a San Francisco business man who seems to have solved the problem of prolonging youth. At 50 Mr. Bennett was partially bald, his eyes were weak, his body was worn out, broken down—he was a decrepit old man. Today, at 70, he has a thick head of hair, his eyes are remarkably strong, and he is in perfect health, a good deal of an athlete and as young as the average man at 35.

## Illustrated Book Free

How Sanford Bennett accomplishes these wonders by very simple exercises, which he practices for about 10 minutes each morning. The morning is told in a readable 100-page, illustrated booklet, written by Mr. Bennett himself. It is all contained in the book, and you can find no other information about Mr. Bennett and his remarkable life. It is an interesting and instructive story, and a good deal of other, useful, free booklet, and you can get it without cost. Address: Physical Culture Publishing Co., 3411 Flatiron Bldg., N. Y. City.

National Headquarters:

200 Fifth Avenue

New York City

totally efficient—and as crudely self-satisfied as efficient people often are—we should, no doubt, preach a gospel of inefficiency! But that time is a long way off. The principal value of perfection lies in our struggle to reach it. Therefore till the millenium we may wisely hold perfection our one great ambition.

We consider the over-emphasized, over-idolized, over-developed brain the top-notch menace to health, character and usefulness. The intellectual person needs a gymnasium, a hospital, a battlefield and a church, to keep him sane. The body, heart and soul must together animate the brain, if our thinking comes to anything. Teach your studious boy manual training, social service, and boxing! Then he may get somewhere in life.

347. Mr. L. W., Ohio. "I own and operate a small farm. Have taken normal training and taught school successfully. Am thirty-three, married, have three children. Enjoy farming, but want to do something of more benefit to humanity at large. Am thinking of journalism or lecturing. What are the qualifications of a journalist? What training would I need? Shall be thankful for any advice."

We should consider it unwise for a man of your age and family to enter a profession altogether new. Why not prepare to be a lecturer and organizer among farmers, employed by a farm efficiency bureau, an agricultural journal or institute, or an experiment station of an agricultural college? A good start would be to send contributions to farm papers—you might later qualify as editor of one of these; obtain list, and sample copies, by consulting a newspaper annual and directory from a nearby newspaper office. You would probably read with interest Question Box answer No. 138, in Independent of September 6, 1915, and answer No. 167 in Independent of November 1, 1915. Get books on farm management, intensive farming, coöperative farming.

348. Miss H. V., New York. "Kindly inform me how a girl in third year high school would prepare to fit herself for a private secretary or traveling companion to a lady."

You might learn stenography and typewriting, then obtain a position with a good business firm, and study by mail or at night school higher branches—such as accountancy, bookkeeping, office management, or business correspondence; applying for a better position when fully qualified.

A residence course in a business college, followed by a residence or mail course in a secretarial school, would probably train you best and soonest. Among the business colleges in New York are Pratts, 62 West Forty-fifth street; Drake's, 154 Nassau street; Moon's, 587 West 181st street; Normal Commercial, 146th street and St. Nicholas avenue; Miller's, 131 East Twenty-third street; Woods's, Fifth avenue and 125th street. Among the secretarial schools are the Fifth Avenue, 509 Fifth avenue; The Knickerbocker, 16 West Forty-fifth street; The New York, 35 West Forty-second street.

Prepare to become a secretary—not a traveling companion. There is no future in the latter position.

349. Prof. J. C. L., Pennsylvania. "We have a boy who seems unusually gifted in music and literature; but perverse in temper and unable to get along with his teachers, who punish but not inspire. (a) Can genius be developed in a child? If so, how? (b) Do you not consider the public school system woefully lacking in the proper means for discovering and evolving the special talents of children? (c) Could a scientific home training supply these deficiencies?"

(a) While genius must be inherent, and no system of education could implant it, the discovery and development of genius belongs in the scope and duty of the public school system. Thousands of misunderstood, maltreated children have genius, or talent of a high order, and never amount to anything because their teachers were fools. This matter is discussed on pages 21 to 31 and elsewhere in my book "Efficient Living," also in my paper on Genius and Eugenics recently delivered before the American Association for the Advancement of Science. Both may be had thru Efficiency Publishing Company, Woolworth Building, New York. However, no plan has yet been produced for training genius in the public schools.

(b) Answered under (a).

(c) To a large extent. See writings of Prof. Boris Sidis and of Mrs. Wundt Sackville Stener, each of whom has done remarkable things with a supernormal child.

# The Market Place

## IN THE STOCK MARKET

The market for securities is still a broad and active one, daily transactions on the New York Stock Exchange exceeding a million shares, as a rule. There was an exception on the 31st ult., when the number fell to 940,000. While the price movement has been irregular, its tendency has been upward, especially so far as industrials or war order shares are concerned. During the week that ended on the 4th inst., much influence was exerted by the Steel Corporation's report of net earnings for the September quarter, showing a gain of nearly \$5,000,000, altho the preceding quarter's net had been the greatest in the company's history. Steel common shares, which were 117¾ at the beginning of the week, rose to 122¼, but afterward declined to 120½. Copper mining shares were favorably affected by a report that the French Government was about to place a large order for the metal. On sales of a few hundred shares Bethlehem Steel advanced to 678, gaining 25 points in one day. News of a new order given to the American Locomotive Company for 1,000,000 time fuses, with an option for 2,000,000 more, added 4¼ points to the price of that company's stock on the 3d.

Reports of railroad earnings were quite favorable, and railroad shares were firmly held, but without any considerable advance. It was generally admitted that price changes were due in part to the interest of traders and investors in the political campaign and the approaching election. Some were unwilling to carry stocks because they feared the effect of a possible change at Washington; others invested because they were confident that the result of the election would support prices.

## STEEL PROFITS

At the meeting of the United States Steel Corporation's directors, on the 31st ult., when the September quarter's net earnings were made known, an extra dividend of 1 per cent on the common stock was declared, in addition to the regular quarterly dividend of 1¼ per cent. A similar extra allowance was made three months ago, and therefore the distribution for six months has been at the rate of 9 per cent a year. The quarter's net earnings were \$25,217,067, which may be compared with the June quarter's \$21,126,043, and the March quarter's \$20,713,624. To these great sums have the company's profits risen from only \$12,457,

# Cut Your Selling Cost

Bound in Fine Cloth,  
Liberal Illustrations

You can't sell many goods nowadays with a sales department of the happy-go-lucky school. You must have a sales force working along scientific and efficient lines.

Why do such men as Gage Tarbell, Condé Nast, Hugh Chalmers, John H. Patterson make good in the capacity of Sales Managers of concerns whose volume of business runs into the millions, while other men of seemingly equal opportunity make a fizzle of their jobs?

They apply scientific sales management to their problems. They tackle the job in a cold-blooded, calculating, systematic way, and they get every member of the sales organization working with them to accomplish a certain task. That's all there is to it—efficiency.

You can do the same things in your business that these men have done in theirs if you will apply their methods. Charles W. Hoyt has written a book called "Scientific Sales Management" which covers in the most comprehensive manner the principles discovered and endorsed by the biggest men in commercialism today.

## A book of results—not theories

"Scientific Sales Management" does not deal in opinions or theories, but embodies the results of the wide experience of the author as a successful salesman, sales manager and executive—combined with the experience of many master sales managers with whose work he has been intimately familiar.

The underlying principles of sales management—the reasons behind every plan and movement—are classified and explained so fully and clearly that every man who directs salesmen has a safe, reliable guide to the attainment of satisfactory sales-volume at a low cost-to-sell.

The pages of "Scientific Sales Management" lay bare the success secrets, back of the campaigns that have built up the biggest businesses in America, that have captured golden markets, that have paid enormous dividends over a long period of years.

From the methods employed in these campaigns Mr. Hoyt has deduced the essential principles which you can successfully apply to your selling problems.

## Titles of the Chapters:

Two Kinds of Salesmen—the Old and the New  
The Principles of Scientific Management  
What Is Scientific Sales Management?  
Cooperating with the Salesmen  
Creating Territory Regularly  
Selling a Product or Service  
The Art of Selling in an Advertising Campaign  
How to secure the salesman's cooperation in an Advertising Campaign

## What this book means to you

There's an immense amount of value in this book for everyone who has anything to do with sales—the manufacturer, jobber, sales manager, or the salesman who expects to become a sales manager.

Think what it means if you, through this book, were enabled to reduce your cost to sell anywhere from 1 to 5%. It shows you how to make salesmen closers, not missionaries. Shows how to get big results by properly training the average salesman. It eliminates waste.

## Evidence of its great value

This book has been purchased by and has proved of valuable aid to such nationally known concerns as

General Electric Co.	Butler Bros.
Burroughs Adding Machine Co.	International Silver Co.
Westinghouse Elec. & Mfg. Co.	Cluett, Peabody & Co.
Knox Hat Co.	Thomas A. Edison, Inc.
E. I. DuPont Powder Co.	Packard Motor Car Co.
United Drug Co.	Goodyear Tire & Rubber Co.
Welch Grape Juice Co.	Simmons Hardware Co.
Yawman & Erbe.	Oliver Typewriter Co.
Chalmers Motor Car Co.	A. G. Spaulding & Co.
	National Cash Reg. Co.

"Teaches the executive how to get efficient results from the work of a sales force and the principles which Mr. Hoyt lays down apply with equal force to the small and to the large concern."—*Los Angeles Weekly*.

"This book will interest any salesman or any merchant or manufacturer."—*San Francisco Chronicle*.

Going up?

-or down?

HERE is your future charted for you, based on the actual average earnings of trained and untrained men.

Which way will you go—up, through training, to a position that means good money, or down, through lack of training, into the ranks of the poorly paid?

It rests with you. And now is the time to decide. Not next year, not next month, but now. You can get the training that will command a trained man's salary. The International Correspondence Schools have helped hundreds of thousands to qualify for advancement. Let them show you how you can prepare yourself, in your own home, for the position you want in the work you like best.

Just mark and mail this coupon. It will be the first step upward. Mark and mail today.

**AN INCOME FOR LIFE**

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

000 in the first quarter of last year. Here we see a total of \$227,000,000 for nine months of 1916, against \$79,000,000 for the corresponding months of 1915, and only \$60,000,000 for the first three quarters of 1914. And the earnings are growing, for the monthly record was broken by September's \$30,420,000. The balance available for dividends on the common stock in the September quarter was equal to 12.45 per cent on the outstanding \$508,302,500, or to an annual rate of 49.80 per cent. The nine months show a surplus of \$132,000,000, and in corresponding months of 1914 there was a deficit of \$11,000,000.

The full capacity of our steel mills is in use, and it will be increased by plant additions soon to be completed. Great quantities of steel to be used in European munition factories are exported. Negotiations for 600,000 tons are now pending. In October, 1,387 locomotives were ordered, this number including 1,000, which are to go to Russia. There were orders in the same month for 20,942 cars, making a total of 145,177 since January 1. In the ten months, 3,628,000 tons of rails have been sold, against 2,672,000 last year and 1,501,000 in 1915. Our railroad companies are buying more freely. Steel and iron prices are steadily rising. There were sharp advances last week in the pig iron and coke markets.

ANOTHER BRITISH LOAN

The books for subscriptions to the new British loan of \$300,000,000 were closed on the 4th, four days before the date tentatively named, because the applications were already more than sufficient. They came from all parts of the country and many were from the Middle West and Northwest, where, it will be recalled, the original Anglo-French loan encountered much opposition. This new loan, at 5½ per cent, half of it for three years, offered at 99¼ and yielding 5.75, and half for five years, offered at 98½ and yielding 5.85, is secured by a deposit of \$360,000,000 worth of securities with the Guaranty Trust Company. Half of these are American and Canadian bonds and stocks, while the other half includes the bonds of Australia, South Africa, New Zealand, Argentina, Chili, Cuba, Egypt and India. The offering was made by J. P. Morgan & Co., with whom were associated twenty banks, trust companies and banking firms.

As it was said not long ago by an officer of the British Government that \$10,000,000 a day was required to pay for war supplies ordered here, the new loan will satisfy the demand for one month. It will cause a suspension, for a time, of the gold shipments from Canada. These have been the greater part of the \$483,000,000 received since January 1. Prompt oversubscription shows a demand here for such bonds, with an intelligent estimate of their value and that of the deposited securities. The loans made in this country to foreign nations, provinces and municipalities since the beginning of the war now amount to \$1,931,000,000.

DIVIDENDS

**THE CRESSON CONSOLIDATED GOLD MINING & MILLING CO.**  
Dividend No. 49.  
Amount, \$122,000.00.  
Total amount to date, \$3,916,162.50.

# Insurance

Conducted by

W. E. UNDERWOOD

## STATUS OF UNION CENTRAL MATTER

For the information of several readers who have made inquiry respecting the status of the Union Central Life Insurance Company's capitalization matter, I will briefly summarize: On March 1, 1916, the company increased its capital stock from \$500,000 to \$2,500,000 (following an increase in June, 1908, from \$100,000 to \$500,000), and declared a stock dividend of \$1,500,000, thus paying up the capital to \$2,000,000 and leaving \$500,000 stock in the treasury. During the summer, Hon. Burton Mansfield, Insurance Commissioner of Connecticut and president of the National Convention of Insurance Commissioners, appointed a committee composed of the commissioners of Ohio, New York, Massachusetts, Connecticut, Virginia and Missouri to examine the books of the company for the purpose of determining the regularity of the proceeding. Actuaries and accountants went to work on the company's records early in August, and the expectation was that the committee would report its findings to the convention at its annual meeting held at Richmond, September 25. The announcement then made was that the committee had been granted further time, which would indicate that it has not concluded its labors. Since then, I am informed, arrangements have been made by the committee to grant a hearing to the company on November 9 at New York. This would seem to imply the completion of the report and a desire by the company to debate at least some of its conclusions.

E. E. S., Marine, Ill.—Send your full name and I will reply by mail.

A. R. B., Lancaster, Pa. At age 31 the premium on \$1000 Ordinary Life is \$23.71. The term premium (20 year), same amount, is \$12.91. Difference between the two, \$10.80. This difference deposited at 4 per cent is worth \$331.48 in twenty years. The cash value of the Ordinary Life policy at that time is \$286. The combined term policy and savings deposit yields \$18.48 more at the end than the Ordinary Life. Notwithstanding which I regard the latter as of more practical value to nine out of ten people because assuming the stability of the bank—they will not faithfully expect the difference between the two premiums for twenty years.

The tenth annual meeting of the Association of Life Insurance Presidents will be held at the Hotel Astor, New York, December 14 and 15. Invitations have been sent to the executive officers of all the life insurance companies of the United States and Canada, to the insurance commissioners of the various states and to the heads of various life underwriters organizations and associations.

Gray "D Jr."

Now Ready

## Your New 1917 Marine Engine

**Yours** because the "D Junior" embodies what your ideal engine calls for—something newer—something better.

**Power?** Yes, tremendous—more power than ever before developed with the same bore and stroke—figures prove it.

**Quiet?** Absolutely—no harsh bark—no discordant clatter—only the soft, even purr of an electric motor.

**Clean?** Perfectly—all moving parts enclosed oil tight—summer white apparel for the ladies possible here.

**Control?** Perfect—electric starter if desired—from highest speed to lowest at a touch of the throttle—an engine a girl can operate.

**Speed?** All you want—more snap and pep than ever before shown in a Marine Motor.

**Price?** Surprisingly low—quality considered. GRAY facilities and quantity output the sole reason.

**Yes,** and with it all "D Junior" gives you motor excellence of a degree that furnishes a new sense of boating enjoyment.

## Let These 3 Books Help You

## Products of 225 Leading Boat-Builders to Choose From

The "1916" Boat-Builders' Catalog, published by the Gray Motor Company, in conjunction with the leading boat builders throughout the United States and Canada, shows more boats than you could see at any motor boat show—from a little fishing launch to the most handsome express runabout or cruiser with all the comforts of a home. It also tells you where you can buy the kind of boat you want at the price you want to pay.

**Gray Marine Motors** The new marine engine catalog shows a complete line of both 2 and 4 cycle Guaranteed Gray Motors—3 to 90 H. P.—1 to 6 Cylinders with every feature you have ever hoped for in a marine motor.

**Gray Book of Boats** No theory here—all actual practice. This book solves hundreds of problems that confront everybody considering either a hull or engine.

These three books will be sent free to anyone writing for them.

**Gray Motor Co. 1156 Gray Motor Bldg. Detroit, Mich.**

## The University of Chicago

HOME STUDY

in addition to resident work, offers also instruction by correspondence.

## LATSHAW SCHOOL For Backward Children

This school has discovered original methods of growing mind and body and has proven that feeble-mindedness is curable. Do you want your child to become bright, interesting and happy, with a possible future of usefulness? Come and see for yourself. \$1200 up.

ALLEN LATSHAW, Founder, "The Maples," Berwin, Pa.

## BUSINESS ENGLISH.

To be able to write a business letter with your ideas properly connected, to have every word the choice word, every term one that cannot be misunderstood—this is a great accomplishment. Master-letters from men who have the capacity of expressing much in a single sentence are studied in this course. Write Emerson Ext. University, Inc., Charleston, W. Va. for particulars.

## Double Offer on Typewriters

Our prices on factory-rebuilt typewriters, guaranteed in writing for satisfactory service, range from \$4 to \$6, manufactured prices for new machines which can give more satisfactory service than ours.

Our rebuilt models include Royal Standard, Remington, Underwood, I. C. Smith and Remington Verbalde-Waters at \$4 to \$6. With every machine sold we offer a new polished oak type writer table with drawer and sliding leaf at half regular retail price.

Send for our illustrated catalog. MINNEAPOLIS TYPEWRITER EXCH., Dept. L., 316 Third Avenue, So. Minneapolis, Minn.

# A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

AS a slinger of language it would be hard to find the equal of Thomas J. McCormack, of La Salle. Where did he learn the art, at Princeton, Leipzig or Chicago? The Schoolmasters' Club of Peoria were reckless enough to invite him to talk to them, and he did talk to them—like a Dutch uncle, or a Latin one. I pick out for quotation three of the milder paragraphs of the speech as published in *School and Home Education*, of Bloomington, Illinois:

Fashionable educational practice is now playing hand and glove with weak humanitarianism and plutocratic politics. *Panem et circenses* Juvenal called the crumbs of civilization that the Roman Croesus threw to the Roman rabble, and *panem et circenses* are the educational bone that the new practical theorists in American education are tossing to the intellectually famished *Canis americanus juvenalis*. It is a sleek pup and takes its bone voraciously. The blood that coursed in the Bacchic, Astartean dances of Syria still runs deep in our veins. The pulses that throbbed at the gladiatorial spectacles of ancient Rome and at the bull-fights of Madrid are still the primal pulse. The stomach that ached at the medieval barbecue is still the primal stomach. Shall we give him Latin? No, give him a folk dance, transfigured by art. Shall we give him algebra? No, give him a bath, and his freshened, aseptic, mollescent hide will illumine with spiritual phosphorescence his environment to all posterity.

And so the organized forces of society are marshaled to cater in our schools, with a tapping Puritanic timidity as to theory, and with diabolic thoroughness as to method, to the ideals of a new sensuous paganism. *Carpe diem*: Wash and be saved; eat and be aureoled; dance and receive extreme unction! And somber conventions of lugubrious pedagogs meet to discuss the technic of administering pie to the microcephalous, and paper towels to megapods. And the statisticians of the teachers' colleges tabulate the results and inductively prove the consequent ascension of the phrenogastric level—a rare psychologic truth which Genesis says even Cain knew before he smote Abel the historic thwack i' the midriff. And the magazines applaud and the women's bureaus applaud, and timid educators construct everywhere wobbling curricula for the incorporation of the new "ideas." And the softening of the public brain goes on apace, and the "leaders of thought" kowtow to the idols of the Cave. And rarely a soul has the intellectual courage to stand up and utter in solitary majesty the reasonable words, "Bunk, ineffable bunk!" Rarely a soul has the courage to commit this act of lese-pedagogy!

The lustration of the rabble, the distribution of *panem et circenses* to the social dog, barring the subtle insult, involved, and even the art of titillating individual midriffs, which some advanced schools affect, are legitimate fields of collective activity in an imperfect society. But they are political and commercial functions of the state, like street-cleaning, the administration of poor-houses, the construction of sewers, and should not be suffered to asphyxiate or eclipse purely educational activities of the intellectual, ethical and vocational type.

I guess he means the same as President Wilson of Princeton University when he said that the side-shows were swallowing up the main tent. And it does look so when we see the gymnasium towering over all the other buildings, the football coach and the dancing master getting bigger salaries than the

professors and the "students" petitioning the president to abolish all afternoon laboratory work because it interferes with team practice.

..

In this country there has been a great deal of discussion as to whether Master's *Spoon River Anthology* is or is not poetry. But while we are talking about it the Australians, being a people of practical and energetic temperament, are settling the question by turning it into real recognizable verse. This is the way the life history of Margaret Fuller Slack, the druggist's wife, comes out in the style of an earlier "Elegy in a Country Churchyard":

With deep-set eyes, far-searching, I would sit.

A mute, inglorious Eliot, chin on hand,  
(As photographed long since by Pennéwit)  
Till wooed by Slack, who let me understand

That leisure would be mine for writing Works.

I bore his children eight, no time to write.

A needle pricked me, washing baby's serks.  
Lockjaw, ironic death. Oh, sex's spite!

Or if the reader prefers the dish served *a la Wordsworth* he can get it in eighteen stanzas of which the *Sydney Bulletin* prints the first and the last two:

1. Now Margaret Slack had surely been  
An El-i-ot, no less,  
As mark her chin by hand upheld  
In a wise passiveness. . . .
17. (A needle in the baby-clothes,  
Half hidden from the eye,  
Sharp as a thorn when only one  
Projects its point on high.)
18. And oft to me it did appear  
A somewhat bitter fate,  
That she should die from lockjaw when  
She bore him children eight.

..

We seem likely to get the Danish West Indies, altho Barkis of Denmark is still unwilling. The next question is what we shall do with them. This is what the inhabitants are anxious about, and even Uncle Sam, rich as he is, cannot be altogether indifferent to the possibility of making something on his \$25,000,000 investment in the Caribbean.

There is no doubt but Yankee ingenuity would find ways to make the islands pay. My own notion—which I am willing to share with anybody who will furnish the capital—is to start a sugar diet sanitarium. They tell me that fresh cane juice is a sure cure for dyspepsia and all wasting diseases. The little pickaninnies who chew bagasse chips all day and have no other food get fat and slick by the end of the season. This ought to beat the grape or whey cures that have made the fortune of European health resorts. Sugar cane is cheaper than either and more nutritious. In my mind's eye I see a big hotel on the beach

at Frederiksted behind a row of royal palms and on the Saratoga veranda a line of rocking chairs containing pseudo-invalids of various ages, each sucking a sugar cane at the rate of \$10 *per capita per diem*.

Charles Kingsley, in his delightful sketches of the West Indies, is hard on the town of Charlotte Amalia, which he calls "a veritable Dutch oven for cooking fever in, with as veritable a dripping pan for the poison when concocted in the tideless basin below the town, as man ever invented." It is true that St. Thomas in those days had as bad a reputation for disease as Colon, but now both places have reformed. As soon as it was discovered that the yellow fever was due to the fatal fondness of the Lady Stegomyia for administering hypodermic injections it became a comparatively easy matter to suppress her pernicious activity. Besides being equally free from tropical diseases, St. Thomas has the advantage of Colon in the matter of climate. It is not so hot and it is not so humid. Colon has over ten inches of rain a month. St. Thomas is arid and could compete with Arizona or southern California as a health resort.

Since the war began the Bermudas are not so pleasant as they used to be and those who are seeking to escape the northern winter might go further and fare better. With a mermaid film to advertise the fine bathing facilities the Danish Islands—what shall we call them when we annex them?—ought to draw Americans by the thousand and provided a congenial occupation for the islanders. The soil is hard to work. Tourists are not.

..

Somebody who wants to teach me Spanish for \$7.50 sends a circular saying:

Spanish conversation positively guaranteed. This does not mean that after thirty lessons one masters the Spanish language, for perhaps no one save the great Cervantes has yet done that, but it does mean that a good working vocabulary of about 800 words is given.

Cervantes was doubtless a smart chap but I doubt if he mastered the Spanish language in thirty lessons. Even the English language is not so easily mastered as it seems.

..

On the third day out from New York, when the sea began to roughen a bit and the ship to pitch about, the passengers watched the Christian Scientist to see if her moral character would sustain her in this hour of trial and temptation. After a while she disappeared into her cabin, from which she did not emerge till near the end of the voyage. Then in response to congratulations and sympathy she confessed that she had never known "a more disagreeable and persistent form of error."

J U S T A W O R D

The rather remarkable sample of "Everyman's Office," published on the cover of The Independent for this week, is really illustrative of efficiency in photography as well as in housing business men. The photograph was taken with a telephoto camera, placed at Times Square, near Forty-second street, and it includes practically the whole of business New York. The skyline of lower Manhattan, in the background of the picture, was four miles or more from the camera and the mushroom-like water tanks in the foreground were almost beneath it.

RAINY DAY, BY L. H. BAILEY

The soft, gray rain comes slowly down,  
Settling the mists on marshes brown,  
Closing the world on wood and hill,  
Drifting the fog down vale and rill;  
The weed-stalks bend with pearly drops,  
The grasses hang their misty tops,  
The clean leaves drip with shiny spheres  
And fence-rails run with pleasant tears.

Away with care! I walk today  
In meadows wet and forests gray;—  
'Neath heavy trees with branches low,  
'Cross splashy fields where wild things grow,  
Past shining reeds in knee-deep tarns,  
By soaking crops and black-wet barns,  
On mossy stones in dripping nooks,  
Up raining pools and brimming brooks  
With waterfalls and cascadills  
Fed by the new-born grassy rills;—  
And then circle home across the lots  
Thru all the soft and watery spots.

Away with care! I walk today  
In meadows wet and forests gray.  
—From "Wind and Weather," published by Charles Scribner's Sons.

T H E N E W P L A Y S

Major Pendennis is pleasantly reminiscent of Thackeray's novel. John Drew at his best, with an excellent cast. (Criterion Theater.)

Getting Married. The wit and pseudo-wisdom of Bernard Shaw delightfully portrayed by William Faversham, Henrietta Croman and Company. A highbrow feast. (Footh Theater.)

So Long Letty. Much advertised ultra Broadway musical comedy of girls, costumes and clever stunts built around one catchy tune. Inane, vulgar and smutty. (Shubert Theater.)

The Barker. A mildly amusing comedy of the British aristocracy. Gives Cyril Maude only a moderate chance to display his ability. Not very good and certainly not very bad. (Empire Theater.)

REMARKABLE REMARKS

HENRY FORD—I am not interested in parties at all.

PROF. WILLIAM M. SLOANE—Jingoism is a disgusting vice.

GENERAL VON HINDENBURG—The main thing is discipline.

GENERAL BRUSILOFF—The future is in the hands of God.

WOODROW WILSON—I haven't read a serious book thru in fourteen years.

HORATIO PARKER—Heaven forbid that I should advise any one to be a musician.

DAVID RATOFF—The Federal League is one of the 20,000 leagues under the sea.

EDWARD BERNSTEIN—Germany should declare her readiness for an armistice.

PROF. M. V. O'SHEA—Merely telling children to stop talking won't solve the problem.

ED. HOWE—It is a pity that Billy Sunday does not talk of the stomach instead of the soul.

JOHN BROOKS LEAVITT—The practice of the law by itself, tends to sharpen, not to broaden the mind.

E. H. SOTHERN—I own five Elizabethan four-post beds and I want to get into them and rest a while.

SAMUEL GOMPERS—The eternal problem with which the labor movement has to cope is control of property.

MISS ALICE CARPENTER—I have found that there is a psychological difference between men and women.

PRESIDENT A. LAWRENCE LOWELL—There is something in life worth doing besides what is forbidden.

VICE-PRESIDENT MARSHALL—I never did see what God made an aristocrat for. But then he made cinch bugs, too.

CHARLIE CHAPLIN—No matter what else I may do that is amusing, I don't believe I can get away from the walk.

GEORGE BERNARD SHAW—Doctors are just like other Englishmen—most of them have no honor and no conscience.

DR. JULES BOIS—The heart and mind of the French woman form pure treasures of modesty, scrupulousness and disciplined discretion.

LORD ROSEBURY—If we were vanquished the United States would be the next to suffer from the aggressive and unscrupulous power of Prussia.

GERTRUDE ATHERTON—A year or two hence women for the first time in history will have it in their power to seize the reigns of the world.

THEODORE ROOSEVELT—It was said of me that I spoke softly and wielded a big stick. It can be said of Mr. Wilson that he speaks bombastically and wields a dish rag.

PROF. GILBERT MURRAY—If the value of a man's life on earth is to be measured in dollars and miles and horse power, ancient Greece must count as a poverty stricken and minute territory.

MRS. JULIAN HEATH—Three hundred thousand babies died last year before they reached the age of twelve months—300,000 souls which would have meant much to society and to national defense.

CHARLES E. HUGHES—In the long run the American people do not make a mistake with respect to what is necessary to their prosperity and the future of their country.

W. F. FITZGERALD—The financial world possesses a large number of men of big means who are willing to loan the use of their names for \$10 or \$12 a month and whose only interest in the corporation is the gasoline money which they collect.

REV. DR. WILLIAM MANNING—From the standpoint of a minister of religion whose duty it is to advocate only that which is for the highest moral and spiritual good for the people, I believe there is nothing that would be of such great practical benefit to us as universal military training.

Year 'round—and everywhere—this *luxurious* enclosed Packard is yours for the most exacting and satisfying service

This winter—for sheltered comfort, health insurance, travel independence. Next spring and summer—for all these, coupled with the joys of far-range *country touring*.

Protection from cold and snow, from dust, and wind and rain.

Plus the deep satisfaction which comes from knowing that, go where you please, you carry with you the atmosphere of refined and substantial elegance.

The surplus power of the silent twelve-cylinder engine

gives to the enclosed Packard the velvety action—the wide range—the road mastery—of the Twin-six touring car.

And the unmatched riding comfort of the Packard body has been enhanced by new and marked improvements.

Until you have experienced at first hand this rich harmony of power and beauty, you cannot appreciate all that it means in sumptuous ease—for you.

Twenty-one styles of open and enclosed Twin-sixes for your choice. Cars are now on display at all branches.

## THE ELECTION AND A LOOK AHEAD

**P**RESIDENT WILSON will enter upon his second term a majority President, which he was not at his first election. He received over a million more votes this year than four years ago. He has a majority in the Electoral College of ten votes, and a popular plurality of something over 400,000 votes. This is the smallest electoral majority since the famous contested election of President Hayes in 1876; and the smallest popular plurality since the second election of Grover Cleveland in 1892. McKinley at his two elections received popular pluralities of 600,000 and 850,000 respectively, Roosevelt a plurality of two and a half million, and Taft a plurality of a million and a quarter. Four years ago Mr. Wilson led his nearest opponent by a little over two million votes, but Mr. Roosevelt and Mr. Taft together received considerably more than a million votes more than Mr. Wilson. The Democrats this year carried thirty states and the Republicans eighteen; but the aggregate population of the Republican states was slightly greater than that of the Democratic states.

It was a narrow margin for the President. A difference of less than four thousand votes in California, the state whose thirteen electoral votes turned the scale finally against Mr. Hughes, would have changed the result. But the victory, narrow as it was, is an undeniable triumph for Mr. Wilson personally. It was his administration that was on trial. In so far, moreover, as the voters were judging the legislative record of the Democratic party during the past three years, it was a record which his hand had done more than any other force whatever to write.

It was a sectional victory—perhaps one might be pardoned for saying a two-sectional victory. It was the solid South and an almost solid West—Oregon and South Dakota the exceptions—against an almost solid East and Middle West—New Hampshire and Ohio falling similarly on the other side.

The significance of the result would seem to consist of four elements, some of which overlap and intertwine. They are these:

(1) The approval by the West of the President's success in "keeping us out of war";

(2) The support of the women in the suffrage states, only two of which, Oregon and Illinois, went into the Republican column;

(3) The conviction on the part of the western progressives, who are more radical and warm-hearted than their eastern brothers, that Mr. Wilson was more their

kind of a Progressive than Mr. Hughes, and their belief that the Democratic party under the leadership of Mr. Wilson is the present party of progress, while the Republican party under its present leadership is the party of the backward look;

(4) The willingness of the Republican candidate to content himself with an attack upon Mr. Wilson and his deeds, and the failure of the Republican campaign to develop any kind of positive appeal to the voter.

The election has one clear lesson for the American politician. The American people in this generation are on the side of progress. No party can win to power that ignores that fact. The Democratic party was successful this year because it had faithfully followed a progressive leader. The Republican party failed, in spite of the fact that its candidate was an acknowledged enemy of reaction and his principal ally the founder of the late Progressive party, because his leadership, as displayed at the Chicago convention and later, carried no conviction of enlightenment, displayed no determination to forge ahead.

There is a kind of relief that comes with the reëlection of a President. There is none of the nervous uncertainty involved in "swapping horses" midstream. We know what to expect. If we cannot foresee the specific acts and accomplishments that lie behind the mists of the future, we do know the spirit in which they will be conceived and the broad principles that will be applied to their consideration.

We know the man, not only as man, but as President. We have seen him at work in the White House; we have observed him face to face with Congress. We do not need to guess what kind of a President he will make. We know.

President Wilson will continue to be a Democrat in the party sense of the word. He will not give up easily the commanding position he has achieved as leader of his party. He will naturally go on doing the things that have given him that leadership and that will make it possible for him to keep it. In so doing, he will doubtless condone sometimes, for the sake of party harmony and effectiveness, things that are rather "practical" than ethical. But if the net result of his leadership, especially in legislation, is as admirable as it has been during his first term, the country may well overlook some small amount of "practical" politics."

Mr. Wilson has used his commanding influence as party leader on behalf of the general welfare. He has been no servant of special interests; he has con-

ceived himself to be the people's advocate, and he has played the part in full loyalty to his own high conception of its requirements. There is every reason to be convinced that he will depart in no degree from the course he has thus charted for himself.

The President will continue to be a democrat in the broad meaning of the word. He has a hearty belief in the common man and a deep conviction that the business of government in a democracy is to preserve his rights and his well-being from the encroachments of the few. "A nation is as great, and only as great, as her rank and file," is one of his striking statements of this belief. Another runs thus, "The great problem of government is to know what the average man is experiencing and is thinking about."

But Mr. Wilson puts perhaps too great an emphasis upon the importance of knowing what the average man is thinking about. He is in great danger of neglecting one of the most vital functions of leadership, that of pointing out new paths for his followers to tread. He is wont to wait for the people to tell him what they want, instead of setting before them vigorously and persuasively what he believes they ought to want and trying to convince them of its wisdom and desirability. He is an admirable translator of the popular will into action; he is no champion of lost causes or causes not yet won. He is a constructive genius; he is not a crusader. He builds railroads, but he blazes no trails.

In the realm of foreign affairs he will continue to bend every effort to keep us out of war. In so doing he will be following the preponderant desire of the American people. But he will find himself compelled to commit inconsistencies and to cut his coat according to the cloth provided by others. For it is nearly as true that it takes two to prevent a quarrel as it is that one cannot make a quarrel alone.

In the matter of Mexico he will, like a juggler with three balls in the air, strive to show three purposes at once—to befriend the Mexican people, to protect American lives and rights, and to avoid war. He will find it no easier task in the future than he has in the past.

### THE ESSENCE

**D**OESN'T it all come down to this: Mr. Hughes violated the first principles of salesmanship by running down his competitor's goods?

### EAST IS EAST AND WEST IS WEST

**T**HIS election makes it more evident than ever that the Mississippi River separates two sections having widely divergent political ideals and modes of thought. Of the northern states it seems only two of those east of the Great Divide went for Wilson and only four west of it went for Hughes. We may disregard the South, because in national elections the South has no politics, radical or conservative. It will support any Democrat from Bryan to Parker. There are, as we all know, wide differences of opinion among Southerners on national issues such as protection, colonization, foreign relations and so forth, but they cannot make themselves felt so long as the South votes solidly for any policy labeled Democratic.

The West, however, will decide future elections as it

has this, because it is the mobile-minded section of the country. It holds the balance of power like a mass of independent voters in any state election. Consider for instance the vote on the state and national tickets in Kansas and California. Both went for Wilson, but Governor Capper won in Kansas and Governor Johnson received an overwhelming vote for Senator in California. The East may usually be counted on to support any conservative Republican, and only a conservative Democrat like Cleveland can carry it. The West has inclined to radicalism ever since the great agrarian movement of a quarter of a century ago when it realized that an agricultural and a debtor section might have different interests from a manufacturing and a creditor section. From 1892 to the rise of Roosevelt the West was on the whole Populist or Bryan Democrat. It was almost unanimously Republican under Roosevelt and supported Taft on his recommendation. In 1912 the Progressive party displaced the Republican in the West. In 1916 the West went mostly for Wilson. This apparent vacillation is not due to caprice, but to the fact that in America the two parties do not, as in England, represent consistently liberal or conservative tendencies, for it depends upon which faction in either party happens to gain control at a particular time.

It is clear, however, that between the East and the West there is such a distinction, and that the West is more inclined to favor new and radical legislation. We may account for this in several ways. One is the relative newness of the western country and its freedom from tradition. When people set about making institutions for themselves they are likely to make them of a new type. Then, too, emigrants from various parts of the East came together in the West, and in the conflict of minds new ideas were struck out. A more important factor, perhaps, is that the country has for a century been subjected to a process of segregation by psychological selection thru emigration. The more enterprising, the more unruly and the more restless members of Eastern communities have generation after generation been drawn to the West. At the same time the East has been filling up with emigrants from Europe, who tho they may have had more initiative than those of their families who were left behind, have exercised a reactionary influence on the American communities into which they have come. We see the same difference between England and her colonies: New Zealand, Australia and Canada are much more inclined to novel legislation than the mother country, and some of their measures such as equal suffrage, prohibition, land laws and control of public utilities, are the same as are being adopted in our own West.

At present it is impossible to decide which of these differentiating agents is the most important, but the future will show. If the radicalism of the West is due merely to frontier conditions, we shall see that section become more like the East year by year. If on the other hand it is due to a temperamental selection by emigration, it will form a permanent and increasingly manifest distinction from the East.

A difference of temperament inevitably arouses a mutual antipathy and distrust. The Westerners had nothing personally against Mr. Hughes except that he was favored in the East. This, however, would be sufficient to swing a state or two against him. This deep-seated prejudice against the East is not sufficiently realized by those

who have not lived in the West. The sight of the word "New York" is apt to arouse in the mind of the Westerner the same feeling as "Boston" excited in the Southerner of the old school. When Bryan on his first campaign was on the eve of starting East to make a speech in New York, he inadvertently spoke of "carrying the war into the enemy's country." This phrase surprised and irritated the New York Democrats who were preparing to welcome him with as good grace as they could, but to a Nebraskan it seemed a natural expression, and even those in his own state who most detested Bryan could not see what was wrong with it. On the other hand the habitual contempt with which the untraveled Easterner regards the West and especially the political ideas originating there, is not calculated to allay the feeling of antagonism.

It was amusing to see New York papers which had supported Wilson come out on Wednesday conceding the election of Hughes. New York State had gone for Hughes and that, in their minds, settled the question. They had not realized that the state that decided the election lay upon the Pacific, not the Atlantic coast. In the future, however, the West cannot be ignored, for with its increasing population its power will become greater. It is most important, therefore, to cultivate a good understanding between the two sections of our country and remove their mutual mistrust. They are becoming more alike in civilization and their interests are becoming more identical, and if their temperaments tend to diverge then they have all the more need of each other.

### A MYSTERY

AS a matter of fact the unexpected Wilson majorities came mainly from the states where Mr. Bryan did his campaigning.

### THE WOMEN

IN twelve states women voted for President.

It is asserted by anti-suffrage organs as an argument against suffrage that the women in no state voted as a unit. It is true. They voted—just as the men did—not as members of a sex, but as individuals in a community.

Whether this proves to you that woman suffrage is good or bad, depends on whether you believe in woman suffrage or not.

Or whether you believe in democracy or not—which is the same thing.

### THE TIDAL WAVE OF PROHIBITION

THE election adds to the nineteen prohibition states four more, Michigan, Montana, Nebraska and South Dakota, with the prospect of two others, Utah and Florida, coming in later. Half of the states, and, if we include Alaska, more than half of the area of continental United States, are now dry territory. Besides this, liquor is now excluded by local option or high license from a large part of most of the other states.

The meaning of this is plain. It is simply that the American people are becoming slowly but soundly convinced that alcohol is too dangerous to be allowed at large in the community. This is no outburst of fanati-

cism. The people have not been carried off their feet by eloquence. They have not been misled by exaggerated statements as to the evils of the liquor traffic or of the advantages of abstinence. They know what the saloon does, they know what prohibition does, and they prefer the latter. They are shutting down on alcohol as they are shutting down on revolvers and sword canes, on cocaine and opium, on dynamite and fast automobiles. Such things are too risky to be unrestricted. There is a certain exhilaration in the driving of an automobile at fifty miles an hour. No doubt, too, most of those who would indulge in such fast driving are sufficiently level-headed and experienced not to harm themselves or others. But we know that some are not. The liability that those who run at fifty miles an hour thru city streets will some day come to smash is so great that we have prohibited it.

For more than fifty years now the American people have had the opportunity of watching the working of prohibitory legislation. They are well aware of its defects and deficiencies, but they know—in the only way by which we know anything, seeing it tried—that on the whole it works well, and so they want it. For instance, Kansas adopted a prohibitory constitutional amendment in 1890. Seventeen years later her southern neighbor, Oklahoma, followed her example. Colorado on the west and Nebraska on the north were slow to make up their minds, but the former in 1914 and the latter this month decided to adopt the same policy. Missouri on the east has still to be shown, but is already more than half convinced.

Our system of state autonomy affords a means of introducing and trying out such reforms. It has given to political science what has made the physical sciences so sure-footed, the experimental method. Each state is a laboratory, and, after enough of them have tried some new plan and find it a success, then it may properly be extended to the whole nation. The time is fast approaching when prohibition will be ripe for such extension by congressional action.

### THE BIG FACT

THE big fact in the election, after all, was the tremendous intellectual superiority of the Wilson candidacy, standing over against the amazing intellectual failure of the Hughes candidacy.

By this statement we mean more than a personal comparison, altho we believe it to be true that Mr. Wilson's majority is a nation-wide recognition of his political ability. This is an interesting and important fact, but an immensely more significant fact has been the intellectual grasping of a situation by one set of men, and the nearly complete failure of another set of men to grasp it, or even to see it.

For more than twenty years the American people has been developing into a democracy better as well as bigger than any democracy on earth hitherto. Not only has political power been distributed thruout a nation of a hundred millions of individuals approximately on a basis of universal manhood suffrage, but also the millions of electors have been thinking and talking about the problems of social justice and of the political ways and means to attain it with an intensity of mental application which, we venture to say, has never been equaled in any other land or in any other century. American

voters by and large are politically self-conscious. They know what they want and they think intently and talk continually of the way or ways to get it. They believe themselves to be politically competent, and they do not propose to surrender their self-governing prerogative to any self-constituted group of superior persons.

To this situation the Democratic party under the leadership of Mr. Wilson has reacted on the whole intelligently, and the Republican party, rent by factional jealousies, has reacted on the whole stupidly. In every American community there are men intellectually alive and not afraid to talk about all manner of questions in a searching and forward-looking spirit. Some of these men are socialists, some of them are progressives, but all of them, in a large and important way, are democrats. They are alien in mind and feeling to all groups and classes that for whatever reason are disposed to obstruct the democratic development of modern society.

In the Republican party are men of exceptional intellectual power, Mr. Elihu Root, for example, but they have signally failed to command a following among the live intellectuals of lesser caliber distributed thruout the nation. Their following has been among lawyers (for the most part conservatives by instinct and training), profit-making manufacturers, and, above all, among those groups which, in every American village, gather day by day about the stock bulletin and whose intellectual operations rarely extend beyond "quotations."

These are blunt truths bluntly stated, but as surely as the sun rises and sets the Republican party has no future in this country until it wakes up to a recognition of them. If its leaders suppose that they can get back into power by handing out again the campaign "bunk" that has pulled them thru in years past, and that they relied on once more this fall, they have further awakenings coming. The big fact in American political life to-day is the tremendous interest of the American masses in problems that call for something more than a stock broker's comprehension of the earth and its inhabitants.

=====

T. R.

**I**F Hughes had won he would have been the candidate to succeed himself in 1920. No chance for any other Republican till 1924.

In 1924 the Preëminent Personality will be sixty-six years of age. Four years hence, however, he will be a strenuous youth of sixty-two.

A word to the wise is unnecessary.

#### WAITE, MASTER OF EFFICIENCY

**C**ITY government is notoriously inefficient government; for ward politics and efficiency will not mix. Others countries—notably Germany and England—long since found out how to make the administration of their cities efficient by sending politics packing. In this country we have begun to learn the lesson by experiments here and there.

In Dayton, Ohio, they have efficient government. For this there are two reasons: they have the right system and they have the right man. The system is the city manager plan; the man is H. M. Waite. For nearly three years he has sat at the focus of Dayton's municipal affairs and the products of his managing are good gov-

ernment, improved living conditions, economy, efficiency. Waite has made the city live within its income. He has established a system of financial control that enables the city—people as well as administrators—to know at any moment precisely where it stands in relation to its pocketbook. He has brought the city's administration out into the light. The filing basket, which contains the city manager's official correspondence, is always open to the City Hall reporters, the only restriction being that they shall not make any individual matter public until, in the newspaper phrase, the manager is ready to have the news "break."

Waite has kept party politics out of the city government. One sentence of his has been repeated so often in public and in private that it has come to be used by his friends as an affectionately humorous tag, "I do not know the politics of a single one of my subordinates and appointees." It happens to be true. He appoints for efficiency; as a result he gets it.

Waite works hard. So does the rest of the administration under him; and its personnel seem to like it. His example and his enthusiasm are contagious. Think of walking into the office of the executive of a city government at eight-thirty in the morning and finding that it had been running under full head of steam since eight! There you have another essential ingredient of efficiency.

Waite is humane—and human. He not only has a head that thinks straight, but a heart that cares. The city government is not run primarily for the rich, the prosperous, the business interests; it is run for all, with perhaps a little extra emphasis on the less fortunate. Incidentally, the rich, the prosperous and the business interests like it. Waite is much keener to have the poorer quarters of the town cleaned up and made attractive than to make the naturally beautiful parts of the city more beautiful. He is always ready to listen to complaints or suggestions or grievances from the very least prominent of Dayton's inhabitants. There is no question that Dayton is a better place for the workingman and his family to live in since Waite began to "manage."

For one thing, fewer babies die. The welfare department of the new city government has done wonders in helping poor mothers to bring up their babies in safety and health. In the whole United States, out of every thousand babies under one year old 124 die each year. In Dayton the rate has been brought down, under Waite's management, from 139 to 88.8. This, too, is efficiency of the highest kind.

The Dayton government is a splendid object lesson for the cities of the United States. Its executive head is just the type of man the important work of municipal administration needs. Waite has proved himself, by what he has done in Dayton and the way he has done it, a master of efficiency.

#### IT MAY HELP

**W**E do not anticipate any immediate and far-reaching revolution in the legislative output of Congress from the participation in its deliberations of the Lady from Montana.

But it may lift the standard of congressional manners, especially in committee rooms and lobbies.

It is not good for men—even congressmen—to be alone.

THE LADY FROM MONTANA

IS IT BY THIS BILL THAT MISS JEANETTE RANKIN WILL BE REFERRED TO BY HER FELLOW MEMBERS WHEN SHE TAKES HER SEAT THE FIRST CONGRESS AFTER THE END OF THE WAR? MISS RANKIN WAS PRESIDENT OF THE MONTANA SUFFRAGE ASSOCIATION WHEN MONTANA ADOPTED WOMAN SUFFRAGE IN 1914. IN CONGRESS SHE PROMISES TO WORK FOR NATIONAL WOMAN SUFFRAGE, CHILD WELFARE, NATIONAL AND STATE PROTECTOR, LABOR LEGISLATION FOR PROTECTION OF WORKERS, AND GREATER PURSUIT OF THE ACTIVITIES OF CONGRESSIONAL COMMITTEES. SHE IS A REPUBLICAN.

# THE STORY OF THE WEEK

## The Presidential Election

On Tuesday, November 7, President Woodrow Wilson and Vice-President Thomas R. Marshall were reelected for another four years by the narrowest margin of electoral votes that have determined an election since the Hayes-Tilden campaign of 1876. Indeed, it is still not beyond the bounds of possibility that the official count, which is not yet complete, may shift enough votes in the close states to elect the Republican candidates. Altho President Wilson has a popular plurality over Mr. Hughes of more than four hundred thousand votes, the transfer of less than two thousand votes in California from the Democratic to the Republican candidate would have assured the election of Mr. Hughes, unless later returns place Minnesota in the Democratic column. The popular vote in 1916 was far larger than in any previous presidential election, partly because of the adoption of woman suffrage by Oregon, Arizona, Kansas, Montana, Nevada and Illinois during

the last four years, partly because of the widespread popular interest in this year's campaign. There are still a few rural precincts in a number of states which have not yet reported the presidential vote, but it is evident that President Wilson has received the suffrages of more than eight and one-half million of his fellow citizens and Mr. Hughes of over eight million one hundred thousand. No authoritative estimate of the Prohibition or of the Socialist vote has been made, but the Prohibitionists claim an increase over their usual quarter million, and the Socialists are confident that their complete vote will not fall short of one million and two hundred thousand.

The early returns of Tuesday night were largely from the states east of the Mississippi and showed unexpected Republican strength, especially in Illinois and New York. Since both parties had regarded these states as pivotal, the election of Mr. Hughes was taken for granted, Democratic papers conceded defeat and many Wilson backers paid their election bets. Later

## ROMAIN ROLLAND: NOBEL PRIZEMAN

The annual prize of \$10,000 under the will of Alfred Nobel for the best work of literature of an idealistic character has been definitely awarded to the author of "Jean Christophe" and "Above the Battle." It is interesting to see the profits on high explosives go to one who has exerted himself to prevent war and to allay its passions.

returns from the West placed the result in doubt, and by Wednesday morning the election was known to depend upon later returns from the states of West Virginia, Minnesota, New Mexico, North Dakota, California and New Hampshire. None of these states could be claimed by either side as certain for the next two days, but eventually West Virginia and Minnesota were placed in the Republican column and the other doubtful states in the Democratic. The result in some states may depend upon the vote of National Guard regiments on the Mexican border. Minnesota has an especially large contingent at the front. Other electoral votes are endangered, not by the closeness of the count, but by accidental causes. A Democratic elector in Washington died before election day; a Republican elector in West Virginia refused to accept office; a Democratic elector in Texas is said to be ineligible because he is a holder of public office. There has also been some talk of throwing out the electoral votes of

#### HOW THE STATES VOTED FOR PRESIDENT

As the article on the opposite page points out, there is still a possibility that some of the Hughes and Wilson states may be changed when the final official count is made

Kansas and Arizona on the ground that the ballot in those states did not allow voting for individual electors, but only for the party ticket as a whole. All of these questions may be fought out in the courts, and recounts may be held in a few close states, but it is improbable that when the verdict of the people is finally determined by the official count that it will be reversed because of technicalities. Allegations of fraud have been few and far between, and never was a close election accepted by the public in a more sportsmanlike spirit.

**Congress and the States** The increasing predominance of the executive branch of the national government is vividly illustrated by the much greater degree of popular interest in the presidential than in the congressional election. Yet the element of uncertainty which added so much to the interest of the presidential contest was equally present in the struggle of the parties for the House of Representatives. Indeed it is still uncertain whether any one party will dominate the lower House. The Republicans claim 217 seats to 210 for the Democrats, with three still in doubt, but five independent members may hold the balance of power. Thomas Schall of Minnesota, Progressive; Charles Randall of California, Prohibitionist; Meyer London of New York, Socialist; Whitnell Martin of Louisiana, Protectionist, and Alvan Fuller of Massachusetts, Independent, will no doubt be much courted by the Republican and the Democratic party managers to induce them to lend their badly needed support to the party caucus and thus insure a safe majority. The Socialists were much disappointed by their failure to increase their delegation of one in Congress. Early returns gave them two seats from Wisconsin and two from New York. But the election of G. R. Lunn on the Democratic ticket will bring into Congress a man who still regards himself as a Socialist, altho he has been re-

pudiated by his fellow Socialists for refusing to bow to the will of the party machine when he was mayor of Schenectady.

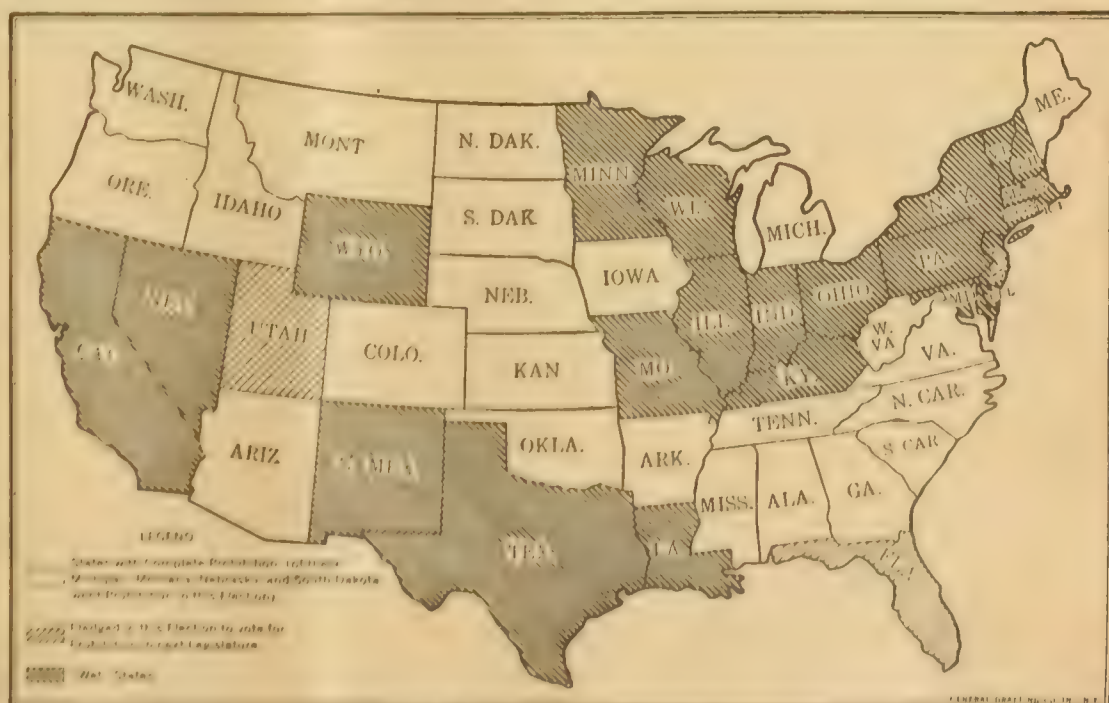

The Senate will remain Democratic with a majority of twelve. There have been a number of interesting contests for seats in the Senate. The biggest surprise of the entire congressional campaign was the election of P. G. Gerry on the Democratic ticket to represent Rhode Island, a strongly Republican State, in the Senate. Almost equally remarkable was the choice of a Republican for the Senate by the Democratic state of Maryland. But the congressional elections seem to have been decided by the voters quite independently of the presidential contest. For example, Hiram Johnson, the Republican and Progressive candidate for the Senate from California, was triumphantly elected by a plurality of some two hundred thousand, but Mr. Hughes, altho helped by the Progressive party organization, was unable to carry the state. This result gave the California Republicans an opportunity

to accuse their Progressive allies of bad faith and secret treachery to the national ticket. Senator-elect Johnson hotly retorted that Mr. Hughes would have carried California and won the election if the activities of the "Old Guard" in the national and local campaign had not created a spirit of distrust among the rank and file of the Progressive voters.

Believers in woman suffrage noted with particular interest the victory of Miss Jeanette Rankin, Representative-elect from Montana on the Republican ticket. Miss Rankin will be the first woman elected to the House of Representatives in the history of the republic. She ran far ahead of the rest of the Republican ticket, state and national, and her victory is a personal tribute. Woman suffrage was voted upon this year by the electorate in West Virginia and in South Dakota. In both instances it appears to have been defeated, altho in South Dakota the result is still in doubt and the first returns indicated a large affirmative majority. Three women have been chosen as presidential electors from California.

Prohibition made important gains at the polls. The new prohibition states are Michigan, Montana, South Dakota and Nebraska. Utah and Florida are expected to enact a prohibitory law at the next session of the legislature and the returns indicate that prohibition has secured a victory in Alaska.

Few of the state elections this year have attracted nation-wide interest. In general, the Republicans were stronger locally than nationally. Governor Capper, for instance, was reelected governor by Kansas altho he was on the Republican ticket and Kansas supported Wilson. Governor Whitman of New York defeated his opponent, Judge Seabury, by a greater plurality than that secured by Mr. Hughes, and Walter Edge, the Republican candidate for governor, carried Woodrow Wilson's home state of New Jersey. The new governor of Utah, Simon Bamberger, is a Jew and therefore, in that Mormon state, a "Gentile."

#### HALF THE UNION DRY

Twenty-three states have voted for prohibition—four in the last election—and two more, Utah and Florida, have elected legislatures pledged to adopt prohibition in their next session.

#### THE WRECKS OF A WEEK

Sixty cars and four locomotives were wrecked in a railroad smash-up near Altoona, Pa., which killed ten people and injured many more

**Mexican Anarchy** Altho President Wilson's policy of "watchful waiting" in Mexico seems to have received the approval of the American public, it is becoming daily more doubtful whether he will find it possible to refrain much longer from intervening decisively in Mexico even without the consent of the de facto government. The American-Mexican Joint Commission, which suspended its sessions over election, met again on November 10. Official Washington is unwilling to build very high hopes upon the deliberations of the Commission because the Mexican delegates demand the evacuation of the country by our army, and, while our Government is not unwilling to oblige the Mexicans in this matter, it may be unable to do so if the present rebellion becomes more menacing. Mr. Wilson, should he decide to renew the chase after Villa, will probably act the sooner because of his victory at the polls, since if Mr. Hughes had been chosen president no avoidable military action would have been taken till after the inauguration of the new president. It is usually considered a matter of political courtesy for a president whose term is about to expire to refrain from committing his successor to the carrying out of a foreign policy which he has initiated. Thus, for example, Mr. Taft refused to recognize Huerta at the end of his term of office.

It is almost impossible to discover the exact extent of Villa's recent operations because of the wild and conflicting tales of refugees and the sweeping denials of all such reports by the de facto government. It appears that the Carranzistas are still holding out in Chihuahua City, but that the entire southern portion of the state is in the hands of the rebels. Parral and Santa Rosalia have been captured and great fears are entertained for the

safety of Americans resident in that part of the country. Villa's followers are said to have sworn death to every American that they can catch, and new murders of Americans are weekly reported. An even more dangerous phase of the situation is the success recently attained by General Felix Diaz in southern Mexico. He has captured Tehuantepec City and holds a part of the Tehuantepec railroad. His forces have also invested the Pacific seaport of Salina Cruz.

If it were not for the war in Europe the Mexicans would probably suffer either the intervention of European powers or of the United States at their instigation. That numerous Chinamen have perished during the present endless chain of civil wars and rebellions matters little diplomatically, for China is in no position to protect Chinese residents in any other country. But the reported capture of a German consular agent at Parral by Villa bandits, the exodus of foreigners from the rebellious districts, and the peril to the important British oil interests at Tampico would require attention in normal times. One international difficulty has, indeed, arisen as an incidental consequence of the Great War. The British Government referred to a rumor that a German submarine was operating in Mexican territorial waters and demanded that the Mexican Government take steps to protect its neutrality. Foreign Minister Aguilar, in reply, asked why the British note was presented thru the medium of the American Government instead of being sent to him directly, pointed out that even the United States had been unable to prevent German submarines from raiding commerce near the Atlantic coast, and intimated that if the British would keep German submarines from crossing the Atlantic there would be no trouble.

**Deportation of Belgians** The Belgian Government has issued a protest against the violation of Article 3 of the Hague Convention by the German Government in transporting men from Belgium for enforced labor. According to the statement of the Belgian Foreign Minister over 15,000 civilians have been taken from their homes and sent to Germany and Verdun and "there can be no doubt that most of them will be employed on work of a military character." A decree issued on October 3 empowered the military authorities to compel all non-invalids dependent for a livelihood upon others to undertake work away from home. The "slave raids," according to the Belgian account, were carried out with great brutality and ruthlessness. All of the able-bodied young men in certain parts of Flanders were rounded up by the soldiers and driven to the barracks to be later loaded on open trucks and sent away to Germany.

Governor General von Bissing defends his action by reference to Article 43 of the Hague Convention requiring the conquerors of a country to maintain public order and public life. He says that England by cutting off the importation of raw material and prohibiting the export of manufactured articles has reduced a million Belgians to a state of pauperism. Since Belgium was dependent upon her exports of manufactures and imports of food the British blockade reduced the country nearly to starvation. At first the Governor General tried to relieve the unemployment by public works such as buildings, roads and sewers but these being unproductive increased the debts of Belgian communities by \$70,000,000 and cannot be continued. On his calling attention to the opportunities for employment in Germany at \$1.90 a day, double what they could make in Belgium, 30,000 volunteered. Of those who

refused to avail themselves of this 5000 have been deported by military order. They are, he states, well cared for and given the same wages as Germans and their families are supported by the German Government until they can send part of their wages home.

In contradiction to this German view the Allies state that the dearth of raw materials is due to their being confiscated by the Germans, that the British and French governments are providing thru the American Relief Commission for the destitute Belgians and that if the men deported are not employed in military works they will release as many Germans from the factory for the army.

#### The Work of the U-Boats

The reports of increased activity of the German submarines in various waters have caused serious apprehension in this country for such depredations are likely at any moment to involve the United States if indeed they have not already surpass the limits of the permissible as laid down by our Government. A British passenger steamship, the "Arabia" of the Peninsular and Oriental line, was torpedoed without warning in the Mediterranean at noon on Monday. She carried 437 passengers, including 169 women and children, all of whom were saved by the ships that came to the rescue. Two engineers are believed to have been killed by the explosion. It is stated that two submarines were seen and that the "Arabia" fired on one of them after having been hit by the torpedo. The "Arabia" was homeward

bound from Australia by way of Suez. It appears that there was at least one American on board, Paul R. Danner, of Cambridge, Mass., who has been engaged in Y. M. C. A. work in India and was going home on a furlough.

The steamer "Lanao," carrying rice from Hongkong to Havre, was sunk off the coast of Portugal by a German submarine on October 28. The "Lanao" is a Philippine vessel registered as from Manila and so carried the American flag. She had, it is said, been purchased by a Norwegian owner, but the transfer to the Norwegian registry was not to be made until her arrival in England. Both the German and British Governments have, in contradiction of the Hague rules, made all foodstuffs absolute contraband of war so the United States has to fall back upon our treaty with Prussia in 1799. In accordance with this the Frye case was settled last year. The American steamer "William P. Frye" was carrying wheat from Oregon to England when she was sunk by the German cruiser "Prinz Eitel Friedrich." Germany then claimed the right to destroy the cargo but admitted that she had no right to sink the ship and therefore promised to pay for it.

The steamship "Columbian," carrying 1500 horses from Boston to St. Nazaire, France, was sunk by a U-boat. The crew numbered 120, mostly Americans and mostly negroes. All were safely landed by lifeboats at Corunna, Spain. The "Columbian" was owned by the American-Hawaiian Steamship Company, but chartered by the France and Canada Steamship Company and

was under American registry. The U-boat encountered the "Columbian" in a storm but waited for two days until the sea was calm enough so the crew could disembark safely.

#### The Battle for the Bridge

When the Rumanians retreated from the Dobrudja it was reported that they had blown up the bridge behind them. But, as we pointed out at the time, it was improbable that in their hasty retirement they could have completely demolished so extensive a structure. Just how much damage was done to the bridge neither party has been willing to state, and, in fact, the despatches from Berlin and Bucharest have been equally silent in regard to operations at this important point, until we heard from Petrograd that Mackensen's forces have been defeated at Dunarea with great slaughter. Sofia reported later that the engagement was a victory for the Bulgars. The discrepancy between the two reports as to which won is unimportant, for it is not unusual, but the point on which they agree is important, that there was fighting at Dunarea. For Dunarea is the first railroad station on the left or western bank of the main stream of the Danube, and this shows that during the ten days when the despatches were silent General von Mackensen has succeeded in throwing a force across the river. How he did this and how large the force was we have no means of knowing. If the spans crossing the stream were destroyed he doubtless made a pontoon bridge, as

THERE'S NO SUCH THING AS "WASTE" PAPER NOW

With the price of print paper increasing at the rate of fifty per cent in one year the second-hand paper dealers are sending most of the paper waste back to the mills to be made over. In New York City a huge force of men and women is employed to sort out the different grades of paper scraps, tons of which used to be dumped into the harbor every day.

he did when he crossed the Danube and captured Belgrade.

Whether he will be able to capture Bucharest and to conquer Rumania as he did Serbia depends largely upon the condition and possession of the Carol bridge. This bridge, as its name implies, was constructed under the late King of Rumania, for the purpose of connecting his capital of Bucharest with the Black Sea at Constanza. It is the longest bridge in Europe, for after it crosses the main stream of the river there are eleven miles of marsh and minor affluents to the west to be covered by viaducts and causeways. The river proper is crossed by one span of 600 feet and four others of 450 feet each raised on masonry piers 120 feet above the water. Probably one or more of these were blown up by the Rumanians, but they may have been reconstructed. The rest of the structure extending over the swampy land west of the Danube is apparently usable, for the Russians and Rumanians have crossed over with cavalry to Dunarea, which stands upon a sort of an island between the Balta bogs and the main stream of the Danube.

While General von Mackensen is trying to cross the bridge from Cherna-voda to Dunarea he is threatened with an attack from the rear by General Sakharoff, who has been sent from Russia to take command of the troops which were defeated on the Constanza railroad and driven into the northern part of the Dobrudja. These he has reorganized and reinforced by Russian troops brought up the mouths of the Danube, and with this army he has advanced south again, driving Mackensen's forces before him until now he is within a dozen miles of the railroad that crosses the Dobrudja from the bridge at Cherna-voda to the sea at Constanza. If Mackensen is unable to hold this line he will be foiled in his attempt to invade Rumania by way of the Carol bridge. Constanza, now in the hands of Mackensen, has been bombarded by Russian warships and the great tanks of oil have been fired.

**On the Stokhod** The drive launched last summer north of the Galician frontier carried the Russians forward some forty miles, but before they could reach Kovel or Lemberg they were checked by the Germans who took over the defense of this line from the Austrians. The Stokhod River, which runs twenty miles east of Kovel, formed the limit of the Russian advance. They succeeded in crossing the river at several points, but not in getting much beyond it. Since July there has been very little shifting of the lines altho the fighting has at times been severe.

The same is true of the other side of the Galician frontier, for the efforts of the Russians to reach Lemberg either from the Bug River on the northeast or the Dniester River on the southeast were frustrated. At one time they were within gunshot of Halicz, an important town on the south side of the Dniester, and the fall of that place

### THE GREAT WAR

*November 6*—French and British attack at Transloy. P. & O. liner "Arabia" sunk in Mediterranean.

*November 7*—French take Pressoire, north of Chaulnes. Russians drive back Bulgars in Dobrudja.

*November 8*—Germans bombard Douaumont and Vaux. American steamer "Columbian" sunk.

*November 9*—German Chancellor favors League of Peace. Russians cross Carpathians into Transylvania.

*November 10*—Serbs take 600 Bulgars on Cerna River. French regain most of Saillisel.

*November 11*—Russian warships bombard Constanza. Peace meeting in Wales broken up by rioters.

*November 12*—Austrians and Rumanians battle for Oituz Pass in Transylvanian Alps. French troops interpose between royalist and Venizelist forces in Greece.

was considered imminent, but they failed to get it and were pushed back to the Zlota Lipa River.

It was expected that the Russians would undertake an offensive at the present juncture in order to distract the Germans and Austrians from Rumania, but instead of that we hear that the latter have assumed the offensive and attacked the Russian line. On the Stokhod the Brandenburg troops charged the Russian front seven times on November 9 with the use of jets of blazing oil, and finally the Russians were obliged to fall back to their

© American Press

### FORT VAUX IS ONCE MORE FRENCH

In the German advance and retreat at Verdun Fort Vaux has been a pivotal point. It cost the Crown Prince 80,000 men to capture it. The French have forced the Germans to evacuate by a terrific bombardment of over a week

second line trenches, for a distance of two miles. The Germans report the capture of over four thousand men and twenty-seven machine guns.

**On the Somme** In spite of the bad weather the Allies made two attacks during the week, one north of the Somme River and the other south of it. The former was directed toward the village of le Transloy. The British who were only 500 yards to the west of the village advanced from that direction while the French attacked from the south. Three charges were made but were met by heavy artillery fire from the Germans. According to the Berlin report the Allies were repulsed with terrible slaughter. The Australians who led the attack suffered the most. Six British and four and a half French divisions are said by the Germans to have joined in this effort.

The French were more successful south of the Somme for they gained ground along a front of two miles among the hills north of Chaulnes. This puts them in possession of the villages of Pressoire and Ablaincourt, including the cemetery and sugar factory adjacent to the latter, which have been fought over for a month past. The French report five hundred prisoners.

Summing up the results of the four months of fighting on the Somme both sides claim the victory. According to the German view the Allies have failed since they have sacrificed 600,000 men without making a breach in the German lines. The territory they have taken is insignificant and they have not been able to attain either of their objective points, Péronne or Bapaume. The Germans are so little alarmed for the safety of their lines in France that they have even removed troops from this front for service in Rumania.

On the other hand the Allies assert that the fighting has been in their favor for they have driven the Germans steadily backward and forced them out of the strongly entrenched positions they have occupied for two years. The British and French have now secured possession of most of the hills north of the Somme and the Germans are now occupying hastily constructed trenches on lower ground. The failure of the Germans to hold any point against persistent attack and their inability to recover ground they have lost indicates a weakening in morale. This is further proved by the large number of Germans who have surrendered. From the first of July to the first of November the Allies have taken prisoner 1449 officers and 40,796 men. More than half of these have fallen to the French. The booty captured from the Germans includes 178 field guns, 130 heavy guns, 213 trench mortars and 981 machine guns. Since the Allies outnumber the Germans at least three to one and are better supplied with munitions the Germans are losing relatively every day that the fighting continues.

From these two statements the reader can decide for himself which, if either, is the victor.

# ENGLAND'S BEST FRIEND—GERMANY

BY P. A. VAILE

BARRISTER OF THE NEW ZEALAND SUPREME COURT, AUTHOR OF "WAKE UP, ENGLAND"

THE Germans are England's best friends. They did not know it; we did not know it; but the moment their foolishness brought us into the war they became England's benefactors. They have done more in two years of warfare to advance social legislation, to promote and encourage the use of English brains than would have been done in a hundred years of normal peace development.

This is not a mere figure of speech. Let us ask how much had the advocates of female suffrage achieved in fifty years of agitation and five or ten of violence. Does anyone need to ask how two years of war have altered woman's position in England?

The women have arisen, never to sink back again. They have felt what it means to be their own women. That is something that in England an Englishwoman never knew before the war, and would not *really* have known in a hundred years of peace; but she knows it now, and the men of England know it, and there will be no going back.

Who, of England, before the war dared talk of nationalizing the railways? It was impossible. It "never could be done." It is practically done. It was done at a stroke of the pen. So in time the railways will come to belong to the people, as they should, and man will be carried as much as possible like a letter, at the universal price, for there should be no tax—or the smallest possible—on movement, which is of the essence of life.

And, who, pray, before the Germans interfered with us would have dared to come between the Englishman and his beer? In normal times it would have been politically fatal. Yet, under stress of war, his drinking time was curtailed, much to his benefit, and to that of his women and children; and when he recovered from the shock, he said it was good; and so it is, for many of the English lower class workers were simply "soakers," and did not require any encouragement; but in peace to have gone near the Englishman's beer would have meant a revolution.

What English Government in peace would have dared to annex the beer-saloons of a city and operate them, as indeed they should all liquor-selling places? Yet, in this ghastly war it has been done, it is being done, it will be done more and more; and our enemies have brought this upon us!

Would anyone have dreamed that

the organization of the privately owned munition factories, the establishment of government munition factories and villages that has taken place, state socialism of the widest and best kind, could come in a little over a year in England, the slowest moving country, of first-class powers, in the world? I trow not. Yet here it is, the work of fifty years in one, for England does not rapidly go back much. She takes a terrible, a truly terrible, amount of arousing but she makes each notch in the upward scale a *resting place*—she does not slide back in a hurry.

In "the piping times of peace" Willett, of daylight saving fame, was a crank, and he died a crank! It needed Germany to show us that he was a far-seeing business man; so now we are thinking of erecting a monument to commemorate his brains and our lack of them!

BEFORE the war the man that preached "Preferential tariff" within the British Empire was looked upon, except by a few intelligent people, as almost crazy. Now every one is crying out that it must be done. Free-trade England for preferential tariff, and in two years! If Joseph Chamberlain could stand among us once again, how would he smile?

And now come flashing across the wires three significant items of news; that the British Premier is considering a measure to be brought forward soon in order to do away, after the war, with all cases of preventable poverty; that the British authorities are taking steps to regulate the delivery of milk in much the same way as letters are now delivered, in order to avoid the waste of labor; and that "Arthur Henderson, President of the Board of Education, has resigned his portfolio as Minister of Education on account of adverse criticism to which he has been subjected" for "alleged failure to meet the present demand for a reform in the nation's educational system," which, one may say, in passing, does not exist, for there is no English "system" of education, as I pointed out in 1907; but is there anyone who can truly say that these things are anything but amazing developments of thought and activity in a nation famous for its inertia?

Almost every day there comes from England in the throes of war some item of news that in peace times would seem to the English like a revolution, that, now, passes almost unnoticed, as, indeed, quite a

matter of course. There can be no more striking commentary on the altered British mind than this readiness to receive and act on new ideas. Quite recently the following cablegram came from London to the *New York Times*:

Replying to a deputation today on the subject of the high price of food and the low wages paid shopkeeping employees in the distributing trades, Walter Runciman, President of the Board of Trade, made the interesting announcement that the government was considering the whole question of a minimum wage for all workers. He added that legislation might become necessary to deal with the sale of milk, and that the subject of municipal shops being established for the supply of bacon and other foodstuffs was also being considered.

Regarding the request that the government take over the wheat supply, Mr. Runciman pointed out the difficulties created by the fact that a large proportion of the grain came from abroad.

Municipal bacon shops! A minimum wage! Civic markets! Governmental control of the wheat supply! Advance, shades of Henry Ford, tell us is this the England that we knew, wallowing in the rut of convention, glued to the car rails of tradition, but two short years ago; that now proposes to give its workers the boon of civic markets where the wonderful, health-giving toll of the sea may be distributed to the people, without thievery and corruption, even as it should be here.

THERE is another significant sign of the way in which this war has quickened the British mind. The Premier of the Australian Commonwealth, Mr. Hughes, has recently spent about four months in England and has been received everywhere with acclamation. From this it is argued that the chances for an imperial council in England are much improved; and probably this is so; yet six or seven years ago I can remember Mr. Asquith practically snubbing Sir Joseph Ward, ex-Premier of New Zealand, for trying to force a definite answer on the question of having an Imperial Council in London.

The fact is that what England is now suffering was almost a necessity for her, if she was to remain, or rather come again to what she was reputed to be. To speak plainly, she had grown fat and lazy. The people were full of sloth, and conceit, and they were blind to their duty to their God, their country and them-

selves. Without doubt they were deteriorating. In the heyday of their prosperity and to their faces, in "Wake up, England" I told them so. They did not want to serve. They wished to be served—and without taking any trouble to return anything. England before the war was one of the greatest countries of the world for the "Something for nothing" cry. It is otherwise now. They are getting back into their steel some of the old temper. They are becoming again a great nation. They were on the slide. They have been "pulled up" in time—by the Germans.

Perhaps the greatest and most far-reaching change that has been caused by the war is England's conversion to a realization of the necessity for national service. Before the war it was one of the cardinal points of an Englishman's creed that he need not serve his country unless he liked, and he generally did not like. The dread reality has come upon him and he has had perforce to abandon that deep-rooted tradition for a proper conception of a citizen's duty.

And following in the wake of the better idea of service in his capacity as a citizen has come a wonderful change in his conception of the greatest ideal of service, and there has come over the country a better, truer, sounder idea of real values.

THE clamant necessity of a terrible war has "quickened" England in every way. From a land of dead thought, a stagnant backwater of the great stream of international life, she has been suddenly thrust out into the ocean of internationalism. In every corner of the earth she is rubbing shoulders or crossing bayonets with the men of the earth. She is learning to know her friends and relations and above all she is absorbing the terribly practical lesson that she is getting of the tremendous importance of international and imperial coöperation.

Thus it comes to pass that we see England's responsible advisers, Mr. Asquith and Earl Grey making it quite clear that when the tumult in Europe is over they are prepared to

abandon their insularity and to join hands with America and other nations in promoting a league of nations, that will be able to enforce some kind of cosmocratic control, in order to prevent a repetition of the horrors of the past two years.

This is indeed an immense step in advance, for such a league to enforce the peace of the world would of necessity include the British Empire and the formation of the league would practically assist in forwarding the federation of the British Empire into a legal constitutional entity.

To wake up England was a stupendous task that for its accomplishment required no less than the stupendous German war machine.

England really is not yet fully awake to a sense of her international and imperial duty. Lloyd George himself has stated that there are literally millions of Englishmen dodging the service of their country; but for what has been accomplished since 1914 we have to thank "England's best friends—the Germans."

*New York City*

## WILL THE METHODISTS REUNITE?

BY REV. LOVICK PIERCE WINTER

METHODISM with its dozen or more branches is the strongest Protestant denomination in the United States. The total enrollment of its divisions, lay and clerical, reaches approximately seven millions. No other church covers the land more fully and none has a larger constituency.

There has been agreement among the several branches of Methodism in this country as to doctrines and moral standards. The twenty-five articles of faith, abridged from the thirty-nine articles of the Church of England and the "General Rules" drawn up by John Wesley for the guidance and government of his "Societies" are the creed and the moral code of all American Methodists. It is only as to church government and polity that Methodists have differed and out of these differences have come numerous subdivisions. Now the early coming together of the Methodist Episcopal Church and the Southern Methodist Episcopal Church, and probably the Protestant Methodists, also the three colored branches of the Methodist Church, seems practically assured.

The Methodist Episcopal Church began its ecclesiastical history in this country in 1784, with a membership of some fifteen thousand. The

divisive tendency showed itself quite early. The Negro members were the first to secede. In 1828 a large number of preachers and laymen left the church because they were not satisfied with the rights accorded to the laity. But the great bi-section of Methodism came in 1844.

Slavery was the fact out of which this great disruption came. From its very beginning Methodism had only barely tolerated slavery. John Wesley had called the slave trade "the sum of all villainies." But slavery was fully entrenched in the South, and here Methodism had greatly prospered. Bishop James O. Andrew, a native of Georgia, had become connected by marriage and inheritance with slavery. He had taken every legal step to free himself from this connection, but was still by legal implication a slave-owner. The abolition sentiment was strong in the Northern Conferences and growing stronger every day. Bishop Andrew's connection with slavery rendered him altogether unacceptable as a presiding officer over any conference in the non-slaveholding states. In this emergency Bishop Andrew was virtually suspended from the office of bishop. The delegates from the Southern States held that this action was unconstitutional.

It is well to keep this point of divergence in mind, as the powers of the General Conference are still matters of difference and the most serious obstacle to the union of the two great Episcopal Methodisms. To meet a situation which all regretted, a "Plan of Separation" was agreed upon and the Methodist Episcopal Church, South, came into separate existence.

The first definite steps toward reunion were taken five years ago. A commission composed of members of both of the Episcopal Methodisms met and drew up a plan, which provides for unification by reorganization. One General Conference for the whole Church is provided for and several regional or quadrennial conferences. The bishops are empowered to call an extraordinary session of the General Conference of the Methodist Episcopal Church in 1918 simultaneously with the meeting of the Southern Methodist General Conference.

Many details are to be worked out and compromises will be necessary and concessions as well. But the current of sentiment and conviction flows so strongly in favor of ultimate union that it will sweep away all opposition sooner or later.

# THE MOST AMERICAN OF POETS

BY JOYCE KILMER

AUTHOR OF "SUMMER OF LOVE," "TREES AND OTHER POEMS"

THERE are poets and poets — those who look like poets and those who write like poets. Arthur Guiterman is in the second class. He writes poetry because poetry is the medium best suited to the expression of his ideas, but he does not think that in order to write poetry it is necessary to have queer hair or queer clothes or a queer soul.

The conspicuous quality in Arthur Guiterman's verse is Americanism. Now, there is nothing peculiarly American about the fact that his light verse is most exquisitely finished and irresistibly witty—these are characteristics also of the work of Sir Owen Seaman. But Arthur Guiterman's light verse as well as his serious writings is distinctly American in theme, in spirit, and in style.

In Arthur Guiterman's *The Laughing Muse* (Harpers) this poet's partiality for American themes is evident. "The Quest of the Ribband" is given the place of honor, and that droll epic of the department store is rather more American than Plymouth Rock. "Strictly Germ-Proof" (of course you remember those deathless lines about "The Antiseptic Baby and the Prophylactic Pup") satirizes that mania for asepsis which, like the witchcraft mania in the days of our forefathers, has flourished more vigorously in this country than anywhere else in the world. "Our Suburb" is of course near an American city. It is of life in American cities and life on American farms that Mr. Guiterman sings—why not, since it is the life he knows and likes best? Nor does he find it necessary to go to obviously picturesque parts of the country (the Spoon River graveyard, for example), for his subjects. Wherever there are men and women there are themes in which Arthur Guiterman is interested, and in which he can interest his readers.

But the Americanism of Arthur Guiterman's verse is more than a matter of theme. The rich humor which permeates his verse is American—American of Mark Twain and Artemus Ward and Josh Billings. Much modern English light verse depends for its effect upon a witty conclusion, upon a sort of epigram-

ARTHUR GUITERMAN

matic, unexpected, O. Henry twist to the last stanza. Arthur Guiterman's light verse has its witty climax, but it has also humor from the very first line to the last.

Take his rimed reviews which appear week by week in *Life*. Of course, the idea of the rimed review is Eng-

lish. There is Thackeray's delightful résumé of "The Sorrows of Werther," and there is *Punch's* review of "Hiawatha." But it is American to systematize and perfect the rimed review as Arthur Guiterman has done.

These rimed reviews are not mere clever fooling. They are sound criticism put into gay and polished verse. To mention only one instance, there was the rimed review of Mr. Robert Hichens' "Belladonna." Many critics endeavored to persuade the world that this highly colored novel was simply erotic trash. But no one of them succeeded in his attempt, certainly no one succeeded in voicing the irritation of a large part of the reading public as did Mr.

Guiterman in his ten stanza critique. He gave a faithful, if somewhat cynical, résumé of Belladonna's amorous adventures, thru her last meeting with Dr. Isaacson, after which she fled into the desert after her lover. And then Mr. Guiterman wrote this immortal stanza:

He cast her off. In blinded haste,  
Before the birds began to twitter,  
She staggered far across the waste—  
I hope to God a lion bit her!

Arthur Guiterman has been called the Owen Seaman of America. He might better be called the Richard Barham of America, for his poems have the tremendous energy and the galloping music of "The Ingoldsby Legends." But he might better still be called the Arthur Guiterman of America.

He is a slender smooth-shaven man, under middle age, and looking younger than he is. He lives in New York with his wife—if you want to know all about her read "This Is She." He used to write short stories—but he hasn't done so now for nearly ten years. He finds it more pleasant and profitable to write poetry.

Kindness, and shrewdness, and common sense lit by idealism—these are qualities we like to consider American. And Arthur Guiterman has them—you find them in his poetry and in his conversation. He was born in Vienna, but his parents were Americans, and he himself is Yankee thru and thru. There is something American about the matter-of-fact way in which he talks about himself and his craft. There is

## DON'TS FOR YOUNG POETS BY ARTHUR GUITERMAN

*Don't think of yourself as a poet, and don't dress the part.*

*Don't call your quarters a garret or a studio.*

*Don't think of any class of work that you feel moved to do as either beneath you or above you.*

*Don't complain of lack of appreciation. (In the long run no really good published work can escape appreciation.)*

*Don't speak of poetic license or believe that there is any such thing.*

*Don't use "e'er" for "ever," "o'er" for "over," "whenas" or "what-time" for "when," or any of the "poetical" commonplaces of the past.*

*Don't say "did go" for "went," even if you need an extra syllable.*

*Don't have your book published at your own expense by any house that makes a practise of publishing at the author's expense.*

*Don't write poems about unborn babies.*

*Don't—don't write hymns to the great god Pan. He is dead, let him rest in peace!*

*Don't write what everybody else is writing.*

*From the New York Times Magazine*

something American about the way in which—at the meetings of the Poetry Society, for example—he punctures with a few gentle words the purple balloons of Imagistes, Vorticists, and hysterical radicals of various persuasions.

Arthur Guiterman is singularly

free from poses and affectations for a writer whose work has been so highly praised. He reads his poems before women's clubs, but the adulation which he receives there does not turn his head. A dreamer of great dreams, he is intensely practical; always busy, he is also always serene.

A conscientious artist, a wise and friendly adviser of his younger fellow-craftsmen, a man who loves humanity in spite of its faults—such is Arthur Guiterman. And now that James Whitcomb Riley is dead, he is the most American of all poets.

*New York City*

## ARTHUR GUITERMAN'S VERSE

*From "The Laughing Muse," by Arthur Guiterman, copyright, 1915, by Harper and Brothers.*

### THIS IS SHE

On order that must be obeyed  
I sing of a dear little maid;  
A mirthfully serious,  
Sober, delirious,  
Gently imperious  
Maid.

And first we'll consider her eyes  
(Alike as to color and size);  
Her winkable, blinkable,  
Merrily twinkable,  
Simply unthinkable  
Eyes.

Then, having a moment to spare,  
We turn our attention to hair;  
Her tendrilly-curlative,  
Tumbly-and-whirlative,  
Super-superlative  
Hair.

Forbear to dismiss with a shrug  
Her nose, undeniably pug;—  
Her strictly permissible,  
Turn-up-like-thisable,  
Urgently kissable  
Pug.

Now, moving a point to the south,  
We come to an actual Mouth;  
A coral, pearliferous,  
Argumentiferous,  
Mainly melliferous  
Mouth.

Observe, underneath it, a chin,  
Connoting the dimple within;  
A steady, reliable,  
Hardly defiable,  
True, undeniable  
Chin.

By all that is fair! it appears  
We'd almost forgotten her ears!  
Those never neglectable,  
Tinted, delectable,  
Highly respectable  
Ears.

And last let us speak of herself,  
That blithe little gipsy and elf;  
Her quite unignorable,  
Absence-deplorable,  
Wholly adorable  
Self.

At last this naughty Touring Car  
Got drunk on Too Much Oil  
And went a-boiling up the Road  
As hard as it could boil.

And went a-plunging, tumbling down  
A dreadful, dark Ravine;  
And there it burns and burns and  
burns  
In smelly Gasoline.

Another little Touring Car  
Was very, very good;  
It always minded Brake and Wheel,  
And never splashed its Hood.

It wouldn't skid or anger Folks  
By giving them a Shove,  
But cooed as gently thru its Horn  
As any Sucking Dove.

### A TRACT FOR AUTOS

Come, all you little Runabouts  
And gather round my Knee;  
I'll tell you of a Touring Car  
As bad as bad could be:

It worked its Klaxton overtime  
To make a Horrid Noise  
And thought it Fun to muss up Hens  
And little Girls and Boys.

It used to blow its Tires out  
To hear its Owner swear,  
And loved to balk on Trolley Tracks  
To give his Friends a scare.

It never grew Unmannerly  
To Market-Cart or Dray,  
But whispered "Please," and "Thank  
you, Sir,"  
To those that blocked its Way.

It never scattered Bolts and Plugs  
About the Countryside,  
But did its level Best to be  
It's Owner's Joy and Pride.

So, when 'twas time to yield its Place  
To Models fresh and new  
This lovely little Touring Car  
Developed Planes and flew!

## A RIMED REVIEW OF "LADDIE"

*Reprinted by permission from Life, December 4, 1913*

In Indiana,—for whose charms  
Her children show a proper bias,—  
The Stantons tilled their fertile farms,  
Prolific, prosperous and pious.

Young Laddie was the Stantons' pride;  
His crowding virtues half repel us;  
And how he won his English bride  
His Little Sister tries to tell us.

'Twas Pamela who had a twist  
On Laddie's heart; the maiden's sire  
Was —ah!—an awful Atheist!  
Who said his name was "Mr. Pryor."

He sternly shut himself within  
The handsome country-house he stayed at,  
For fierce he was and proud as sin  
And strangely hated being prayed at.

Because he thought that Bob, his son,  
Had thieved his gold, he moped and brooded;  
But Robert hadn't ever done  
The deed to which I've just alluded.

How bravely Laddie urged his suit  
I'd like to tell at length, but daren't.  
He gained the lady's love; to boot,  
He hypnotized her crazy parent.

Then Robert, whom his angry dad  
Had wildly sworn to pound to jelly,  
Turned up, and proved he wasn't bad,  
And married Laddie's sister, Shelley.

With talk of farm and wood and vale  
And chickens, daisies, geese and clover,  
The story drags an inky trail  
Six hundred pages long and over.

The Stantons all are good and kind  
And joyful, too, and hearty feeders;  
And scattered here and there we find  
Quotations from McGuffey's Readers.

I love the little birds that sing,  
I love the little lambs that frolic;  
And still, you know, there's such a thing  
As being somewhat too bucolic.

© Underwood & Underwood

## THE PRESIDENT, REELECTED

# EVERYMAN'S OFFICE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**T**HE modern office is the ante-room to professional or industrial success. No matter what your ambition may be, the route must pass thru the office, be mapped by the office. The solution of nine-tenths of a man's business problems may be had, either directly or indirectly, from the new science of American office management. The study is of basic value and interest; first, because every man or woman who expects to do things worth while now has, or later will have, an office to be managed; second, because anybody with a primary education and ordinary common sense can apply the fundamental principles at once—there are no technical terms or abstruse calculations involved, as in most departments of business organization; and third, because the study generally produces a corresponding change for the better in a man's own life, a productive system for the office ending in a productive system for the home.

The best way to do anything opens a better way to do everything. The best way to manage an office opens a better way to manage a home, a school, a church, a farm, a brain, a

purpose, a life. The *principles* of productive, economical, influential management are the same everywhere. To the professional man, the business owner, the office manager or the department head who wants to increase the output and decrease the cost of office work, we would submit the following line of approach to his problem: First, read two or more of the new books on office efficiency, to gain a broad view of the subject, leaving pencil check on margin opposite any points worth future consideration, and having your secretary go over these items, to classify and index under office departments. Then organize new departments, or expand old ones, to complete a modern office staff and cover a scientific schedule, putting items you have checked in care of the department head concerned. Then subscribe for at least one professional magazine, and buy at least two recent books, for each major department, such as "The Cost and Accounting," "The Advertising and Selling," "The Appliances and Equipment," and so forth, instructing each department head to locate all new and good plans or ideas, answer the advertisements

that appeal to him, and report to you. Then you will have an excellent beginning for an A-one office.

In case your force is large you could profitably give special training to your head men—by correspondence courses, personal visits to national corporations, or individual consultation with business engineers of different kinds, called by you to examine your office equipment and personnel. If your clerks are few one may act as head of several departments; but have the entire office and corps departmentalized, charted, scheduled, and managed right—even if your present staff consists of a typist and an office boy.

The main divisions are these: Construction, arrangement, equipment, employment, organization, execution, finance, recording, buying, shipping, storekeeping, mailing, filing, education, stimulation, supervision, expansion, the desk and day of the manager. We offer suggestions under each.

1. *Construction.* Locate if possible in high office building for more light and air, less noise and dust, better conveniences. Guarantee proper ventilation by consulting engineer. Com-

## EFFICIENT OFFICE TEST

FOR COMPUTING AND INCREASING THE VALUE OF  
YOUR OFFICE PLAN, METHOD, FORCE, AND EQUIPMENT

**DIRECTIONS.** First read Mr. Purinton's article, "Everyman's Office." Then ask yourself these questions. Where answer is Yes, write numeral 5 in blank space. Where answer is No, leave space empty. Where answer is indeterminate, write numeral between 1 and 5 that expresses degree of assurance. Obtain your efficiency grade by adding numerals, but consider Test only partial and approximate. Queries, difficulties and problems will be answered gladly by Mr. Purinton so far as practicable, if address care The Independent Efficiency Service, 119 West Fortieth Street, New York.

1. Is your office departmentalized and standardized, on lines of Mr. Purinton's article?.....
2. Have light, heat, ventilation, drinking water, luncheon, been approved by experts?.....
3. Are all routine manual operations by machine, with employees paid for *thinking*?.....
4. Do you publish an office manual, and train all workers in its use?.....
5. Have you a straight-line routing process in faultless operation? .....
6. Do you engage, transfer, promote helpers by vocation, character and efficiency tests?.....
7. Are there at least twenty-five standardized office forms, printed or duplicated?.....
8. Have you compared each item of equipment and supplies with two or more other kinds?.....
9. Do your stenographers type ten square inches an hour for every dollar a week in wages?.....
10. Is your production 25 per cent more, with costs 25 per cent less, than a couple of years ago?.....
11. Does each employee average less than five days a year in lay-off?.....
12. Have three-fourths of your employees stayed with you permanently? .....
13. Is Mr. Purinton's definition of Efficiency understood and carried out by all the force?.....
14. Does every worker follow a calendar-clock time schedule for all work?.....
15. Does every department head belong to some efficiency organization? .....
16. Have you a house organ, a suggestion box, a bulletin board, a chart series, a reward system?.....
17. Can you personally do eight hours' work in six hours, comparing former schedule with present?.....
18. Have you read at least two books on office management, one on costs, one on advertising, one on personal efficiency? .....
19. Do you take a general business magazine, an office journal, and a "trade paper" for each department?...
20. Have you instituted welfare work on approved lines with results that satisfy both company and employees? .....

Total gives your approximate  
grade in office efficiency

I WONDER IF THESE FIGURES ARE RIGHT ?

# INVENTORY

## -?-

In spite of the time you spend and the care you take with a mentally figured and checked Inventory, there is always back in your mind a question mark over that *fallible human equation*.

Now, just to the extent your Inventory is off, your Gross Profit figure will be wrong; and your Net Profit is only what's left after deducting Expense from the Gross.

The figures you get with a Comptometer and the Detachable Total-Strip Inventory Sheet, are not subject to doubt. When the first extensions are detached and the second operator—without knowing the results of the first extension—refigures the sheets, then, if the two totals agree, "you should worry." If they don't agree, it doesn't take long to find out why and where.

And besides the ACCURACY of it, it is so much EASIER, QUICKER and CHEAPER.

Time saving and accuracy considered, the Comptometer will pay for itself on Inventory alone. Yet that service is merely incidental to its everyday use on Proving Postings, Balancing Accounts, Footing Trial Balance, Extending and Footing Invoices, Figuring Payroll, Costs, etc.

Let a Comptometer man figure a few pages of Inventory for you and see how easily and rapidly you can handle this disagreeable work on the Comptometer. Such a demonstration is at your command without cost or obligation.

Ask for free sample Detachable  
Total-Strip Inventory Sheet

**FELT & TARRANT MFG. CO.**

1725 North Paulina St., Chicago, Illinois

WITH THE COMPTOMETER AND DETACHABLE TOTAL STRIP  
THERE CAN BE NO DOUBT OF ACCURACY

Speaking to a body of accountants, the Auditor of a well-known Electrical Concern recently said:

Without an hour of overtime, our Inventory was calculated and recalculated on the Comptometer at a labor cost of 81c per thousand calculations as against \$3.83 per thousand for the same work when done by mental figure clerks.

## Comptometer

# Santa Claus Suggests Parker Safety-Sealed Fountain Pens

No. 14—See description below

No. 70 See description below

For Christmas—what better gift than a **Parker Safety-Sealed**—the highest developed fountain pen in the world.

For the business man or woman—students—scholars—travelers—for the boys at the front and abroad—for Milady's desk or purse—there is no gift more appropriate or personal, a daily reminder of your thoughtfulness and good judgment.

**No. 20**  
**EMBLEM PEN**  
Fills itself in two seconds by merely pressing a concealed, safety-sealed button.

See your Parker Dealer's special holiday display of Parker Pens in Xmas boxes. All sizes, \$2.50, \$3, \$4, and \$5.

**PENS Illustrated**  
No. 14—Sterling Silver, \$5. 18 karat gold, same, \$6. Ring for chain attachment.  
No. 20—Bakelite Transparent barrel, \$3.50.  
Emblem Pen—Various orders, 18 k. \$6, solid gold \$10.  
No. 21½—Two gold bands, \$3.50.

## PARKER SAFETY-SEALED SELF-FILLER

The only pen in the world with **no holes in the wall** for ink to escape on the hands, clothing, fine linens, dainty purses. Carried in any position—it can't leak—it's **SAFETY-SEALED**.

In case of accident to filling mechanism it automatically changes from a self-filler to a non self-filler. Not put out of commission as would be the old style hole-in-the-wall type.

**Parker Pen Company**  
239 Mill St., Janesville, Wis.  
N. Y. Retail Store, Woolworth Bldg.

Initials or monogram on fountain add distinctiveness to the gift. Any jeweler can do this.

**No. 24**  
**PENS Illustrated**  
No. 70—Collapsible, price \$12.50. Unique. Beautiful. Cap and barrel covered with 18k. gold plate.  
No. 24—No. 4 gold point, \$1.00.  
No. 23½—\$3. No. 20—\$2.50.  
**CATALOGUE FREE.**

pare in detail the principal systems of lighting—direct, indirect, semi-indirect, and choose the one best for your office. Have partitions for all rooms of department heads. Paint walls a cheerful but restful color, with maximum of light reflection. Be sure that sanitary conditions and appliances of building are adequate, modern.

2. **Arrangement.** Map out floor plan on cardboard by route of letters and orders to be handled; trace progress of each order from mail desk to record of shipment, follow an order, see it checked, filed, executed; obtain itemized reports of all departments, on work done or undone; examine detail of desks and departments, guarantee a rapid, straight-line routing process thru office. Thus the mail, sales, and financial departments and the order clerk should be in line, with production and accounting departments close by, and manager near head officials. Estimate kind and amount of work to be done by each department, with number of helpers and size of equipment needed; then give each employee a minimum floor space of 100 square feet, including five-foot desk space, forty-two inch inter-desk space, three-foot aisle space, and equipment space large enough to avoid cramping (most offices err on the side of too little space). Have each group of materials or utensils placed around the person using it. Separate mental and manual departments, removing noisy operations (multigraphing, addressing, tabulating, and the like), so as not to disturb officials, paid for thinking. Let manager's desk afford view of entire office.

3. **Equipment.** Choose the "sanitary" type of desk with each adapted to requirements of work and user, and flat top in preference to roll top. Assign each drawer for special contents, all desks being standardized, and regularly inspected, with reports on condition and suggestions for improvement. Look up new forms of desks and devices now made for efficiency methods. Buy anti-fatigue chairs, with cane seat or wooden saddle seat, and spindle or adjustable spring backs, for routine desk workers. Give particular study to filing cabinets and systems; before installing any, or expanding, consult a filing expert or a modern book on the subject, and compare catalogs. Let all furniture harmonize in color and contour. Subscribe for at least two office magazines, read them yourself, and delegate employees to answer advertisements of new office appliances. Wherever possible, considering cost, amount and quality of work, substitute machine power for man power. Among the mechanical office aids worth investigating are these: Dictating machine, reducing average cost per letter from 4.3 cents, to 2.7 cents; typewriter with new speed attachments; portable stenographic machine, rate 150 to 200 words a minute; office cash register, to give itemized current statement of daily business; adding machine, guaranteeing in 30 seconds accurate total of fifty sums with six figures each; duplicating machines, capacity 5000 letters an

# Aches and Pains

vanish quickly after applying the powerfully efficient antiseptic liniment Absorbine, Jr. Don't experiment—use Absorbine, Jr., first, which saves time and money—only a few drops usually required to do the work.

## Absorbine, Jr.

THE ANTISEPTIC LINIMENT

Does everything usually expected of a high-grade liniment and in addition is a positive antiseptic and germicide. Its germicidal properties have been verified time and again by competent chemical laboratories and in actual practice. Being a germicide makes Absorbine, Jr., a better liniment and increases its usefulness.

Absorbine, Jr., is purely herbal and therefore safe to use anywhere. It is a clean, pleasant preparation—does not stain or leave a greasy residue.

# Your Office

**How efficient is it? Have you studied your equipment needs closely? Are you in touch with the best modern appliances and methods?**

As a reader of The Independent or member of the National Institute of Efficiency, you are invited to consult the Plan and Purchase Department of The Independent with regard to the selection and purchase of any equipment that may be desired to attain the highest degree of efficiency in offices, factories or business buildings.

This Department is conducted by the Efficiency Service of The Independent in association with the National Institute of Efficiency, which recently chose The Independent as its official organ.

For a limited time this complete efficiency service will be supplied to any reader of The Independent, or any member of the National Institute of Efficiency, without charge.

Upon receipt of each request for information a requisition chart is

supplied on which may be indicated the office needs of the individual or business house.

Upon receipt of each chart the Plan and Purchase Department, assisted by the National Institute of Efficiency, will suggest the most approved appliances for arriving at a high degree of efficiency in the office, reducing labor costs, increasing output and generally speeding up production.

It is the aim of The Independent in its Plan and Purchase Department to make its Efficiency Service more definitely helpful and more practical; to make The Independent not only the clearing house of modern efficiency ideas but also a free and unprejudiced aid to the purchase of equipment that leads to business efficiency.

The attached coupon will receive prompt attention. Mail it today.

## What 15c Will Bring You from the Nation's Capital

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Center, for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 31 year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39, Washington, D. C.

NAME \_\_\_\_\_

ADDRESS \_\_\_\_\_

hour, billing machines, addressing machines, accounting machines, printing machines—machines for almost every operation often repeated; pneumatic chutes and carriers, for messages and parcels; automatic pencil sharpeners; paper-fastening devices, obviating clips; mail openers, envelope sealers, stamp affixers; time cards and clocks, for speeding and standardizing routine work.

4. *Employment.* Hire every man by science—not by chance. Regard his health, ability, character, experience, mentality, personality, ideality, and see that he fits the job in view. Study how large concerns have reduced the cost of hiring, and training employees. Have requirements for all positions standardized and listed on a question blank, for applicant to fill out before personal interview. Arrange mental and mechanical tests, or adapt from other offices, to show knowledge and skill of applicant for each technical position. Get a few modern books on business psychology and character analysis; learn the importance of vocational fitness. Put each new worker on probation, with incentives and instructions for making good. Fill vacancies by promoting subordinates on a scientific plan.

5. *Organization.* List all clerical duties of each department; find total work to be done; apportion set jobs to each desk, on time-study basis; keep same helper on same job, to attain maximum speed—but in spare time put each worker on some other departmental task, to vary monotony and supply trained assistants for demands of rush season. Prepare office chart and office manual, give copies to each employee, and instruction for use. Where possible, assign employees to mental aptitudes—thus an “ear-minded” clerk becomes a good telephone operator, but an “eye-minded” clerk a better multigraph operator. Make everybody an understudy to somebody else, with promotion sure to follow merit. Appoint committees and conferences, evolve better methods in weekly or monthly meetings.

6. *Execution.* Aim at a production total 30 per cent or more in advance of the present, but avoid the common error of “speeding up” the work and not building up the worker. Get efficiency tables from industrial experts, on every motion made in your office and every piece of labor turned out; compare with your daily records; learn yourself, then teach your employees, how to make short cuts and equal average output of the best offices. Ask the companies manufacturing typewriters, desks, office machines, books, files, records and appliances, for literature on their methods and services—often you can obtain free an estimate for a better system or a new collection of ideas extremely valuable. Find the one best, quickest, easiest way to do everything in the office; put exact description on paper; file these instructions in cabinets or permanent scrapbooks; develop thus a standardized method for each job, and have it always done that way. List all duties and responsibilities of each employee with standard time for each job; and

work schedule complete, with items classified under Daily, Recurrent, Special, and enough of each to occupy employee every minute but not cause hurry or excess fatigue. Fix salaries not by time spent but by amount of work done. Promote on efficiency—not seniority. Pay expenses of delegates to visit great corporations and conventions, for new ideas. Beat last year's record in each department—or know the reason why!

7. *Finance.* Eliminate poor help—errors cost too much. Have all accounting, addressing, billing, and other routine operations done by machines, where amount of work justifies. Avoid bad debts by following methods of large collection agencies. Establish sources of information (given on request). Buy stationery, materials and supplies wholesale, having first standardized printed forms and records, to utilize large quantities. Print on your own duplicator. Pay by voucher checks. Have all supplies put in a regular place, and kept there. Encourage small economies in every department. Try fountain pens for accountants, with points made specially. Train clerks to seal and stamp envelopes on scientific principles. Buy and study a modern book on financing a business. Get the proper official to join a national organization of accountants, and subscribe for accountancy journals. Connect with foremost institutions such as the Federal Trade Commission, the National Chamber of Commerce, the National Institute of Efficiency, and learn their business economics. Engage a business expert to find and stop the daily office leaks.

8. *Recording.* Place every transaction in writing—leave nothing to memory. But save writing and typing thru a complete set of printed forms; such as time cards, inventory cards, requisition slips, report blanks, sale summaries, credit and collection card, personal memoranda, complaint and suggestion boxes, calendar reminders, pads for telephone calls and orders—twenty to a hundred printed forms are needed, according to kind of business and amount done. Employ loose-leaf records where possible; even catalogs are now made on the loose-leaf principle. Study all your records for three cardinal points: accuracy, availability, durability.

9, 10 and 11. *Buying, shipping and storekeeping.* While they are departments of office work in many cases, these items are really factory operations, to be learned in books, magazines and reports on factory management.

12. *Mailing.* Answer letters on first reading. Dictate in quiet room. Forbid interruptions. Keep same stenographer for personal correspondence. Try out dictating machine. Develop series of form paragraphs for routine letters, number each, refer to numerals instead of repeating sentences. Be friendly but crisp. Learn short-cut methods of correspondence, from business schools, typewriter companies, teachers of Business English.

13. *Filing.* Get one of the filing manuals recently published, see whether your filing system belongs in this con-

## Pay Day—and Nothing to Pay With!

"One of my checks has been raised. You'll all have to wait a few days."

He always wrote his checks carefully. This was one for only \$5. He didn't think it needed to be protected. But it fell into the wrong hands, as checks do; somebody "boosted" the amount to \$500 or so—and there was no money left at the bank for his payroll.

It's easy to raise any little check to hundreds or thousands, unless protected by

## Protectograph Check Writer (Todd Patents)

**••• FIFTEEN DOLLARSTWENTY SEVEN CENTS**

(Amounts in Red; Denominations in Black)

Protecting your check—(which means protecting your bank account) is so simple, so convenient, so easy with this instrument. It writes and protects the full amount in the body of the check, even quicker than by hand. Each character is "shredded" into the paper on the famous Todd principle and inked through and through the fibre. The crooks will give your checks a wide berth if you use the Protectograph System.

Protects in two colors.  
Price \$40.

### PROTOD Chemical Fibre Checks (Registered)

Safeguarded and registered like U. S. bank notes. Forgery proof. Furnished to users of Todd machines only. Write for samples and prices.

Are you still signing "old style" checks? ## When Physician Meant "Physic—Dispenser"

**I**N Shakespeare's time, if you were sick and went to a doctor he did one of two things. He either bled you or "physicked" you.

Physicians no longer practice bleeding. And the leaders of the profession are equally opposed to the indiscriminate use of laxative and cathartic drugs. In fact, the habitual use of laxatives is now known to be one of the most fruitful causes of constipation.

Physicians of the highest standing prescribe Nujol because it relieves constipation without any bad after effects and without forming a habit. It acts in effect as an internal lubricant, preventing the bowel contents from hardening, and in this way facilitating normal movements.

All druggists carry Nujol. Avoid substitutes. Write today for booklet, "The Rational Treatment of Constipation" using coupon below.

## Neurasthenia Symptom— NOT Disease

Neurasthenia is due largely to habits which may be corrected by giving attention to causes of the ailment

This is fully explained by Dr. John Harvey Kellogg, who gives you in his new book—"Neurasthenia"—results of his experience with thousands of cases treated during the forty years he has been Chief Medical Director of the great Battle Creek Sanitarium. Dr. Kellogg's book is not a dry book, nor couched in technical terms. On the contrary, Dr. Kellogg has the happy faculty of making his writings easily understood and intensely interesting. If you suffer from neurasthenia, or from other nervousness, or any other ailment, read the book. It shows the way out, teaches you how to correct the ailment, and the coupon below tells you how to get it.

**FREE Examination** Mail the coupon and we will send you "Neurasthenia" free of charge. If you prefer, we will send you a FREE examination. We will send you the book, or help you. There are many, many other things that Dr. Kellogg's book will tell you about. This free examination is a real test, and the coupon below tells you how to get it.

**Send No Money—Just the Coupon**

Send me, all charges prepaid, "NEURASTHENIA." All examination I will remit only \$1.00. I will return the book within five days at your expense.

(Write your name, address, business or occupation, in margin.)

tury, or the last. Judge it by these points: unit construction, minimum motion, accuracy of placement, ease of reference, economy of floor space, adjustment to business capacity for growth, safety against fire. Study main features of the different systems: alphabetic, numeric, geographic, topical, decimal, compound; fit a system to your needs. Have all loose papers, notes, memoranda, filed as carefully as letters. Put a filing clerk in charge of entire system, and train the clerk. Separate permanent and transient divisions, under current file, back file, and storage file. Prepare file index or catalog, so absence of clerk need not interrupt day's work. Use metal or celluloid guides, instead of cardboard. Investigate merits of new visible card index. Keep a daily "tickler file" going for each desk. Store valuable papers, duplicate dealers and customers lists in a fire-proof safe, not a filing cabinet.

14. *Education.* Give each employee, by oral and typed instructions, a broad general view of the company's aims and policies, and a keen, systematic knowledge of his own work. Teach concentration, responsibility, loyalty, enthusiasm, health, tact, optimism, thoroughness, ambition, speed, contentment. Organize a training school for employees with night study clubs, mail study courses, library features, and other personal aids; join a national business education association, learn how to train your employees wisely and well. See that every worker can pass examination with at least eighty per cent grade on his part of the office manual. Provide an efficiency test for self-grading, and a method for self-improvement as desired (the National Institute of Efficiency publishes a test of value to employees). Look up educational methods of the most powerful corporations, emulate, adapt. Order an efficiency book or booklet for every employee; discuss it, apply it.

15. *Stimulation.* Incentive is the backbone of industry. Compare the methods for rewarding employees—by cash bonus, merit mark, commission, prize contest or promotion. Resolve to maintain a scheme of rewarding scientifically, each week or month, every body in your office who will turn out more and better work.

16. *Supervision.* Require weekly statements from department chiefs to office manager, and daily reports from the employees to their respective chief. Compare tabulations of work done by each department with past record, with standardized performance and with future possibility. Show status of each department by grade cards or the "graphic chart." Frequently go thru a file drawer, a bunch of outbound mail, a set of carbon letters, find and correct mistakes, obviate recurrence by memorandum of constructive criticism, typed for the individual—not presented orally.

17. *Expansion.* Look ahead five, ten, twenty years. Plan for growth of your work, office, equipment, employees, duties, opportunities. When you buy a desk or a machine, put it first in your mental picture of the business head-

quarters in 1930. Look at yourself in the same light—what do you need, professionally or personally, to make you big enough and strong enough to handle twice the job and earn twice the pay of the present? Hire, handle, train, promote your employees with the future of each clearly in view. Study every large concern in your line, locate your faults and deficiencies, then dislocate them. Draw a map of the progress you will make—and regularly find where you are.

18. *The desk and day of the manager.* The first man to educate in your office is the manager, particularly if he is you. Running an office right is learned only by experience. A few required traits: Execution large; system and sympathy blended; outlook and insight balanced; thoroughness a watchword; influence good and strong; knowledge of human nature; kindness, optimism, keenness, discipline; current trade progress; love of work, business experience in as many office lines as possible. A few suggestions: Make a list of everything you have to do, classify according to calendar, on a big sheet, rule four divisions—Day, Week, Month, Year, and type list for each division, totals covering all duties and responsibilities. Then take small sheet, apportion day into hours, half-hours or ten-minute periods, and put day's work on exact schedule. Follow same plan for each employee, and check up frequently. Train your secretary to keep memorandum system perfectly, and take all routine burden from your mind. Start your work at eight in the morning, or earlier; and close your desk at four or five in the afternoon—you will gain at both ends. Promptly file every paper, keep your desk absolutely clean. Build your private office sound-proof, let stenographer be outside. Hold short daily conferences with department chiefs, and weekly meetings of the entire official staff. Make each day's appointments conform to schedule. See visitors, except most important ones, by previous engagement only. Use telephone wherever possible, but file memorandum of all telephone transactions. Look into modern electric devices, such as the annunciator, call button, and indicator system for reaching anybody instantly; the dictograph without oral transmitter, for conveying simultaneous orders to each department or reporting conversation without presence of stenographer; the telautograph or electric pen attachment, for writing a message and reproducing at once in various parts of the building or even miles away, by electric wire and fountain pen receiving instrument. Make a study of combining courtesy and brevity. Educate other officials to do all your work they can do, leaving you free to plan, supervise, initiate, enlarge, improve. Join business clubs, chambers of commerce, efficiency societies, trade associations, and learn what the other fellow is doing to make his work better than yours, the secrets of both service and profit lie in the science of management. To manage your work, you must first manage yourself.

This is a plea for efficiency and personality—for system *plus*—for Art Metal *Steel* office furniture that *won't warp, stick nor burn*—for files, desks, safes, etc., that are sanitary and safe.

Art Metal is the most versatile and comprehensive line of *steel* office furniture in the world. There are files for every purpose, and being built on the *sectional* principle, they grow as your business grows. This permits you to *standardize* your office equipment.

Compare Art Metal with other makes. Edison did, and he chose Art Metal. So did the Overland Automobile Co., the Standard Oil Co., Yale & Towne, the New York Municipal Building, and hundreds of other large and small users. That is why over 75% of *all* the steel office equipment in use is Art Metal.

Art Metal finishes in Oak, Mahogany, Circassian Walnut, Rubbed Maroon and Olive Green surpass their wooden prototype, and will harmonize with the color theme of *your* office.

Our 96-page book pictures the complete Art Metal line. Send for it, and for our new *Business Journal*, "Making Office Work Easier." This book illustrates ways of laying out offices to save space and space, and suggests methods for the *safe* filing and *sure* finding of various sorts of business records.

The coupon will also bring you the address of your local Art Metal dealer.

*His First Consideration  
Costs You 1/10 of a Cent*

# CONSTRUCTION BOND

The bigger the man the more demands upon his attention—and the more important for you to interest him.

Being big, he gives first consideration to letters which look important—and at that instant you gain or lose his favor by the character of your stationery.

Stationery on Construction Bond has the character that gains the favor of big men. Yet this substantial paper costs *per letter* only one-tenth of a cent more than the shoddiest. Obviously "it pays."

So make a note now to write us for latest letterhead suggestions on Construction Bond. We will send you names of those stationers in your locality who carry Construction Bond in stock and produce fine stationery upon it.

*Look for this watermark in the stationery of firms of recognized importance. You will find it frequently.*

## Independent Opinions

Perhaps we are too ready to concede that public business cannot be as efficiently conducted as private. At any rate we are glad to have somebody speak up for the postoffice from his own experience:

In a recent editorial of *The Independent* that I thought very fine and timely, on looking "Towards Government Ownership," I notice a comparison that you made that strikes me as being wide of the truth and very unfair to our excellent postal service. You say, "It is probably true that government operation under existing conditions of political development does not mean the most economically sound operation. Any of our great railroads, for instance, is better organized and managed from the dual point of view of efficiency and economy than our postal service." If you confine your comparison to the "great railroads," then you should also confine your comparison to the post office in its operation between the great cities and on its main lines of operation.

Even then I think that the post office would win. You must remember that the post office as a whole extends its service to every village and every hamlet over this broad land. It follows the pioneer wherever he goes, even away up into frozen Alaska. Not only that, but it reaches out beyond the villages to the farms and gives free rural delivery.

Very much of its work is benevolent, considering not the making of money, but the welfare of the people. With this end in view it plants its offices in every new town, not considering whether it pays or not.

Now if you wish to be fair with an institution of this kind in comparing with the railroads you should include in your comparison all of the railroads of the country, both large and small, and strike an average of their efficiency and economy, then compare them. Railroad men have pointed out that twenty per cent of the railroads are in the hands of receivers. Even among the "great railroads," how about the efficiency and economy of the great Rock Island system and the New York & New Haven, of the Gould roads, Wabash, and others, that were milked of their earnings and their maintenance neglected?

I can remember when the postage on a letter was five cents for a half ounce; today it is two cents for a full ounce, and they cover over double the area now that they did then. Very rarely do I detect a delay or a failure in the mail service. I would have to report the Chicago Post Office 100 per cent efficient.

Recently our traveling man East sent us a wire from Boston, saying that his letter would explain a matter mentioned. No letter came and I was intending to report it to our post office. After a few days we received it and saw on the envelope that our man had addressed us at our street and number, but Boston instead of Chicago. No mark on the envelope showed where we were located; they had looked thru the directories of the different cities until they found us and then faithfully forwarded it voluntarily. Had our man addressed a valuable package by express in that way we never would have got it, unless we had sent a tracer to look it up. The post office takes three times as much pains, voluntarily, to forward a two-cent letter, if illegally addressed, or misdirected, as the express company or any other transportation company would do.

We are now shipping all of our small

GOOD taste displayed in all the rest of a man's attire will not overcome the poor impression created by loose, sagging socks. The Boston Garter keeps them snug and smooth all day.

packages, that formerly went by express, by registered mail. I asked my shipping clerk if he ever had any fault to find with the service of the post office and he promptly answered, "No, not in the least." Many years ago the business men of New York and Chicago began to use the mails for small packages instead of the express companies, when prompt delivery was required, marking them "Twentieth Century Limited." Such a package delivered at the New York Post Office before twelve noon is unfailingly delivered down town in Chicago at one's office by about 11 a. m. next day—twenty-three hours. No express company has equaled that. I consider the post office the biggest and the best managed running concern in the United States.

Chicago

J. M.

Dr. Iyenaga, managing director of the East and West News Bureau, sends us the following comment upon the article which we published by the Rev. J. Ingram Bryan on "An Extraordinary Concession by Japan."

Mr. Bryan, well versed in Japanese affairs as he is, has made a mistake in asserting (in the first paragraph) that "one of the chief difficulties of the immigration problem has been the refusal of the Japanese Government to acquiesce in the naturalization of Japanese subjects abroad" or (in the second paragraph) that "a Japanese born at home and going abroad temporarily or permanently is not allowed foreign naturalization."

As a matter of fact Japan has given to her subjects the right of expatriation by the Law of Nationality which went into effect on April 1, 1899. In Article XX of that law it is affirmed that "A person who has acquired a foreign nationality by his own choice loses Japanese nationality," which is merely to say, in other words, that a Japanese can become naturalized abroad if he so desires and if allowed to do so by a foreign country, but *ipso facto* loses Japanese nationality. However, this privilege of expatriation is hedged about by Article XXIV of the Law of Nationality wherein the obligation to serve in the army makes it difficult for a male of seventeen years or upward to be expatriated, altho those who have completed their military service and those who for any reason are exempted from military service are allowed to do so. Naturalization of Japanese in America is at present practically out of the question, unless Congress grants it by special legislation or the verdict of the Supreme Court is pronounced to that effect. But to think that "Japan has hitherto forbidden her subjects to become naturalized in America" is altogether wrong.

The purpose of the new Expatriation Law is thus simply to allow the Japanese under seventeen years of age, who were born in America and are, therefore, American citizens according to the law of this country, to be expatriated if they wish.

New York City

T. IYENAGA

On pages 114, 122 and 135 of your issue for July 24, the times are spoken of as "this critical period," "at so critical a time," and "in these days of trial." For my part I see no crisis in this country's affairs. The same expression has been used in every presidential campaign since that of Garfield versus Hancock, in 1880, the first I was old enough to follow.

Do you really think this is a critical time for the United States?

WILLIAM B. ROCHESTER  
Rochester Farm, Catskill Mountains

All times are critical, perhaps equally so since the chain of cause and effect is continuous. But with the greatest war of the world's history now in progress and the United States involved in all sorts of international, financial, industrial and political questions we believe we are justified in talking about "the present crisis" and we shall continue to use such phrase.

# MOTOR PROGRESS

*Conducted by John Chapman Hilder*

**T**WO weeks ago, in this department, I quoted excerpts from a paper which told some of the things a business man should consider before buying a truck or delivery car. The main theme of the paper was that the selection of a commercial vehicle should be governed not so much by technical details of truck construction, such as the various forms of drive and the like, but by the requirements of the work to be done. A truck or delivery car gives its fullest value when it is kept constantly at work. It is obvious, therefore, that a truck which is too small and must be overloaded and which has frequent breakdowns as a result, will not turn out to be a profitable investment. It is no less obvious that a truck which is too big for its work, and is never fully loaded will only be delivering part of its value. It, too, will not be a profitable investment. The trick of the successful buyer is to choose a machine of the right type, weight—capacity—and speed.

Models now on the market range from those of less than one-half ton capacity up to big fellows capable of carrying seven tons and over. In this range are four or five capacities which seem to have earned greater popularity than the others. They are what might be called standard sizes. They are the 1500 lb. delivery car, the 1 ton truck, the 2 ton truck, the 2½ ton truck and the 3½ tonner. The sizes which have fallen somewhat into disfavor, or let us rather say, disuse, are the less-than-½ ton, the 3 ton, 4, 5½ and 6½ ton sizes.

**F**IRST let us consider the delivery car and the work for which it is fitted. That is more or less determined by its name, except, of course, that everything carried in any vehicle is "delivered" somewhere, and the delivery truck, proper, is not supposed to haul big crates, heavy machinery, barrels of cement or, in fact, anything but light packages.

Delivery cars find their greatest field probably in making store deliveries—department stores, bakeries, grocery stores, milliners, shoe emporiums, and the like. And their work is arduous in the extreme.

Delivery cars must be endowed with two great qualities—speed and endurance. They require speed because they have to cover wide areas in the shortest possible time. The store whose system cannot deliver the goods on time consistently is in more or less danger of becoming decidedly unpopular with its customers.

The delivery car needs endurance, for it is driven at comparatively high speeds over all kinds of roads, in all kinds of weather. And even under the best management it is apt to be put into the hands of a driver who

does not care how he treats it. From observation, it seems to me that the army of delivery car drivers are born with few of the finer sensibilities. They lack the feeling, possessed by good chauffeurs, that delivery cars have feelings—that they should be treated with care and with a certain consideration.

**I**N buying a delivery car, therefore, look above all for staunchness combined with speed. Look also for simplicity. The more nearly foolproof the mechanism, the longer will be its life. Easy-riding qualities—for which examine the spring suspension—should be insisted on—less for the sake of the driver than for that of the merchandise, which is frequently fragile. Beware of flimsy construction—especially in the rear end, in the front axle and in the steering gear. The driver of a delivery car can seldom choose his roads, and the vehicle should be able to stand up thru month after month, and even year after year, of bumpy going.

It is a good plan to figure out in advance the amount of ground the car will be obliged to cover in an average day and divide up the territory into zones. It might be, for instance, that the majority of your customers lived in two groups—one due north from your store and one due south. In such a case you would have to decide whether one car could reach both zones the requisite number of times in a day, or whether two cars would be necessary.

**I**T is absolutely essential to the economical operation of commercial cars that they should always start out with a maximum average load. This distributes the delivery cost over a number of items. It is absurd to put a few little things into a big truck and send it out when you might put them into a small one that would cost so much less for the same distance. It might pay you to buy one 1500 pound car and another very much smaller, one for the north route, the other for the south route, or vice versa. Every man must base his vehicle needs upon the requirements of his business. And when he is figuring along this line, he

should not forget to count on a probable increase of business.

The question as to whether delivery cars and trucks should have self-starters and electric lights is more or less open. More makers are offering these on their 1917 models than on their past year's models.

**I**T is obvious, of course, that if the machine is to be used for much night work—and delivery cars are frequently used a great deal at night—electric lights are desirable. If many stops are to be made—and delivery cars have to stop almost every other chug—a starter would seem to be desirable, too. Cranking the car, say, fifty times a day or more, is apt to have a rather enervating effect on the driver. On the other hand, however, self-starters on delivery cars have a habit of refusing to work so frequently that their value is doubtful. You see, when a machine makes many stops, without running much between stops, the generator has no chance to charge the battery. In winter, especially, the self-starting system is prone to lie down, since the battery action is slower in low temperatures.

Pneumatic tires are almost always furnished on delivery cars. Indeed, they are necessary, for solid tires are not meant for fast running and would soon cause the machine to be jolted to pieces.

These are the major considerations in buying a light delivery car. First find out the kind of work to be done, the average load, and the territory to be covered; then choose your car with these requirements in mind and watch out for any accessories that may make for more efficient delivery. The things to look for in some of the heavier varieties will be taken up in a later issue.

## USEFUL ACCESSORIES

It is not generally known by motorists, especially new ones, that half the damage done to tires is done right in the garage when the car is not running. Standing night after night—or day after day, as the case may be—with the whole weight of the car upon one point in each tire, these points soon begin to show wear. You see, tires should be given a chance to rest, and to become thoroughly dry. If you drive into your garage when your tires are damp, or if the floor of the garage is wet, or oily, and just leave the car standing on the tires all night, that part of the tire which is in contact with the floor has no chance to dry out. Also, instead of the strain being distributed all around the tire, as it is when the car is running, the point of contact has to bear it alone.

To jack up the car in the usual way is tedious, and the car is not oversteady on the ordinary jack. To jack the car up and put wood blocks under the axles is still more tedious. The best way to raise the car from the ground is by means of a set of four special jacks, which are made to fit under the front and rear hubs of all four wheels. These jacks raise the wheel with one motion, and the light and simple, are strong enough to support the heaviest machine. They cost \$5 a set.

*Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product.—Address Motor Editor, The Independent, 119 West 40th Street, N. Y. C.*

# The New Books

## A ROMANTIC LIFE

One of the most fascinating missionary biographies ever written is the story of *Mary Slessor of Calabar*. It has the romance of heroism and adventure, the vitality of vigorous achievement, the freshness of pioneering in a land of strange peoples and weird customs. The heroine was a Scotch girl born amidst the humblest surroundings and conditions, which made her at fourteen and for fourteen years a mill worker in the city of Dundee.

The inspiration of a great ideal and her consecration to the tasks of mercy developed her character and personality, and produced a noteworthy breadth of sympathy and of outlook. Her native ability and experience gave her an unusual understanding of others, a courage and decisiveness of action, a dignity and deftness both in speech and writing that made her a power. From her early childhood she was interested in the missionary efforts along the old Calabar coast, and here from 1876 until her death in 1915 she carried on, often alone and in the midst of danger, a pioneer work for the reclamation of the savage tribes. This well written memoir, based chiefly upon her many letters, gives the reader a striking picture of the barbarous life and customs of the natives of Calabar and shows the uplifting power of civilization.

*Mary Slessor of Calabar*, by W. P. Livingstone. Geo. H. Doran & Co. \$1.50.

## ELIHU ROOT

The literature of government and law has its most substantial contribution of recent years in the collected addresses of Elihu Root, now issuing, volume by volume. Two of the six announced are out. The books are in excellent style, print, and binding, some five hundred octavo pages each, and for what they are very low in price. All this is but justice to Mr. Root, to the world and to the students and statesmen of today and tomorrow, for these addresses are, especially those on International Law and controversy, important to the country, as those by Daniel Webster on Constitutional Law were when uttered, and yet are. Mr. Root never talks without having a definite, large object, and this he unfolds clearly and appropriately, in short as a true orator.

The first volume (they are issued separately but uniform) contains his *Addresses on International Subjects*, made, as president since its organization in 1907, before the American Society of International Law. His first word there was on the need of popu-

# Let these Men Teach You ADVERTISING & SALESMANSHIP

Then you can earn \$3,000 to \$10,000 a year, the average salary of Advertising and Sales Managers. They earn this splendid salary because they are Creators—men with power to make their dreams come true.

## Can You Succeed in Advertising?

Some men are by nature better fitted for one thing than another. Before you enroll in our Home Study Course in Advertising and Salesmanship we want you to be sure that you have the ability to succeed as an Advertising or Sales Manager.

**FREE Personal Analysis** To help you determine whether or not you are qualified to succeed in this field, we have arranged with a well-known Vocational Director personally to analyze you free of charge before enrollment. This valuable service will give you an unbiased estimate of your qualifications. The acceptance of your enrollment is almost a guarantee of your success, because we will take only those we know can succeed.

**What This Course Will Do For You** The organizers of this course whose pictures appear above, paid the price of effort and application for their success. When you complete this course you will be ready immediately to fill a position as Advertising or Sales Manager. You will have had practical experience because all through the course you will be required to do actual work. This will insure your success. The course is nine tenths practice and one tenth theory. Every lesson carries the "human touch" that makes you anxious for the next one. You will write copy for advertisements, booklets, mailing cards, folders, and magazine articles; learn how to analyze markets; plan complete advertising and sales campaigns; edit house organs; conduct a mail order business and write strong, convincing "human interest" sales letters. Entering this course will be like going to work as an assistant to a master Sales or Advertising Manager in a big corporation.

**You Save 10 Years' Time** To your own ability you can add all the knowledge and experience of these practical and successful men. You can learn more in two or three months under them than you might otherwise learn in a lifetime. You can skip off at least ten years of hard experience. They can develop in you the vision, the creative power, the "selling sense" of a successful Advertising or Sales Manager.

time-saving methods and the

## Commercial DUPLICATOR

### Hundreds of Manufacturers and Jobbers Save More Than 1/3

of the time formerly required for this work—and save delays, reduce errors, simplify details, cut expense. One big concern with eight of our machines is filling orders one-third faster and has eliminated 37 typists and 8 checkers. Many manufacturers get copies of orders for shop foremen, billing, bookkeeping, draymen, shipping, bills of lading, etc., all with one writing and without carbon paper. The saving of time is always important; the saving of money frequently pays for the machine in 30 days.

Quicker handling, reduced labor and less expense are all possible in your order, billing and shipping departments and we can prove

it. There are many other jobs around your office which you can put on your Commercial Duplicator saving time and money. One boy or girl does it all. No type to set. No stencils to cut. Copies are made direct from original matter written with pencil, pen or typewriter. Reduces errors. The Commercial Duplicator is the easiest working, fastest, most universally adaptable duplicating machine in the world. It will help you speed up your order, billing and shipping work, reduce errors and cut expense. Tell us how you do that work now and get our money-saving facts by return mail. Write now.

## Weeding Out Your Investments

Many of our readers may hold securities which have a questionable value or which are not suitable to their individual requirements.

Investments should be sifted occasionally, eliminating those which have little intrinsic value and purchasing those having a sound investment standing and a good future.

The services of our Investment Department are offered to those of our readers who may not be satisfied with their present investments.

An article on this subject by our financial editor, Luigi Criscuolo, will appear in The Independent of December fourth.

lar understanding of international law, and time has notably sustained his view. A dozen other addresses are given, on the Russian treaty, Ship Subsidies, Panama Canal, Japan, the Monroe Doctrine and other problems. *Government and Citizenship* is the general title of the second book. It contains with other papers, his four Dodge lectures at Yale on the citizen's part in government; the Stafford Princeton lectures, and some fifteen speeches at the state constitutional conventions of 1894 and 1915. Editorial introductions are by James Brown Scott and Robert Bacon.

*Addresses on International Subjects. Addresses on Government and Citizenship*, by Elihu Root. Harvard University Press. \$2 each.

### SOLDIER PRIESTS OF FRANCE

The French priests responded in thousands to the national call to arms and took their places in the line of defenders with the same patriotic spirit as their lay comrades. As René Gaëll, in *Priests in the Firing Line*, shows they went further, for, except when performing a sacred office, their attitude exhibits the light hearted gaiety of the *poilu*.

"Yesterday," writes one of them, "there was a great distribution of prizes. I picked up two, but the one in my leg doesn't count. As to my arm, why—that was a better shot! Only, the bullet did not remain there. Your friend's always the same, he never could keep anything." But occasionally there comes a tense struggle of conscience, as when the Abbe Marny was forced by circumstances to creep up on a German sentry and strangle him with his bare hands, a different matter from shooting an enemy at long range. Could any situation hold a more tragically dramatic moment for one who had vowed himself to a life of human charity?

*Priests in the Firing Line*, by René Gaëll. Longmans, Green & Co. \$1.20.

### METHODISM: A CLOSE-UP

Since Trollope's "Barchester Towers" there has been no more candid and clever unveiling of church politics than in *A Circuit Rider's Widow*, by Corra Harris. The story of the life of a church in a middle Georgia town; with its saints and semi-saints; its choir quarrels; its "lady serpent"; and its imperfect living stones built into the walls of the structure, is told with Mrs. Harris' irresistible humor and keen analysis.

The chapter which deals with the conference is a remarkable account of the polity of the Methodist Church; its efficiency is equal to that of any worldly corporation; its intrigues for preferment are those of any ambitious politicians. There is much sharp criticism of the arbitrary methods of the leaders, but, surely, there was never a more tender tribute to the fidelity and self-sacrifice of the rank and file of the Methodist ministers. The ministers' wives, upon whom the peculiar burdens of the itinerant press most heavily, are described with humorous understanding; and the circuit riders' widows, if Mary Thompson is a fair

representative of them, are rare and excellent women, imperfect enough to be lovable, but helping build the Kingdom of God on earth by their energy and devotion. Happily, we are spared a Mrs. Prondie, tho Mrs. Harris admits a few "termagant saints" to membership in the Barton church.

*A Circuit Rider's Widow*, by Corra Harris. Doubleday, Page Co. \$1.50.

#### WILLIAM BLAKE, PROPHET

*Vision and Vesture* is an alliteration that fits the study offered by Charles Gardner to those who bow to Blake, and who, to tell truth, sometimes ignorantly worship. Blake was a mystic, perhaps the greatest of modern mystics. His vision was manifold and the most effective vesture for it was art. Without vague rhapsody, and with apt citations and reference to Blake's writings, which he places near the Hebrew prophecies, and his art, which in significance he ranks above that of Michael Angelo, Mr. Gardner brings out Blake's meaning; giving him a contemporary place in thought, and in the vision of life and of the eternal; finding in him the essential values that he finds in Goethe, Nietzsche, Strindberg, Shaw and Yeats. In these as in a host of others, Ibsen, Whitman, Besant, Eddy, Synge, Mr. Gardner sees a struggling toward harmony of the good and evil forces of the spiritual world as set forth by Blake in his "The Marriage of Heaven and Hell."

*Vision and Vesture, a Study of William Blake in Modern Thought*, by Charles Gardner. E. P. Dutton & Co. \$1.25.

#### THE GREAT WAR

H. Pear Adams has made in *International Cartoons of the War* a striking collection from the newspapers of the Allied nations, from Germany, Argentina, Holland and the United States. All are grim, those from France the most bitter. (Dutton, \$1.50.)

To understand how the King of Greece has been overruled by one of his subjects there is no better book than the life of *Eleftheros Venizelos*, by Dr. C. Kerofilas. Born under another flag he became the supreme leader of Greece and has led that country into three wars. (Dutton, \$1.25.)

Lord Cromer introduces Arnold J. Toynbee's *New Europe*, a keen endeavor to search out the influences in the remapping of Europe, of culture, speech, religion, national spirit, forces not physical that must be considered if a lasting peace between happy peoples is sought. (Dutton, \$1.)

Eight years ago in "Aerial Warfare," R. P. Heane tried to stir England to preparation for *The Zeppelin and Super-Zeppelin*. By the last he means the war or commerce air hip of the near future. A skilful book that no Englishman will keep by his bedside along with Howell and Montaigne. (Lane, \$1.)

In *Doing Their Bit*, Boyd Cable takes the reader into sewing machine, tobacco and other factories, transformed into munition plants. Old men and women and young girls work side by side from 5 a. m. to 8 p. m. Many well to do "do their bit" because former workhouse dwellers with "I see possible shell" for their slogan. (Dutton, \$1.)

*With the Turks in Palestine*, by Alexander Aaronsohn, pictures the satisfactory position of the Jew under Turkish rule before the war, then the brutal change which he leads us to infer was due to German influence. With many of his race he served in the Turkish army, only to be treated

# "Doctor—What Shall I Take for Constipation?"

By William Meredith

CONSTIPATION is rapidly becoming the Great American Ailment. If you do not suffer at some time or other, you may consider yourself extremely fortunate, for scarcely more than one person out of ten escapes. When we are cross, nervous, irritable—when we lack energy and strength, when we have headaches, when we are troubled with gas, fermentation, acidity, the reason usually can be traced back to constipation.

"I once examined 20,000 diagnosis blanks," writes Dr. B. F. Roller in a recent article in the "New York Herald," "and found that ninety per cent of them contained the constipation complaint." And if we needed still further proof of the prevalence of intestinal congestion we need only think of the thousands of tons of salts, pills and other cathartic drugs which are consumed annually.

Because nine out of ten people are troubled with constipation in greater or less degree, I have no doubt that every physician is asked hundreds of times what to "take" for it. It would seem that the average person feels, so long as something can be "taken" for relief, he need not worry about the complaint itself. And, indeed, there would be no great cause for worry except that instead of removing the cause of constipation, laxatives merely relieve the effect.

As the world's greatest medical authorities have time and again said, all laxative drugs contain some poisonous element, and the reason they give temporary relief is because Nature, rebelling against their entrance into the blood flushes the intestinal tracts with all the body fluids she can muster. But, not only are these essential digestive fluids wasted, thereby aggravating the cause of constipation, but the food passes out of the stomach long before any nourishment is extracted from it, which explains why we are sometimes weak after having taken even a single physic. For these reasons the use of laxative drugs should be discouraged. Physicians say the more often we take laxatives the less we can get along without them. The muscles of the stomach and intestines become weak and inactive through lack of use, if we continually help them by taking medicine.

"Well," you say, "if I am not to take laxatives, what am I to do?" The logical answer is that instead of devoting your energies to some method of getting rid of the waste AFTER it has formed, you must PREVENT intestinal congestion by so balancing your meals as to assure perfect elimination.

"The trouble is," said Eugene Christian, the eminent food scientist, to me

recently, "that not one person in one hundred knows how to select and combine their foods." And he went on to explain how a great many good foods when eaten in combination with other good foods, create a chemical reaction in the digestive tract and are converted into dangerous toxic poisons which clog the system, causing not only constipation but auto-intoxication, dyspepsia and hundreds of other sympathetic ills.

But, as Christian tells us, just as wrong food selections and combinations destroy our health and efficiency, so do right food combinations create and maintain bodily vigor and mental energy. Christian's own personal experience seems to confirm this most conclusively. Twenty years ago he was at death's door. For years he had suffered the agonies of acute stomach and intestinal trouble. His doctors, among them the most noted specialists in the country, gave him up to die. As a last resort, he commenced to study the food question, especially its relation to the human system, and as a result of what he learned, he succeeded in literally eating his way back to health without drugs or medicines of any kind, and in a remarkably short space of time.

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice, and whose cases he is unable to handle personally, that he has written a little course of lessons which contain the boiled-down experience of his twenty years of study and research. These lessons—there are 24 of them—contain actual menus for breakfast, luncheon, and dinner, curative as well as corrective, covering every condition of health and sickness, including constipation, acidity, fermentation, and many other sympathetic ills.

With these lessons at hand it is just as though you were in personal contact with the great food specialist, because every possible point is so thoroughly covered that you can scarcely think of a question which isn't answered. You can start eating the very things that will produce the increased physical and mental energy you are seeking the day you receive the lessons, and you will find that you secure results with the first meal.

If you would like to examine these 24 Little Lessons in Corrective Eating, simply write The Corrective Eating Society, Dept. 411, 460 Fourth Avenue, New York City. It is not necessary to enclose any money with your request. Merely ask them to send the lessons on five days' trial, with the understanding that you will either return them within that time or remit \$3.00, the small fee asked.

**Please clip out and mail the following form instead of writing a letter, as this is a copy of the blank adopted by the Society and will be honored at once.**

**CORRECTIVE EATING SOCIETY, Dept. 411, 460 Fourth Ave., New York City**

Gentlemen: You may send me prepaid a copy of *Corrective Eating in 24 Lessons*. I will either renew them to you within five days after receipt or send you \$3.00.

Name ..... Address .....

## What a farce to talk efficiency in the face of this!

You are due, right now as you read this, to get down to bedrock on this correspondence thing.

It is *finished* typewriting you pay for—not shorthand sessions that tie up the works and waste the time of the man who dictates, the girl who takes it and the *other* fellow who is waiting his turn to dictate. To say nothing of the dollars and cents you waste when you pay for non-productive work.

Of course, if you still want to have every letter written *twice*, once in shorthand and once on the typewriter; if you want your typewriter standing idle a couple of hours a day adding to overhead; if you still want to take your typists away from the work you pay them for; if you still object to saving at least a third on every letter you write—why, all right!

But if you want efficiency and economy and a personal convenience in dictation beyond anything you imagine possible, you need The Dictaphone.

Reach for your telephone and call The Dictaphone, and arrange for a demonstration on your own work. If you do not find that name in the book, write to

# THE DICTAPHONE

with scorn and cruelty. The Jewish civilian population were pillaged and worse. But for the timely presence of American warships, the plight of the Jews would seem to have been utterly hopeless. (Houghton, Mifflin, \$1.25.)

Under the title *Potsdam Princes*, Ethel Howard, for several years English governess to the Kaiser's sons, has written some reminiscences of her royal charges and her life at the German court. From the fascinating and unusual material at her disposal she has made an ill-constructed, only fairly interesting book. (Dutton, \$2.)

In a straightforward, day by day account of his flight *With Serbia Into Exile*, Fortier Jones makes very real the splendid courage, the horrible agony of that retreat. Some of his experiences seem incredible to us over here on "the safe side," but his sincerity is as convincing in his graphic descriptions as in his abundant facts. (Century, \$1.60.)

No finer record of volunteer service in the Great War has come to hand than that compiled in *Friends of France*, by members of the American Ambulance. How they worked, lived, and day by day went at the risk of their lives to rescue the French wounded from Ypres to the Alsace front, is simply told, each narrator giving all the credit to his comrades. (Houghton, Mifflin, \$2.)

The most complete and authoritative collection of the *Official Diplomatic Documents Relating to the Outbreak of the Great War* is that edited by Dr. Edmund von Mach. Besides a chronological arrangement of the papers this contains photographic reproductions of the original editions issued by the various governments. The brief notes are pro-German but show no objectionable partizanship. (Macmillan, \$6.)

### FRIVOLOUS AND GRAVE

*Pincus Hood*, by Arthur Hodges, is a story of impecunious artists and multimillionaires. It begins like a George Cohan play and ends like a third rate movie. (Small, Maynard, 40 cents.)

Elizabeth Jordan, in her recent volume, *Lovers' Knots*, tells some interesting short stories. This is easily the best work Miss Jordan has done since her volume "Tales of the City Room." (Harper & Bros., \$1.25.)

A graceful, quiet-toned, leisurely novel for those who love young lovers and the gentle small perfections of the out of doors, is L. H. Hammond's tale of country life in Tennessee, *In the Garden of Delight*. (T. Y. Crowell Co., \$1.)

*The Certain Hour*, by James Branch Cabell, is a collection of romantic tales about poets dead and gone, prefaced by a fatuous essay on literature, an "auctorial induction." Two poems, far from poetic, are included in the book. (Robert M. McBride, \$1.35.)

*An Average Woman*, by W. Dane Bank, all goes to prove that "there ain't no such animal." Whether you agree with the author or not, Emmie, who was a trimmer in a hat factory near Manchester until she married the owner, is well worth knowing. (Doran, \$1.35.)

*The Truffers*, by Samuel Merwin, is an entertaining romance, also a fair minded account of the truths and the truffles to be found in Greenwich Village. There, as elsewhere, are idealists and hypocrites, adventures magnificent and adventures tawdry. (The Bobbs-Merrill Co., \$1.25.)

*The Turtles of Tasman*, by Jack London, is a collection of short stories of assorted types and kinds—a literary remnant counter. The stories are written with what would be reasonable cleverness in the ordinary fiction writer but lack the verve and the authentic thrill of Mr. London's early work. (Macmillan, \$1.25.)

Peered Schofield, that inimitable synthesis of the tragic, comic and melodramatic moods of boyhood, returns in triumph

in Booth Tarkington's new volume, *Penrod and Sam*. Penrod's imagination is as riotously fertile as ever and labors as effectively to create practical problems for his parents and teachers. (Doubleday, Page, \$1.35.)

*The Raw Youth*, by Dostoevsky, is the eighth of his novels, now translated by Constance Garnett. Why the Russian in given circumstances acts so differently from even the most composite American will probably always be a puzzle and Dolgoruky and his whole unpleasant connection are more than commonly puzzling. For that very reason this is one of the novels to be recommended to the student of Russian life. (Macmillan, \$1.50.)

#### ALL SORTS OF JOBS

In *Fundamentals of Selling*, Norris A. Brisco considers salesmanship from the viewpoint of the large department store. He has evidently given the matter careful consideration; no important branch of the work is ignored, and the treatment is fairly exhaustive. (Appleton, \$1.50.)

Every amateur photographer will take delight in *The Camera Man*, by F. A. Collins, because of its abundant anecdotes of how press pictures and movies are taken under all sorts of difficult circumstances. The snapshots from aeroplanes are the most interesting of the illustrations. (Century, \$1.30.)

*Types of News Writing*, by Willard Grosvenor Bleyer, University of Wisconsin, is a storehouse of wise suggestion to students and young reporters. It shows the development of new stories by star reporters, and the novice will do well to study its patterns in style, both of writing and type. (Houghton, Mifflin, \$1.40.)

To any one owning or having connection with a retail establishment of any description, *Retail Selling*, by James W. Fisk, cannot be too highly recommended. It treats of retailing and retail salesmanship only, but it discusses all sides of these, from the selection of a location to the final organization of the sales force. (Harper, \$1.)

An admirable survey of the art of *The Binding of Books* is by Herbert P. Horne. The processes of forwarding and finishing are clearly set forth, and there are chapters on Italian, French and English bindings. The illustrations include a Grolier binding and examples of the work of Eve, Payne and Sanderson. (Dutton, \$1.25.)

In *Selling Things*, O. S. Marden considers the up-to-date salesman and his many qualifications. He discusses these qualifications in detail, and emphasizes the fact that, to be really successful, a salesman should have special training, as well as native ability. The book is in Dr. Marden's customary inspirational style. (Crowell, \$1.)

*The Truth About the Theatre* is the title of a little book by "one of the best known theatrical men in New York," who has had the theatrical business of New York—its tragedies, its uncertainties, its comic aspects. Some would be playwrights and would be actors will be disillusioned by this merciless recital. (Stewart, Kidd, \$1.)

*Training for the Newspaper Trade*, by Ben C. Seltz, business manager of the *New York World*, is an entertaining, informative and authoritative inside survey of the newspaper field. The youth who contemplates a journalistic career may well read this volume, charged with the intensive personality and wide experience of its author. (Pilladespina: Lippincott, \$1.25.)

In *Talks on Business Correspondence*, William Cushing Bambridge presents sound and stimulating rules—together with the comment of an experienced advertising man and letter writer. He stresses, and justly so, the value of dignity, terseness and simplicity. The chief weakness of the book is the absence of sample letters. (Boston: Little, Brown, \$1.)

## The Independent Investor's Service

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

## TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

## The Market Place

### INVESTIGATING PRICES

Owing to complaints that the prices of the necessities of life have been increased by trusts or trade conspiracies, the Department of Justice has ordered its representatives in all parts of the country to make a thoro investigation, promising to punish any who may be found guilty. Probably the inquiry will not be more fruitful in detecting unlawful conspiracies than was the one made some time ago by the Department concerning the price of wheat and flour. As a rule, the price advances are due to short crops, the great foreign war demand for many of our products, and wage increases that have added to the cost of manufacture. These causes, for example, account for the prices of flour, cotton goods, potatoes, meat, leather, shoes, and articles of steel, copper, or brass. Sales of wheat in Chicago at \$1.91 a bushel were reported last week, and cotton is 19½ cents a pound at New York. Conspiracies have not made these prices, nor are they responsible for the price of potatoes. The crop was only 288,000,000 bushels, or 72,000,000 less than last year's and the recent average. And the Allies are buying. If conspirators are found they should be punished. If the advances are not due to them, a plain official statement as to causes and conditions will serve the public interest.

### IN THE STOCK MARKET

On the New York Stock Exchange there was a broad and active market in the four full days of election week, transactions amounting to nearly 2,000,000 shares on Wednesday and Friday. In the preceding week, the prices of war order shares and other industrials had advanced, with the stimulus of the Steel Corporation's report of the September quarter's net earnings, but railroad stocks had shown little change. Steel common stock had closed at 120½. On Monday, the day before the election, when the prevailing expectation was that Mr. Hughes would be chosen, more than 1,500,000 shares changed hands, and fifty representative securities made an average net gain of a little more than half a point, Steel common rising to 123¼. On Wednesday, the day after election, when the result of the voting had not been ascertained, there were sharp fluctuations, and the average at the end indicated a slight loss, in a total of 1,979,500 shares. Steel advanced to

## Journalism As An Aid To History Teaching

By EDWIN E. SLOSSON, Ph.D.

Literary Editor of The Independent  
Associate in the School of Journalism  
Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 24, 1915, has been published in pamphlet form and will be furnished free to teachers. Write to The Independent, 119 West 40th St., New York.

126, but fell back to 124½. For the railroad stocks there were losses. In the curb market there was much betting on the result of the final election count, and the odds were still in favor of Mr. Hughes.

On Thursday, with the result still in doubt, altho there were indications that Mr. Wilson had been reelected, the movement was erratic, but with an upward tendency, and at the close a decided gain was seen. The argument or theory that avoidance of a change at Washington would prevent a check of prosperity had weight. To the prices of several war order stocks there were large additions, Central Leather showing an advance of 11 points on large earnings and news of a contract for several million dollars' worth of the company's products. More than one-quarter of the day's business was done in Steel shares, with a slight decline. On Friday, when the election of Mr. Wilson was generally admitted, there was notable activity (1,958,350 shares), with an irregular net result. The effect of political considerations could not be measured. Steel shares, which had been sold at 126 on Wednesday, closed at 123¼, altho the monthly report showed, for October 31, the great increase of 492,676 in the tonnage of unfilled orders. Copper mining companies' shares advanced because sales of the metal had been made at 32½ cents a pound and negotiations for the purchase of 225,000,000 pounds by the French Government were reported to be pending. A seat on the Exchange was sold for \$75,000, the profits of business in a broad market having caused an increase of the price of membership.

Among the published reports was one showing that the Hercules Powder Company's gross earnings in nine months, \$43,000,000 (an increase of \$35,000,000), made a surplus equal to 179 per cent on the common stock.

### THE RAILROADS

At Omaha, on the 8th, the Union Pacific Railroad Company attacked the new Adamson eight-hour law by asking the Federal Court there for an injunction to prevent enforcement of it. On the following day similar action was taken by the Atchison, Topeka & Santa Fé Company at Kansas City. The claim is that the law is unconstitutional. Appeal to the courts was delayed until after election day, in order that there might be no apparent ground for a charge that the companies had a political motive. It is understood that eastern companies will soon go to the courts in the same way.

Car shortage is the cause of much complaint, especially at the coal mines, and the Interstate Commerce Commission has begun an investigation at Louisville. One of the southern roads has published a statement showing that companies in the northeastern states have on their lines three times as many cars as they own, while southern companies are temporarily deprived of their property. All this is due mainly to the movement of war supplies to north-

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

**Going up?**

**-or down?**

**H**ERE is your future charted for you, based on the actual average earnings of trained and untrained men.

Which way will you go—up, through training, to a position that means good money, or down, through lack of training, into the ranks of the poorly paid?

It rests with you. And now is the time to decide. Not next year, nor next month, but now. You can get the training that will command a trained man's salary. The International Correspondence Schools have helped hundreds of thousands to qualify for advancement. Let them show you how you can prepare yourself, in your own home, for the position you want in the work you like best.

Just mark and mail this coupon. It will be the first step upward. Mark and mail today.

eastern ports. Companies say that while their earnings have increased they are not large enough—in view of the effect of the eight-hour law, soon to be operative—to permit large purchases of equipment. It is true, however, that in the last few weeks they have ordered a large number of cars. At the approaching session of Congress that part of President Wilson's program which provides for an inquiry as to the effect of the eight-hour law, with a possible increase of freight rates if this should be required, will probably be taken up.

The Joint Committee of the Senate and the House which is to make an investigation concerning the expediency or feasibility of government ownership of the railroads and telegraph lines, and to inquire about financial and other conditions in the railroad business, will begin its work on the 20th. It is required to report only fifty days later. Obviously the time allowed is not sufficient for an investigation covering so much ground and relating to questions of so much importance. The members of the committee will have other duties, and cannot give their attention exclusively to the inquiry.

#### STEEL AND COPPER

Steel prices are higher and there is much excitement in the pig iron market, where additions of \$3 or \$4 a ton were made last week, altho the supply is growing. The pig iron output in October made a new high record, rising to 3,508,849 tons. May's output, 3,361,073, had been the summit. To these great quantities has the monthly product moved upward from only 1,601,421 tons in January of last year. The addition, at the end of October, of nearly 500,000 tons to the quantity called for by the Steel Corporation's unfilled orders, made a total that for the first time exceeded 10,000,000 tons. It is predicted that a forthcoming report will show that the corporation's net earnings in October were not less than \$35,000,000. September's \$30,000,000 had never been equaled. Large orders have recently been given for delivery in the second half of 1917, and even in 1918. New contracts for 300,000 tons of shell steel, to be used in foreign munition factories, have been made, and it is expected that others will increase the quantity to 900,000 tons. The mills are unable to satisfy the demand for ship plates. Sales were made last week to Italy and Japan. Our railroads are ordering thousands of cars every week. There is evidence that the steel mills will have all the work they can do thru the year 1917, even if the war should end in the near future.

About two cents a pound has been added to the price of copper, for there have been sales at 32½ cents. Not long ago the British Government bought 448,000,000 pounds, and now France, according to trustworthy reports, is about to purchase 225,000,000 pounds. Mining companies are steadily increasing their outputs. The Utah Company's report shows 66,000,000 pounds for the year's third quarter, against 48,000,000 in the second.

# Insurance

Conducted by

W. E. UNDERWOOD

## THE ROYAL ARCANUM

Discussing our article devoted to the recent advance in rates made by the Royal Arcanum, one of our readers in Maine observes that there should be no hesitation by members of that order aged 45, if insurable, to make an immediate change to old line insurance. As one who has tried fraternal insurance, he advises me that he has abandoned it now. I quote from his letter, omitting only the identity of the old line company in which he has placed his insurance:

Age 45—Royal Arcanum "Regular rates" show a cost of \$1.55 per month, or \$22.60 per \$1000 (including \$4 annual dues) per year to the age of 65, or virtually a 20-year Term contract. The \_\_\_\_\_ Insurance Company 20-year Term contract can be bought at a lower price.

Age 45—Royal Arcanum "Whole Life, Table A" rates cost \$32.80 per \$1000, while \_\_\_\_\_ Insurance Company (using dividends to reduce premiums) on 10-year average can be bought for a lower price and, in addition, has a paid-up value, cash value, extended insurance value, which should enter into the comparison.

These conclusions are sound, based as they are on age 45, or younger. But what is the position of members of the Royal Arcanum of advanced age? I have before me a letter in which I learn that the writer has belonged to the order for nearly 40 years. "I was young when I joined," he says, "and did not know that these mutual organizations were for the most part humbugs. . . . I am now 67 years of age and the last assessment is a burden. What should I do?"

It is difficult to find a satisfactory answer to this question. Relief from the burden complained of, a burden which will doubtless increase every year, seems extremely remote. Even if my correspondent can meet the physical requirements exacted by old line companies, the premium rate at his age, including as it does the provision for a reserve, would be too heavy to render a change practicable. He would not now be in his present predicament had his assessments of 40 years ago and since included a few cents each for that same essential reserve element. On the contrary, he should have been paying at 67 a little less per month than he paid at 27. To sum up: it is my judgment, if he can pass a physical examination and can find a company which will write him a 10 or 15 year Term policy, at a rate per \$1000 per year approximating the present cost in the Royal Arcanum, he will do well; if he cannot qualify physically, or cannot secure a Term policy, and yet needs protection, he should remain in the Order.

## Hartford a rebuilder of cities

For over a century the Hartford Fire Insurance Company of Hartford, Conn., has helped to rebuild American cities destroyed by fire. Nineveh, Babylon and Carthage burned and were never rebuilt. Rome and London did not fully recover from conflagrations for years. When New York, Boston, Charleston, Chicago, San Francisco and other cities were swept by fire money paid out under Hartford policies helped property owners to rebuild quickly and well. But it is not alone fire losses that the Hartford makes good to property owners. Fire insurance is only one branch of the complete

## INSURANCE *Service* OF THE TWO HARTFORDS

The Hartford Fire Insurance Company and the Hartford Accident and Indemnity Company write practically every form of insurance except life insurance. For over a century Hartford losses have been fairly and promptly paid in ever-increasing amounts. Its growth has kept pace with the wonderful development of the country's trade and commerce.

Are you fully insured? Look over the list below and check the forms of insurance which interest you. Ask your agent or broker to get you a Hartford policy, or write to us and we will tell you the name and address of an agent who can give you rates and particulars.

## COMING EVENTS

Several interesting forthcoming events were discussed at a meeting of the Board of Governors of the National Institute of Efficiency, held at the Lawyers' Club, New York, on October 31st. Among these was the 19th annual session of the American Mining Congress, held at Chicago, November 13th-16th. One day was devoted to the discussion of efficiency, not only in the technical aspects of the industry, but also in the desire to solve the problems of mining along broad, inter-industrial lines, with national requirements in view. In response to an invitation to cooperate in the discussion, the Board of Governors of the Institute appointed the following members of the board as delegates to the congress: Admiral Robert E. Peary, Hon. Emerson McMillin, Dr. Henry S. Drinker and Mr. Henry C. Morris.

It was also reported that the government of the Commonwealth of Australia has appointed a commission, whose delegates will comprize six manufacturers and six workmen, with the view of studying efficiency methods in the United States. It is understood the commission will come direct to New York, and the board decided to offer the Institute's cooperation, if the program of the commission should make such cooperation feasible. The chairman of the committee on aeronautics, Mr. Henry Woodhouse, made announcement of the exhibition of the Pan-American Aeronautic Federation to be opened in New York on February 8th, and it was decided to make arrangements for the Institute to be suitably represented at the exhibition. The following members were appointed delegates to the annual meeting of the American Civic Association, to be held in Washington, December 13th, 14th and 15th: Dr. Henry S. Drinker, Admiral Robert E. Peary, Hon. Conrad H. Syme, Mr. Melvil Dewey and Mr. Henry Woodhouse.

## WHERE THE MONEY GOES

Detroit, through its Bureau of Government Research, is planning to make its municipal housekeeping efficient. The bureau is affiliated with the New York Bureau of Municipal Research, which is claimed to have effected a saving for New York taxpayers, by increasing departmental efficiency, of something like \$31,000,000 annually. In Detroit it is proposed to work along similar lines, making continuous surveys of departmental work and recommending such auditing, budget, purchasing and cost systems as will secure improved results. The bureau will have the cooperation of the University of Michigan, and will set itself the task of equipping the departmental heads with an exact daily record of the results within each department, whether it be parks supervision, fire protection, policing, street cleaning or restaurant

inspection. An enormous amount of work is involved in thus putting and keeping the municipal house in order, but commensurate results are looked for, not merely in economies but in securing a broad survey of the social value of the various expenditures.

## A GOOD EXAMPLE

The manager of one of the western offices of the Mutual Life Insurance Company of New York believes in efficiency. In a letter to the agents he says: "I would like to see every man in the force adopt some way of improving himself, of finding quicker and better ways and of using more modern and up-to-date methods. I believe it possible, under the right methods, for a solicitor to produce at least one application every week, and," he adds, "to any agent who produces one application for ten consecutive weeks I will give a year's membership in the National Institute of Efficiency, which includes at least four Monographs of Efficiency and a year's subscription to The Independent, which publishes monthly articles on efficiency. . . . I think the Institute a splendid development, and on the Board of Governors are some of the biggest men in America in their respective lines."

## SEEING HOW TO DO IT

Compared with instructions laid down in cold print, there is a sprightliness and fascination about the movie method that makes its future secure as an educational medium. There have been private showings this week in New York of the new household movie which Mrs. Christine Frederick has produced and to see the film is to be convinced not only of the great possibilities back of this new idea in efficiency education but also of the practical value of what Mrs. Frederick has already accomplished. Altho it occupies an hour, those present at the private view asked, like *Oliver Twist*, for more, and this seems likely to happen wherever the picture is shown. The reason is that from beginning to end the "plot" keeps close to the facts as they are to be found in thousands of American homes, and almost every scene is a visual answer to the questions asked by housewives who would be efficient. How an automatic ironer and an indoor dryer work; how a woman may scrub the floor without looking like a drudge; how cooking can be tackled without the once inevitable appearance of floury chaos in the kitchen; how to plan a meal so as to reduce step-taking to the minimum; how dishes may be washed "sitting down," how to arrange for a thief-proof delivery of

groceries and so on when the house has to be left—these are a very few of the finger-posts, showing the way to the new housekeeping, which the film embodies. Tho it is first of all for women the story should be of almost equal interest to the men who are fortunate enough to see it, for "Mr. Man" appears in the picture, just as he does in the domestic kingdom of three dimensions, and he is, of course, as directly concerned as the wife in rescuing the household from the commonplace tragedy of inefficiency. Already arrangements have been made with some of the leading educational institutions in the country for the use of the film, before it is released on the regular circuits.

## THE TWO KINDS

There are two kinds of efficiency, and one kind has brought the term into more or less disgrace. The development of the National Institute of Efficiency has made it clear that next to the promotion of real efficiency, there can scarcely be a better object than that of combating the kind that "leaves a man no longer a free agent," to use the recent phrase of a friendly critic. "If he takes the medicine that efficiency 'promotists' prescribe," our critic added, "he will become one of the common cogs of base metal in the world machine that has for its purpose the demanding of the last ounce of flesh for sacrifice at the feet of the god Mammon." There is some justification for this attitude, which is admittedly common to many people who are trying anxiously to read the signs of the times, toward the efficiency that begins and ends in a balance sheet. The National Institute aims at the efficiency that makes for individual and national betterment, and is not unmindful—again to quote our correspondent—"of the need of giving attention to the proper ethical basis of this big question."

## TELLING WHY

Of course, there must be some reason for particular "fashions" in women's clothes. Men mostly believe that it would be futile, and possibly unfriendly, to expect the wearers to supply a reason for skirts being short or long, and hats large or small, as the case may be. Yet it appears that there is some historical basis for what women are wearing today, and it is a general as well as a particular service, therefore, that one of the best known of New York stores is rendering in having Parisian experts give short afternoon talks to make clear the connection between by-gone centuries and the latest Broadway "creation." The *Directoire* period of France and some of this season's styles have to be taken together to be understood, it was hinted in one of the talks, which, at all events, reflect a versatility in salesmanship that makes for real efficiency.

THANKSGIVING IN 1630

The first Thanksgiving poem, written by an American colonist in 1630, celebrates the valiant determination of the Pilgrim Fathers to be thankful in spite of the absence of most things to be thankful for. Its title, uncompromisingly honest, is "New England's Annoyances."

New England's annoyances, you that would know them  
Pray ponder these verses which briefly doth shew them.

The Place where we live is a wilderness Wood,  
Where Grass is much wanting that's fruitful and good:  
Our Mountains and Hills and our Vallies below  
Being commonly covered with Ice and with Snow:  
And when the Northwest Wind with violence blows,  
Then every Man pulls his Cap over his Nose;  
But if any's so hardy and will it withstand  
He forfeits a Finger, a Foot or a Hand.

But when the Spring opens, we then take the Hoe  
And make the Ground ready to plant and to sow;  
Our Corn being planted and Seed being sown,  
The Worms destroy much before it is grown;  
And when it is growing, some spoil there is made  
By Birds and by Squirrels that pluck up the Blade;  
And when it is come to full Corn in the ear  
It is often destroyed by Racoons and by Deer.

And now do our Garments begin to grow thin,  
And Wool is much wanted to card and to spin;  
If we can get garments to cover without  
Our other In-Garments are Clout upon Clout;  
Our Clothes we brought with us are apt to be torn,  
They need to be Clouted soon after they're worn,  
But Clouting our Garments they hinder us  
Nothing;  
Clouts double are warmer than single whole clothing.

If fresh Meat be wanting, to fill up our Dish,  
We have Carrots and Turnips as much as we wish;  
And is there a mind for a delicate Dish,  
We repair to the Clam-banks and there we catch Fish,  
For Pottage and Puddings and Custards and Pies,  
Our Pumpkins and Parsnips are common supplies:  
We have Pumpkin at morning and Pumpkin at noon;  
If it was not for Pumpkin we should be undone.

If Barley be wanting to make into Malt  
We must be contented and think it no fault  
For we can make Liquor to sweeten our lips  
Of Pumpkin and Parsnips and Walnut-Tree Chips.

Now while some are going let others be coming,  
For while Liquor's boiling it must have a scumming.

But I will not blame them for Birds of a Feather,  
By seeking their Fellows are flocking together.  
But you whom the Lord intends hither to bring,  
Forsake not the Honey for fear of the Sting,  
But bring both a quiet and contented Mind,  
And all needful Blessings you surely will find.

THE NEW PLAYS

Old Lady 31. What happened in an old ladies' home when a man was taken in. A wholesome and delicious sunshine comedy. (Thirty-ninth Street Theater.)

Captain Kidd, Jr. Adventure of dear old bookseller and two young lovers in seeking a buried treasure in Cape Cod. Local color. Wholesome and amusing comedy. (Cohan and Harris Theater.)

Bushido, a ninth century Japanese tragedy, is the feature of the Washington Square Players' excellent new bill. In Another Way Out these Greenwich Villagers cleverly satirize themselves (Comedy Theater.)

That curious and beautiful Chinese play, The Yellow Jacket, presented by C. D. Coburn of the Coburn Players. For gorgeous costumes, grotesque conceptions and naïve conventions there is nothing to equal it. (Cort Theater.)

Tolstoy's play, The Living Corpse, has not been attempted by a Broadway producer, for it requires eleven stage settings, but Rudolf Christian has given it very ingeniously as Der Lebende Leichnam. (Irving Place Theater.)

REMARKABLE REMARKS

PROF. I. S. HOLBORN—Poetry is not for an idle hour.

FIELD MARSHAL FRENCH—The contest is approaching the climax.

KING CONSTANTINE—What has become of the rights of the little neutral nations?

ED. HOWE—I can point out instances where Ralph Waldo Emerson was ridiculous.

THEODORE ROOSEVELT—No amount of talk can induce me to speak of the 1920 nomination.

GROVER J. SHOHOLM—Major Higginson, with an aspect of benevolence, holds Harvard under his wing.

CONGRESSWOMAN-ELECT JEANETTE RANKIN—I positively refuse to allow myself to be photographed.

W. J. BRYAN—Wilson was the first President in many years who has been independent of Wall Street.

"BIG BILL" EDWARDS—A football victory to many men is as dearly longed for as any goal of ambition in life.

MRS. JULIAN HEATH—Our girls must realize that in married life something more than mere affection is needed.

FRANCIS J. HENEY—The West will continue to be the dominating influence until such time as the East adopts reform legislation.

VICE-PRESIDENT MARSHALL—Solomon worked his men eight hours a day and Solomon was a pretty wise man for his generation.

WOODROW WILSON—Again and again I have found men in Wall Street uneasy because the Treasury was being managed without their advice.

DR. CARY T. GRAYSON—I played golf with the President Wednesday with the news favoring Hughes and everybody excited. He played the best game I ever saw him play.

## No Theatre Party Tonight

When Billiards starts on the Brunswick Home Table all other engagements are off by mutual consent. Who wants to quit when luck is on his side—or if it's not, who doesn't thirst revenge? CAROM and POCKET BILLIARDS played among friends at home are winning both sexes, old and young. Often the tide of victory is turned, not by a skillful shot, *but a witty tongue!*

## BRUNSWICK HOME BILLIARD TABLES

*\$5 Brings One on 30 Days' Trial*

**W**HY seek expensive outside amusements when a Brunswick will make your home the center of social life?

Billiards costs nothing except for the table, and our plan lets you *play while you pay*. Complete Playing Outfit of balls, cues, etc., included without extra cost.

Decide *right now* to give your boys and girls this manly training that keeps them home and cultivates social graces.

## THE MORAL TRAGEDY OF GERMANY

**G**ERMANY'S latest atrocity shocks us, as the deportation of women and girls from Lille shocked us; as the executions of Captain Frye and Edith Cavell and the sinking of the "Lusitania" shocked us. But the shock should not be our only reaction. If there is nothing that we can *do*, we might try to *think* about German behavior intelligently. Let us experiment.

German inhumanity is premeditated and deliberate. This is not only the civilized world's view of it: it is Germany's own view of it. She has said so repeatedly, and she persistently declares her purpose, by word and deed, to make mankind understand that she intends to be ruthless in achieving her ends. Those ends, she proclaims, are above all other aims on earth, because she herself is superior to other peoples.

It has been said that Germany justifies her acts naïvely by the maxim that might makes right. That account of the matter is not accurate, and it is not illuminating. It does not explain. Germany justifies her acts as man justifies his extermination of vermin and his exploitation of domesticated brutes; not as the behavior of the stronger, but as the behavior of the better. Man ruthlessly takes the calf from its mother. Does he relent if the calf bleats and the old cow moans? Neither does Germany relent if the mothers of Lille wring hands in anguish when daughters are torn from their arms, or if Belgian wives die of heartbreak and want when husbands are dragged to slavery at Cæsar's chariot wheels.

There is a rectitude of egotism as there is a rectitude of justice and a rectitude of kindness. To the rectitude of egotism the Kaiser long since laid claim, and the German nation lays claim now. "I go my way," the monarch has said, and the German nation says, "We go our way." There is no infirmity of purpose, no turning aside, no waste of means, or of words. It is the morality of Thor and Wotan, in which there is no more place for "the fine

Italian hand" of diplomacy than there is for the Beatitudes. It is straightforward, stark and relentless.

In a way this morality is admirable, not so much because it is heroic, altho it is that, as because it is genuine. If the gentler moralities of civilization were also softer and less sincere, there would be more than a grudging word to say for Kultur. We do not doubt that millions of unimaginative Germans honestly enough believe that the morality of France and of England is insincere, and that the morality of America is both insincere and sentimental. Unhappily, however, unimaginativeness delivers its victims over to delusion, and nothing more surely kills imagination than the practise of ruthlessness. It dulls perception as it hardens the heart.

Germany, following her provincial philosophers, has given herself to ruthlessness, and is becoming daily more dull of apprehension. She wholly misapprehends and she underestimates the world beyond her own borders. Western civilization long ago learned that the morality of self-sufficiency can carry an individual or a nation only a little way. The supreme achievements are possible only to individuals and peoples that know the world and live on decent terms with it. Self-vaunting is a challenge, and sooner or later the challenge is met, if not in arms yet in ways and with forces that unfailingly bring the self-nominated lordling to terms, and show him his place. The Assyrian, the Mohammedan and the Hun, each in his day proclaimed superiority and the creed of ruthlessness. Each devastated, but each was destroyed. Germany, the most consistent egotist of history, stripping herself of all impedimenta of traditional scruple and international obligation, has challenged not only the military power but also the intelligence and the conscience of mankind. Generations will pass after this war is over, and works meet for repentance will be wrought in pain and sorrow, before she will again enjoy the perfect confidence of the civilized nations.

## COÖPERATION OR INTERVENTION

**T**HE American-Mexican Joint Commission has at last reached the critical stage of its deliberations.

For twelve weeks Secretary Franklin H. Lane, Dr. John R. Mott and Judge George Grey have spent on an average ten hours a day studying the Mexican problem from all conceivable angles and bringing to bear upon it every consideration of reason and justice. Seldom, we venture to say, has a great political problem been scrutinized with such painstaking care and such disinterested motive. It is safe to assume that no three citizens

of the United States are now better informed on conditions in Mexico than the American members of the Joint Commission. We feel sure, therefore, that what they recommend will not be ignored by President Wilson, even if it involves a reversal of the administration's Mexican policy.

From the beginning Carranza has tried to restrict the discussion of the Commission to three things: first, the withdrawal of the American troops from Mexican territory; second, the negotiation of a protocol covering fu-

ture border operations; third, an investigation into the interests behind the border raids.

The United States has insisted all along that the work of the Commission should be much broader in scope. The American members have stressed the prime necessity of the Commission taking measures not only to make life and property hereafter safe in Mexico, but also to make the de facto government more stable.

Last week the American commissioners, so it is reported, laid down their final proposals. If this is the case we may expect within a few days that either the de facto government will accept the American proposals or else the American Commission will be compelled to lay before President Wilson their plans for an independent course of action for the United States. It is therefore now up to Carranza to choose between a real solution of the Mexican problem and the breaking off of negotiations. If he selects the latter alternative it is difficult to see what remains but intervention.

The Mexican problem ought to be an easy one to settle. Mexico is in desperate need of aid in almost every department of her life. The United States is not only able but eager to render this aid. What more fitting thing than that Mexico should accept our assistance. If she could only be led to see it, the course that Japan followed as she rose to her commanding position among the nations of the earth suggests the road which Mexico should travel. But no; a compound of Spanish pride and Indian obstinacy will not permit her to accept anything from other nations. Indeed, the one cardinal element of the present revolutionary movement is the purpose to throw off the yoke of foreign influence and to make Mexico as independent as possible of foreign help, especially if such help carries any right or power to speak as to the conduct of Mexico's internal affairs.

Mexico evidently fears us as "Greeks bearing gifts." We understand that not once have the Mexican commissioners signified that they would entertain or welcome proposals of assistance by the United States such as helping Carranza to catch Villa, opening the mines, stamping out fever, settling the controversy between church and state, and establishing a system of popular education.

Why not, then, wash our hands of the whole affair, leave Carranza "to stew in his own juice," and withdraw the American troops across the border? This would at least save the tottering de facto government, which is the only one in sight that has the confidence of any considerable part of the Mexican people.

The difficulty with this solution is that it does not solve. Our 1500-odd miles of border cannot be effectively patrolled with our present forces, and if another Columbus raid should take place intervention would inevitably follow. And intervention means an occupation of Mexico of two to five years, a large army of invasion, an expenditure of \$1,000,000 a day, and an untold loss of both American and Mexican life. Intervention, moreover, would destroy our influence and prestige in Latin America for a generation at least.

This is the problem that confronts the American commissioners. If they solve it a new era of peace and prosperity will dawn in Mexico.

If they fail and are obliged to recommend intervention the American people may rest assured that no other course is possible.

## GERMANY JOINS

AND now Germany takes her stand. Said Chancellor von Bethmann Hollweg in his speech in the Reichstag:

"Germany is at all times ready to join a league of nations—yes, even to place herself at the head of such a league—to keep in check the disturbers of peace."

Who would have dreamed, when that little band of American citizens met at Independence Hall, Philadelphia, on June 15, 1915, and published their proposals for a League to Enforce Peace to the world, that within a few months their idea in substance would be publicly espoused by the President of the United States, the Premier of Great Britain, the Foreign Minister of France and the Chancellor of Germany? And who can now doubt but that Russia, Italy, Austria and Japan will soon fall in line?

With these eight great world powers bound together in a League to Enforce Peace, or even with six or seven of them, it would be safe to make the experiment. If the preponderating force of the world can only be put behind the judicial and legislative processes of a league, the day of universal peace is at hand.

## SIX DAYS SHALT THOU LABOR

IS it for the good of society that the workers in a steel mill should work six days a week?

This is the question which is now before the New York State Industrial Board in concrete form. The Lackawanna Steel Company operates a great steel plant just outside the city of Buffalo. A law of New York state provides that every employer of labor in the state shall allow every person employed by him at least twenty-four consecutive hours of rest every week. The law further provides, however, that if there shall be "practical difficulties or unnecessary hardship" involved in carrying out the provisions of the act to the letter, the Industrial Board is empowered to relax the rule to fit the case. The Lackawanna Company has applied to the board for permission to work its men seven days a week. The company's request is based on the following arguments:

- (1) The work of the plant is necessarily continuous;
- (2) Great hardship would be entailed to require the company to observe the strict letter of the statute;
- (3) None of the company's competitors (all of which are outside the state) observe the one-day's-rest-in-seven plan, either substantially or otherwise;
- (4) The operatives take the required time off, when and as they please;
- (5) There is no evidence whatever that the operatives wish the statute strictly enforced;
- (6) The scarcity of labor is such that it is impossible to hire sufficient men to comply strictly with the statute.

These arguments are plausible. If the business prosperity of the steel company, its ability to meet competition, its power to do all the work that is ready for it, its success in making profits, are the great ends to which all other considerations are to be subordinated, the company's arguments must be given serious attention and accorded great weight. But something more vital, more fundamental, lies beyond.

Business welfare is important. It is essential to the well-being of the community, the state, the nation, that business enterprises should prosper. But human welfare comes first. It is vital to the state and the nation that all the people should prosper.

This is the unalterable conviction of the twentieth century. It finds expression in all kinds of humanitarian legislation. It is the heart of the demand for social justice. It is pursued even at the expense of the time-honored concern of democracy for personal liberty.

In the pursuit of this conviction, men are becoming convinced of the truth of the proposition that it is not good for the workingman to work continuously. It is good neither for him, nor his family, nor society, nor the state. We shall some day become convinced that it is not good even for the business.

There is no escape from the fact that no man ought to work seven days a week. No one should be permitted to compel him to omit his one day of rest in seven. He should not even be permitted to dispense with it of his own free will. For more than his own desire and pleasure are at stake. The unenlightened workingman must be protected against himself.

The New York law is on the side of progress. It is unfortunate that other neighboring states have not followed New York's example in this matter. Under present competitive conditions this undoubtedly works hardship on New York enterprizes. But the loss which would inure to the whole community on the human side from any step backward even in a single state is too serious to be balanced against any private advantage. The Industrial Board has a very clear duty before it. The petition should be denied.

#### ABOVE THE BATTLE

LAST year the Swedish Academy held in reserve the Annual Nobel Prize for the greatest work of idealistic literature. Now it is definitely awarded to Romain Rolland and the prize for 1916 to Verner von Heidenstam. These awards are as nearly satisfactory as any could be in these troublous times. Tho little is known of the poet Heidenstam outside of Sweden, nothing is known against him, and the French novelist is one of the few writers belonging to the belligerent nations who have preserved the international mind.

Most of the other Nobel prizemen in literature are at sword points, or rather pen points. Rudyard Kipling is denouncing the Germans as fiercely as he used to denounce the Russians. Rudolf Eucken signed the manifesto issued by the German professors at the beginning of the war declaring that "It is not true" about a lot of things which have since been proved true. Henryk Sienkiewicz struggled for the reestablishment of Poland. Maurice Maeterlinck has written many bitter things about the invaders of his Belgium. Gerhardt Hauptmann, who a few months before the war wrote a play which ended with Germania leading the nations into the Temple of Peace, is now extolling Germania in war.

But Romain Rolland, loyal as he is to France and opposed as he is to German aggression, has yet maintained a mental balance that enables him to do justice even to his enemies. Before the war he had made it his duty to act as interpreter to France and Germany, and his great novel, "Jean-Christophe," contains admirable characterizations of national psychology. During the war he has been living in Switzerland, for the French resented his attempts to preserve a fair and unprejudiced attitude, and his recent writings have not been allowed to appear in France. But a collection of them was published last

year under the title of *Au-dessus de la Mêlée* and has been published in America as "Above the Battle." In it the reader will find words of condemnation of Germany, of pity for Belgium and of encouragement for France, but he will also find what is too often lacking in such connection, a recognition that there are in Germany many who deplore brutality and aggression as much as anybody, and who are trying to keep alive their feeling of kinship with the whole world. In his work on the international committee for the exchange of disabled non-combatants and for the interchange of letters between prisoners and their home folks he has the best of opportunities to learn the feeling on both sides.

Do not break down all the bridges, since it will ever be necessary to cross the river. Do not destroy the future. A good, open, clear wound will heal; but do not poison it. Let us be on our guard against hatred. If we prepare for war in peace according to the wisdom of nations, we should also prepare for peace in war.

This is what Romain Rolland is preaching. It made him an exile and subjected him to the scorn of belligerents of both sides; but neutral America may well join with neutral Sweden in honoring him for it.

#### SOCIALISM

NOW that neither the Republicans nor the Democrats have a working majority in the next House it is a pity that Meyer London is the only Socialist returned to Congress. Had Berger and Gaylord from Milwaukee, Debs from Terre Haute, and Hillquit from New York City been elected with him the country would have enjoyed the somewhat novel experience of having a party with a program of fundamental reconstruction holding the balance of power in the legislative halls of the nation.

The full program of socialism no one need expect to see inaugurated in this generation—tho the Great War has given it such an impetus as no one could have believed possible two years ago. But the party's unflinching support of international peace, of democracy in all its forms, and of the rights of women and children and generally of all who are oppressed, is beyond admiration.

Congress, the country and the world need more, not less, socialism.

#### SPEEDING UP ROMANCE

IF we compare the stories of the present with those of a generation ago we are struck with the acceleration of love-making. The modern courtship is no more like the old than the cannon-ball express is like the stage-coach. Almost every month a new speed record is established in some one of our popular magazines. As soon as the hero and heroine are introduced—and often without waiting for an introduction—they start off with a hop, skip and jump to page 47, where, concealed among the automobiles and phonographs, they hastily embrace and vanish. Sometimes it is an atavistic cave-man who, breaking down the barriers of society, carries off the super-refined young lady against her will but not against her inclination. More commonly, since feminine authors have taken to telling the tale—it is the heroine who takes the initiative and, tired of pursuing a policy of watchful waiting for thirty years, invests all her savings in a dress and a motor car and sallies forth on the highway, where she brings down an eligible party

within an hour and a half. But however they come together, we may be confident that before the day is over they will be hunting up the Little Church Around the Corner, where most of the fictional marrying is done.

The growing intimacy of slowly ripening friendship, the courtship and engagement period which many women and some men call the happiest days of their lives, all this, on which the older novelists delighted to dwell, is curtailed or eliminated altogether. The andante is deleted and the scherzo is played with tempo accelerando.

This speeding up process we may blame—as most things now are blamed—on the motion picture. Here a thousand feet of film has to carry the courtship from its inception to its presumably happy conclusion. The cinematograph waits for no man, no, nor woman neither. The medium of the romance is so thin, transparent and inflammable that if the ribbon halts an instant it goes up in smoke with a bang. The heroine who hesitates is lost, and we know when first she smiles upon us that she must fall into the arms of the hero at the end of fifteen minutes, or twelve and a half if the operator has a quick arm. The interposing of a still slide reading “And so their friendship grew as the long summer days flew by” between the handshake and the kiss does not alter the psychological effect.

Nowadays the page takes lessons from the screen and we see that the romance on celluloid has influenced the romance on cellulose.

It would not matter how fast such affairs went on the screen or the page, if it were not that life imitates art more than art imitates life. A fashionable portrait painter may alter the type of feminine beauty. A romancer may set a new mode in morals. Our young people

who get their ideas of social life chiefly from its shadow on the screen are likely to have trouble if they use the cinematograph as a pacemaker, especially in the making of permanent partnerships. Our girls are apt to get the notion that any young man who does not propose within a quarter of an hour after his introduction is too slow to bother with. Our young men need to be reminded that the cave-man is quite *passé* and that if they are at all particular whom they get for a wife, a summer afternoon is hardly long enough to gain a complete understanding of a woman's nature. If there is any truth in the old adage “marry in haste and repent at leisure,” Reno is likely to profit by this acceleration of romance.

### BIG BEN

THE announcement of the reelection of Ben B. Lindsey as judge of the juvenile court at Denver was read with interest and with pleasure by people in every state. Is there another county judge anywhere of whom that may be said?

The reason of it is that Ben Lindsey has shown himself to be more than a mere judge and the people are convinced that something more than legal machinery is desirable in dealing with the criminals. There are judges who are more lenient and judges who are more severe. Doubtless also judges who are more unvaryingly impartial in applying the law, for his enemies have seen to it that all the world knows of his idiosyncrasies. But what wins popular appreciation is the feeling that Judge Lindsey is more intent on preventing crime than punishing it, and that he tries to understand human nature as well as to understand law.

Enslaved “for their own good”

THE GERMAN DEPORTATION OF BELGIANS, PORTRAYED BY LOUIS RAEMAËKERS, THE MOST VIGOROUS OF DUTCH WAR-CARTOONISTS

# THE STORY OF THE WEEK

THE BATTLE OF THE ANCRE

By a sudden attack of the British launched on Monday, November 13, and followed up for four days the Germans were dislodged from the strong positions on both banks of Ancre Creek. By this offensive the British left was advanced nearly to Beaumont and the right to the Butte de Warlencourt, and they captured seven thousand prisoners

## British Victory on the Ancre

The British battlefield in France is in the angle formed by the river Somme and one of its tributaries, the river, or rather the creek, Ancre. Most of their fighting has been done to the east of the Ancre, but having recently ousted the Germans from the stronghold of Thiepval on the Ancre bluffs, they have now followed up this success by a drive along both sides of the stream.

A terrific onslaught which was started in the mist of Monday morning brought the British forward more than a mile and put them in possession of some of the strongest entrenchments constructed by the Germans. The labyrinth of St. Pierre Divion, north of Thiepval, was composed of tunnels and caves dug into the clay bank of the Ancre. The main gallery is 300 feet long, 8 feet high and 4 feet wide, neatly timbered on all sides. The chambers occupied by the officers and men were twenty feet underground, not only bomb proof, but sound proof, and provided with an electric lighting system. The British found in such caverns great stores of ammunition and food supplies as well as many machine guns which had been run in to shelter them from the fire of the enemy.

The Germans seem to have been too snug and comfortable in these quarters, for they were taken by surprise and the first line was taken without much difficulty. The British pushed their advantage energetically and in three days took over 7000 prisoners. On the left or western side of the Ancre Creek they took the villages of Beaumont, Beaumont and Hamel and advanced almost to Serre. On the right bank they got up to Grandcourt and the Butte de Warlencourt. The Germans recovered and counter attacked, but without regaining much of their lost ground.

## The Capture of Monastir

It is a puzzle to the distant observer why the Allied troops south of Bulgaria remained almost inactive while the Bulgars have ever since August been devoting all their efforts to the crushing of their northern neighbor, Rumania. The only reason alleged, that the Allies were afraid to advance northward lest they should be struck in the rear by Greece, is incompatible with the previous Allied reports as to the eagerness of the Greek people to be led against the Bulgars, and the completeness of the Allied control in Greece. It is no wonder that the King of Rumania cried out in despair when he saw help coming neither from the north nor from the south. Now, however, a vigorous movement has begun, and the left wing of the Allied army

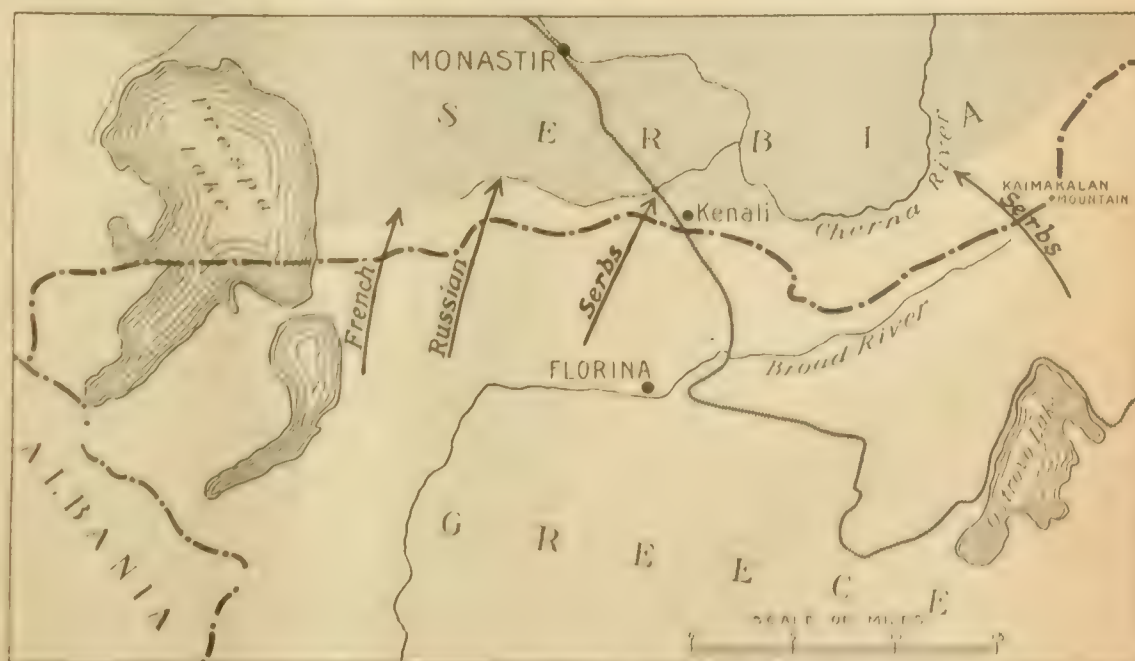

has effected an entrance into Serbia as far as Monastir, ten miles north of the Greek border.

Monastir was one of the Macedonian cities over which the Bulgars and Serbs quarreled in 1912. Bulgaria claimed it because it was chiefly populated by Bulgars. Serbia claimed it by right of conquest from the Turks. In the second Balkan war resulting from this disagreement Serbia and Greece were victorious, and so divided Macedonia between themselves, Greece taking Salonica and Kavala, to the east of it, and Serbia taking Monastir, to the west. To regain these Bulgaria entered the war on the side of the Central Powers and was thus enabled to get both cities. Now the British are trying to drive the Bulgars out of Kavala, and the French and Serbs have driven them out of Monastir.

The Russian contingent that was sent to Salonica, probably not a large one, coöperated with the French on the south of Monastir, while the Serbs approached it from the east. An Italian force, landing at Avlona, on the Adriatic, is said to have been sent across Albania to attack Monastir from the west, but it does not appear to have taken any active part in the fighting so far.

The French followed up the railroad which leads from Salonica to Monastir and there stops. They took Kenali, the first station on the railroad inside the Serbian border. This brought them within ten miles of Monastir, toward which they pushed their way in spite of the Bulgar fortifications.

The Serbs had a harder road to travel, for they had to force their way over the mountains which are on the Greco-Serbian border, and then to cross

THE CAPTURE OF MONASTIR

The campaign that was started two months ago by the Allies in Macedonia for the reconquest of Serbia has accomplished its first objective, the occupation of Monastir, the most important city in southern Serbia. The Serbs advanced upon it from the east across the Cherna River and the French and Russians from the south between the railroad and Lake Prespa. A month ago the Bulgars and Germans held the territory shaded in the above map. Now this is all in possession of the Allied forces.

the Cherna River, twenty miles east of Monastir. Both mountains and river were fortified and held with tenacity, but the Serbian infantry, with the aid of the French artillery, succeeded in overcoming these obstacles and descended upon the plain east of Monastir. The Franco-Serbian advance on Monastir began September 14, and at the end of two months the Allies could report the capture of 6000 Bulgars and Germans, as well as of 72 cannon and 53 machine guns. The next two days gave them some 2000 more prisoners. One reason for their success was that the Bulgar trenches were flooded with rain and melting snow.

The decisive battle was fought on the 18th with the French attacking from the south and the Serbs from the east. After the Serbs had gained the hills that formed Monastir's last defense the Germans and Bulgars evacuated the city and a French column entered at eight o'clock in the morning of November 19, the anniversary of the capture of the city from the Turks by the Serbs in 1912.

**The Invasion** In spite of a defense whose stubborn courage of Rumania their enemies acknowledge the Rumanians are being driven out of the passes in the mountain barrier that protects their country. Thru two of these, Vulcan Pass and Red Tower Pass, the Austro-German armies under General von Falkenhayn have now entered Rumania to a distance of nearly twenty miles. Thru Törzburg Pass they have gone ten miles into the interior which brings them half way to Campulung, the terminus of a railroad running to Bucharest. Tömös and Predeal passes, which lead most directly toward the capital, have been captured and the invaders are approaching Sinaia, the summer palace of the late King Carol. This, of course, has no military importance, but its occupation would be something of a blow to royal pride. This region, celebrated for the magnificence of its scenery, is well adapted for defense and if the Rumanians cannot hold its mountains and foothills they can hardly be expected to stand a pitched battle in the plains below. It appears that they are outclassed in the matter of artillery and the forces of Falkenhayn are able to make an advance as often as they can bring up their big guns into a new position. Almost every day the capture of 1500 or more Rumanian prisoners is reported from Berlin.

The attempts of the Russians to stop this advance toward Bucharest by a counter-invasion of Hungary thru the Carpathian Mountains south of Bukovina was apparently a failure. At least the Russians have been held in check on or near the boundary while a German attack upon the Russian lines in Galicia has prevented them from sending adequate reinforcements to Rumania. The other passes on the eastern side of the Carpathians are still held by the Rumanians with great tenacity.

Besides defending the mountain wall on the north and west the Rumanians

#### THE SERBS COME BACK

The Serbian soldiers of 1916, drilled and equipped, resemble the army of 1915 in only one respect, their indomitable courage. But they still depend on such primitive methods of transportation as this peasant cart.

now have to guard the whole length of the Danube on the south and east, a distance of over four hundred miles. At Orsova on the extreme west and at Chernavoda on the extreme east and at several points between the Bulgars have threatened to cross the river and altho these are probably merely feints they have to be met just the same.

Nothing has been heard during the week about the Chernavoda bridge which connects the Dobrudja with Rumania proper. Under pressure from the Rumanian and Russian armies under General Sakharoff the forces of Mackensen have retired from northern Dobrudja, burning the Rumanian villages as they went, if we may believe their enemy's report. With his limited force

it would have been a waste of effort for Mackensen to have tried to occupy northern Dobrudja. This country is largely barren and devoid of railroads so it would be unsuited as a base for the invasion of Rumania over the Danube. If Mackensen can hold the line of defense that he has now established stretching from the Danube to the Black Sea and about nine miles north of the railroad from Chernavoda to Constanza it will be sufficient for his purpose, and this he seems able to do. The report from Petrograd that the Rumanians had crossed the Danube in two places in his rear and that he had lost a third of his men appears to have been without foundation.

The German aeroplanes have been more active than usual of late notwithstanding the French avions who flew over Bulgaria to Bucharest from the isles of Greece. Bombs were dropped on many Rumanian cities including the capital. According to the Rumanian reports the German aviators flew low over the villages and fired their machine guns at the peaceable population. The royal palace in Bucharest was shelled altho it stands apart from the fortifications.

**The Deportation** M. Havenith, the Belgian Minister at Washington, has presented to our government a formal protest against the action of the German Government in forcibly transporting workmen to Germany. In contradiction to the German defense that the measure was necessary to relieve pauperism, the Belgian Legation states that the unemployment is due to the German Government, which has requisitioned all supplies of raw materials and removed the machinery from the industrial plants. Besides thus paralyzing Belgian business, the German Government has imposed a war tax of \$8,000,000 a month on Belgium for the last two years. This is about twenty times the normal taxation of Belgium in times of peace and prosperity.

The American Chargé d'Affaires at Berlin, Joseph C. Grew, acting in the absence of Ambassador Gerard, now in the United States, has presented the Belgian protest to the German Government in an informal and unofficial way and has called attention to the bad effect these deportations will have on public opinion in neutral countries. In making these representations the United States is acting independently and not conjointly with Spain, Holland and the Vatican, which, however, are likely to take similar action.

There are said to be 300,000 unemployed workmen in Belgium liable to deportation, and even if they are not set at military or munition work they would release for such work or for service under arms an equivalent number of Germans. From Poland it may be possible to raise an army of four or five hundred thousand men if compulsion is resorted to. It is proposed to apply the system of forced labor to all Germany, which would furnish a

#### LEADER OF THE VICTORIOUS SERBS

General Sarrail, in command of the Franco-Serbian army, has retaken the city of Monastir, now proclaimed the Serbian capital, and is pushing forward in the Vardar Valley.

further contingent for the armies. If all of these plans are carried out it would seem that Germany might secure an accretion of about a million more men for service next spring.

About 30,000 Belgians have already been deported since the order was issued. One locality is taken up at a time. The communal or municipal authorities are first required to present a list of all males over seventeen years. These are then summoned to appear before the military authorities on a certain day, and from them the unemployed and able-bodied, especially the skilled workmen, are picked out. They are then asked to sign a paper stating that they go voluntarily and are promised higher wages and better treatment if they do so. Those who refuse are at once loaded on railroad trucks under guard and sent off to an unknown destination, often without being allowed to get extra clothing or food.

The municipal council of Tournai refused to furnish the list of men demanded and General Hopffer imposed as a penalty for the refusal a fine of \$50,000, with \$5000 additional for each day that the council delayed in obeying the order.

**Under the German administration the Jews of Poland have received what the Russian Government has denied them, that is, full recognition as a religious body, with power to organize on a national scale and to control their own religious, social, charitable and educational affairs. Hitherto only parish organizations were permitted. Governor-General von Beseler has issued an order providing in detail for the constitution of local boards and higher administrative councils. The supreme council is to be composed of fourteen Jewish laymen and seven rabbis, of whom four laymen and two rabbis are to be appointed by the state. The others are elected by proportional representation. The Jewish communities constituted under this law will have the right to levy taxes, maintain schools, train rabbis and develop their own language and literature. But future rabbis will be required to have a knowledge of the Polish language.**

#### THE NEW AUSTRIAN AMBASSADOR

Count Adam Tarnowski was a secretary of the Austrian Embassy at Washington from 1899 to 1901 and has since then represented Austria-Hungary in Paris and in London. He is a member of the Polish aristocracy. Ambassador Tarnowski succeeds Ambassador Dumba, who was given his passports for "breach of international courtesy."

The Jews form fifteen per cent of the population of Russian Poland as a whole and a third or more of the population of some of the cities. The Russians of the Greek Orthodox faith form about ten per cent. The rest are mostly Poles of the Roman Catholic faith. The Poles have shown themselves as intolerant and oppressive toward the Jews as the Russians have been and the Jews who have fled from Polish persecutions to this country have been divided on the question of independent Poland.

**The Mishap of the "Deutschland"** On the morning of November 17 the German submersible merchantman "Deutschland" left New London, Conn., with a cargo of nickel, rubber, silver and official mail. The tug "T. A. Scott, Jr.," escorted it out of the harbor under cover of early morning darkness. The swirling tide twisted the tug around so that it came into the path of the submarine and the latter continued in its course, unable to see the impending danger. The "Deutschland" rammed its escort with such force as to break its side and sink it at once. Five persons on board the tug lost their lives as a result of the collision, including Captain John Gurney. The "Deutschland" did not continue on its course, but put back into harbor at once and was again at the pier before daybreak. Altho the tug suffered most from the accident, the "Deutschland" was badly crippled and will not be able to put to sea again for several days. Many rivets of the forward plates of the "Deutschland" were sheared off by the force of the blow, but the engines and the general framework seem to be uninjured, thus testifying to the excellent construction of the submarine.

The return trip of the German submersible will be delayed not only by the necessity for repairs, but to meet the damage suit instituted by the T. A. Scott Company, owners of the lost tug. Individual suits will also be brought by relatives of the men who were killed in the collision. Various charges of negligence on the part of Captain Koenig and his crew are brought forward in the suit of the T. A. Scott

#### THE COMMISSION TO INVESTIGATE THE EIGHT-HOUR LAW

While the railroads of the United States are filing suits to contest the legality of the Adamson eight-hour law, and the Federal Department of Justice is making its plans to defend it, the commission appointed by President Wilson, Mr. Edward E. Clark, Major-Gen. George W. Goethals (chairman) and Mr. George Rublee, is finding out and discussing the salient facts in the case

Company, which demands payment of the full value of the tug, estimated at \$12,000. The most important witness in the case is Captain Hinsch, of the Eastern Forwarding Company, the sole survivor of those on board the "T. A. Scott, Jr.," but he is still suffering from shock and unable to make a statement.

**The New Railroad Crisis** As everybody knew—but tried to forget—the Adamson bill establishing a standard eight-hour day in the railroad services did not end the railroad crisis but only postponed it until after election. The menace of the future is twofold. In the first place, the Adamson law was only an installment of the legislation desired by President Wilson, and the coming session of Congress will have to consider the advisability of granting rate increases to the railroad companies and provisions for compulsory arbitration. The rate increase is certain to be resisted by the shippers and compulsory arbitration by the railroad brotherhoods, but if the railroad companies do not get the relief of these laws they will undoubtedly do everything they can to upset the Adamson law. Already, and in this lies the second possibility of a renewed crisis, a number of companies have filed suits in the federal courts aiming to test the constitutionality of the law. If the courts rule in their favor the railroad brotherhoods will in all probability carry out their threat of a general strike. The Union Pacific filed suit in the Federal Court at Omaha on November 8, and its example was soon followed by the Chicago & Eastern Illinois, the Chicago Great Western, the Chicago, Burlington & Quincy, the New York Central, the New Haven, the Lackawanna, the Illinois Central and the Baltimore & Ohio. It is very probable that most of the important railroad companies throughout the country will commence action either to have the new eight-hour day

set aside entirely or to secure temporary injunctions that will postpone the actual operation of the new system until its details can be adjusted between the employers and the railroad men.

The railroad brotherhoods have warned the public that if the Adamson law is not in operation on the first of January the four hundred thousand railroad unionists organized in the four great brotherhoods would at once leave their work. Behind these formidable forces is the entire strength of the American Federation of Labor which President Samuel Gompers has pledged to the support of the eight-hour day for railroad men. The employers have also been seeking for allies. The National Founders' Association adopted a resolution approving of the determination of the railroad companies to carry their cause into the courts. This association and eleven other big industrial associations have organized a National Industrial Conference Board to champion the common interests of employers. This organization is said to represent an invested capital of eight billion dollars.

The thirty-sixth annual conference of

the American Federation of Labor opened at Baltimore on November 13. Much of the attention of the meeting was devoted to the railroad situation, but many other topics were discussed. The Secretary of Labor, William Wilson, delivered the opening address, and Samuel Gompers praised the legislative record of the Democratic administration. The Federation favored participation of representatives of labor in the peace conference at the end of the Great War, and advocated international arbitration and mediation backed by the economic and military forces of the nations.

**Peace and the Americas** The underlying idea of the League to Enforce Peace, which in this country has received the endorsement of the President and both ex-Presidents, and in Europe the approval of leading statesmen of England, France and Germany, was never more clearly stated or urgently advocated than in a recent speech of Sir Robert Borden, Prime Minister of Canada. At a luncheon given in his honor by the Lawyers' Club in New York City on November 19 he spoke in the name of Canada as follows:

As international relations become more intimate and more complex there is the greater need that public right shall be more accurately and authoritatively defined, and that as between the nations it shall be enforced by sanctions corresponding to those which within the state put down, by the power of the national organization, every violation of laws established for its orderly government. Let us at once admit that there has been no substantial progress toward a worldwide organization thru which the violence of a powerful nation, spurning all international tribunals and acting in despite of public right, may be effectually restrained and punished.

As the establishment and enforcement of laws within an organized civilized community depend in the final analysis upon the will of the people and upon public opinion within that community, so the enforcement of public rights thru organization of the nations prepared in advance must also depend upon the public opinion

Kirby in New York World

HIS HAPPY HOME COMING

of the world. Upon the advance and development of that opinion must rest the hopes of those who look for a world tribunal backed when necessary by a world-wide force for the restraint of an outlaw nation.

Premier Borden explained the purposes and ideals of the Canadian people in relation to the Great War, declared that the Australians at Gallipoli and the Canadians at Ypres were fighting for their liberties as truly as if they were fighting on their own soil, and made a significant plea for closer imperial federation in saying that the burden of so tremendous a responsibility as the British command of the sea "must not rest upon Britain alone but upon the greater commonwealth which comprizes all the King's do-

minions." The Lawyers' Club conferred an honorary life membership upon their distinguished guest, and a number of prominent citizens of this country, Major General Wood, Senator-elect William Calder, Controller Prendergast of New York City and others, spoke in high praise of the Canadians, their friendliness to the United States and the courage and devotion which they have shown in the present war.

While official Canada is thus giving her moral support to the American idea of an organized world peace, Latin America is thinking in similar terms. The Brazilian Society of International Law has just made public its proposals to the Brazilian Parliament. These plans contemplate a league of all present neutrals to uphold neutral rights against belligerent violations, and the spontaneous formation of a league of all neutrals upon any occasion of war hereafter. Violations of international law would be punished by the withdrawal on the part of all the nations in the neutral league of all trade rights and similar privileges enjoyed by the offending nation. A league of neutrals to safeguard their mutual interests has been frequently proposed during the course of this war; the novelty of the Brazilian idea is in extending the idea to the future.

**The Mexican Deadlock** After some six years of civil war the troubles of Mexico appear to be as far from solution as ever. What is of even greater concern to this country is that the danger that the United States may be compelled to undertake the costly and bloody task of effective intervention is as great today as it has been at any time since the fall of the Diaz government. President Wilson, after the pursuit of Villa had been halted by the un-

friendly attitude of the de facto government, which would really have been the chief beneficiary if Villa had been captured by the Americans, arranged for a joint conference of American and Mexican delegates to secure the safety of the border after the withdrawal of our punitive expedition from Mexican soil. Thus far the commissioners have failed to find a basis of agreement. A tentative plan is said to have received the approval of the three American commissioners and Ignacio Bonillas and Alberto Pani for the Mexicans. Luis Cabrera, the chairman of the Mexican delegation, has not, however, agreed to the terms approved by his colleagues.

THE THINKER (After Rodin)

# THE POET CHESTERTON

BY EDWIN E. SLOSSON

PROSE and poetry are such widely sundered fields that a reputation made in one does not carry over into the other. When Scott dropt poetry to take up novel writing he found it expedient to leave his name behind. When Kipling passed in the reverse direction from prose to poetry he had to cultivate a new *clientèle*. It is very amusing to hear two lovers of Hardy or of Meredith sing peans of praise to their favorite author, in strophe and anti-strophe until on descending from the general to the particular they discover that one was extolling the poet and the other the novelist and that each had never read, or but lightly esteemed what the other most admired.

So while the essays and romances of Gilbert Keith Chesterton reach thousands of readers week by week thru the journals, and are bought with avidity in volume form, his poems are but little known to readers of his prose altho they have, I fancy, a circle of their own. Yet no one can understand Chesterton fully who ignores his verse, for his thought, exprest thru this medium, is seen from another angle and so gains solidity to the view.

Chesterton, like Tennyson, has taken one of England's legendary heroes as the theme of an epic by which to express his philosophy of life and his message to his age. The stories of Alfred he accepts as uncritically and handles as freely as Tennyson did those of Arthur, but the poems resultant show not merely the difference between the authors, but also, in a way, the difference between the past century and the present one, the contrast between a faintly hopeful agnosticism and a robustious affirmation of faith.

In his "Alarms and Discursions" he has told us in prose of the impressions made upon him by his visit to the Vale of the White Horse and Ethandune. These he transmutes into poetry in "The Ballad of the White Horse."<sup>1</sup> In the beautiful dedication to his wife he gives her credit for having opened his eyes to the Christian significance of the wars of Alfred against the Danes. Miss Frances Blogg, whom he married in 1900, was described by one who knew her then as "a conservative rebel against the conventions of the unconventional." We may assume that it was largely thru her influence that he was converted from youthful atheism to extreme orthodoxy. I can quote only a few stanzas from this dedication altho such fragments are distressing to those who know the whole and aggravating to those who do not.

Do you remember when we went  
Under a dragon moon,  
And amid volcanic tints of night  
Waked where they fought the unknown  
fight  
And saw black trees on the battle hight,  
Black thorn on Ethandune?  
And I thought "I will go with you,  
As man with God has gone,  
And wander with a wandering star,

*This is the tenth article of a series entitled "Twelve Major Prophets of Today." The first six articles, dealing with Maurice Maeterlinck, Henri Bergson, Henri Poincaré, Elie Metchnikoff, Wilhelm Ostwald and Ernst Haeckel, have been republished in book form by Little, Brown & Co., Boston. Of the second group of these studies of contemporary thinkers, the following have appeared in The Independent: Rudolf Eucken (Feb. 17, 1913), H. G. Wells (Nov. 20, 1913), Bernard Shaw (April 20, 1916). A sketch of F. C. S. Schiller, "A British Pragmatist," and of John Dewey, "Teacher of Teachers," will complete the series.—THE EDITOR.*

The wandering heart of things that are,  
The fiery cross of love and war  
That like your self goes on."

O go you onward, where you are  
Shall honor and laughter be,  
Past purpled forest and pearled foam,  
God's winged pavilion free to roam,  
Your face, that is a wandering home,  
A flying home to me.

Up thru an empty house of stars  
Being what heart you are,  
Up the inhuman steeps of space  
As on a staircase go in grace,  
Carrying the firelight on your face  
Beyond the loneliest star.

IT is hard to carry the ballad meter thru a whole volume without its growing monotonous. Chesterton's poetry, like his prose, should be taken in small doses. "The Ballad of the White Horse" contains some wearisome stretches, particularly in the most exciting parts, the fights. When I want real zest in blood-letting and the enjoyment of hand to hand combat I should turn to Percy's reliques, or to Homer. My volume opens easiest, as it has opened oftenest, at three passages. The first is that where King Alfred as a fugitive in the forest is set to mind the cakes and gets to musing, not as we children used to be told about how to beat the Danes, but according to the Chestertonian version, about the Christian view of the labor question. As the old, bent woman leaves the hut Alfred wonders what shall become of such as she.

For God is a great servant  
And rose before the day,  
From some primordial slumber torn;  
But all things living later born  
Sleep on, and rise after the morn,  
And the Lord has gone away.

On things half sprung from sleeping,  
All steepy suns have shone;  
They stretch stiff arms, the yawning trees,  
The beasts blink upon hands and knees,  
Man is awake and does and sees—  
But Heaven has done and gone.

But some see God like Guthrum  
Crowned, with a great beard curled,  
But I see God like a good giant,  
That, laboring, lifts the world.

Wherefore was God in Golgotha,  
Slain as a serf is slain;

And hate He had of prince and peer,  
And love He had and made good cheer  
Of them that, like this woman here,  
Go powerfully in pain.

But whether Alfred pondered problems of war or labor, the cakes got burned just the same.

Next I turn to the page where men come to Alfred on the island of Athelney and beg him to become the ruler of all England. This gives Chesterton a chance to expound his anti-imperialism.

And Alfred in the orchard,  
Among apples green and red,  
With the little book in his bosom,  
Looked at green leaves and said:

"When all philosophies shall fail,  
This word alone shall fit;  
That a sage feels too small for life,  
And a fool too large for it.

"Asia and all imperial plains  
Are all too little for a fool:  
But for one man whose eyes can see,  
The little island of Athelney  
Is too large a land to rule.

"An island like a little book,  
Full of a hundred tales,  
Like the gilt page the good monks pen  
That is all smaller than a wren,  
Yet hath high towers, meteors and men,  
And suns and spouting whales."

As his men clear the weeds from the White Horse that had ages before been cut upon the chalk bluff, Alfred has a vision of the day when the ancient symbol shall be again overgrown and forgotten, and when a new and less manly kind of heathen than the Danes shall overrun England:

By terror and the cruel tales  
Of curse in bone and kin,  
By weird and weakness winning,  
Accurst from the beginning,  
By detail of the sinning,  
And denial of the sin:

By thought a crawling ruin,  
By life a leaping mire,  
By a broken heart in the breast of the world,  
And the end of the world's desire:

By God and man dishonored,  
By death and life made vain,  
Know ye the old barbarian,  
The barbarian come again.

When is great talk of trend and tide,  
And wisdom and destiny,  
Hail that undying heathen  
That is sadder than the sea.

In his specification of "the marks of the Beast" we may recognize Chesterton's antipathies; materialism, commercialism, Darwinism, imperialism, cosmopolitanism, pacifism and socialism. He is haunted by the same nightmare as Samuel Butler, that the day may come when machines will master the world and men be merely their slaves. For relief he looks to a revolution like the French Revolution, only worse. Chesterton is like the Eton boys who, after a debate over woman suffrage, passed a unanimous resolution disapproving of the aim of the suffragets but approving of their methods. The Socialists say, we must have a revolution, peaceful if possible. Chesterton would say, "we must have a revolution, bloody if possible." The guillo-

THE KNIGHT ERRANT OF ORTHODOXY

tine, he says somewhere, had many sins to answer for but, at least, there was nothing evolutionary about it. And he makes the English people say:

It may be we shall rise the last as Frenchmen  
rose the first,  
Our wrath come after Russia's wrath and  
our wrath be the worst.

Like Hilaire Belloc and other Neo-Catholics, he manages somehow to combine an admiration for the French Revolution with a devotion to Catholicism. They are ardent advocates of democracy notwithstanding the very explicit condemnations of popular government by the Popes. They are more inclined toward syndicalism than socialism and place their hopes in the peasant proprietorship instead of in the nationalized trust. It is an interesting novelty in the labor problem, for it cuts across the old classifications and I hope it will have a chance to develop into something concrete. The similar movement in France, the *Sillon* of Marc Sangnier, was crushed out by a papal encyclical in 1912. Chesterton might be called an English Sillonist, and in a literal sense if we recall his essay on *The Furrows* in "Alarms and Discursions." Chesterton, however, is not in danger of excommunication by the Pope, for he is a Catholic in the Anglican, not the Roman, sense of the word.

WHEN the rest of the world was looking for the advent of cosmopolitanism and the reign of peace, the earth lapt in universal law and all the local idiosyncrasies ironed out, wherein all obstacles to freedom of movement had been crushed out and one could buy a tourist ticket to Timbuktu with the same accommodation all along the route, Chesterton set his bugle to his lips and blew a fanfare of audacious challenge to the spirit of the times in the form of a nonsensical romance, "The Napoleon of Notting Hill." In this he carries particularism to an extreme, breaking up London again into warring wards, each with its own banner and livery, its gilds and folk ways. The book is inscribed, as we might expect, to his friend, Hilaire Belloc, and I quote part of the dedication as it sums up its message of the volume and is strangely prophetic:

Yea, Heaven is everywhere at home,  
The big blue cap that always fits,  
And so it is (be calm: they come  
To goal at last, my wandering wits).  
So it is with the heroic thing  
This shall not end for the world's end,  
And tho' the sullen engines swing,  
Be you not much afraid, my friend.

This did not end by Nelson's urn  
Where an immortal England sits—  
Nor where your tall young men in turn  
Drank death like wine at Austerlitz.  
And when the pedants bade us mark  
What cold mechanic happenings  
Must come; our souls said in the dark,  
"Belike; but there are likelier things."

Likelier across these flats afar,  
These sulky levels smooth and free,  
The drums shall crash a waltz of war  
And Death shall dance with Liberty!  
Likelier the barricades shall flare  
Slaughter below and smoke above,  
And death and hate and hell declare  
That men have found a thing to love?

Remember this was written in 1904, at a time when it was commonly thought that the last of the wars had been fought and the nations might disarm, for henceforth the Hague Court would hold sway; when the Socialists were becoming opportunists and the anarchists had laid aside their bombs; when such scientists as Metchnikoff were saying that self-sacrifice and heroism of the fighting sort were antiquated virtues for which the peaceful and sanitary world of the future would have little use. Chesterton was wrong about the nature of the catastrophe. He was looking and, I fear, hoping for a social revolution and that has not yet come altho it seems now less improbable than it did then.

But the Great War has given an irresistible impulse to the movement toward particularism as against cosmopolitanism. Whether we like it or not we must admit that the tide has turned in the other direction and that it will be many years, perhaps more than one generation, before there will be the freedom of trade, intercourse and migration that prevailed at the beginning of the twentieth century. Even England has abandoned free trade and every country will hereafter strive to secure economic independence by developing its own resources. Even before the war there was a tendency toward the sort of local differentiation of which Chesterton gave a fantastic forecast in "The Napoleon of Notting Hill." This tendency manifested itself in a variety of ways; in the cultivation of local industries, the revival of folk dances and historic costumes, in pageantry and community celebrations, in the interest in town history and in the struggle to reestablish disappearing languages, like Gaelic, Czech and Ruthenian.

From Chesterton's latest book devoted to the crimes of Germany, and characteristically entitled "The Crimes of England,"<sup>3</sup> we can see that it is the primitive little peasant kingdom of Montenegro that he most admires and the machine-like efficiency of the German Empire that he most abhors. Montenegro since he wrote this volume has been overwhelmed by the tide of war, but probably Chesterton has faith to believe that it will reappear like Ararat when the waters subside. This faith he exprest in the poem, "The March of the Black Mountain," written during the Balkan war which Montenegro initiated by a single handed attack upon the Turk:

But men shall remember the Mountain,  
Tho' it fall down like a tree,  
They shall see the sign of the Mountain  
Faith cast into the sea;  
Tho' the crooked swords overcome it  
And the Crooked Moon ride free,  
When the Mountain comes to Mahomet  
It has more life than he.

Chesterton has a better right to appear now as the champion of small nationalities than some other English authors we could name, for he first entered the lists of public life to break a lance in defense of the Boers at a time when it was most unpopular if not dangerous to say a word in their favor. He

refers to these youthful days in his "Song of Defeat," published some ten years afterward. I quote part of one stanza:

I dream of the days when work was  
scrappy,  
And rare in our pockets the mark of  
the mint:  
When we were angry and poor and happy,  
And proud of seeing our names in print.  
For so they conquered and so we scattered,  
When the Devil rode and his dogs smelt  
gold,  
And the peace of a harmless folk was  
shattered,  
When I was twenty and odd years old.  
When mongrel men that the market classes,  
Had slimy hands on England's rod  
And sword in hand upon Afric's passes  
Her last Republic cried to God!"

ONE of his youthful dreams was to see a reunion of the United States and England, which he imagined would come about in some great foreign war. But by 1905, when he included the poem on "The Anglo-Saxon Alliance" in a volume,<sup>5</sup> he had lost faith in such ethnic generalities as the Anglo-Saxon race, so he explains in his preface:

I have come to see that our hopes of brotherhood with America are the same in kind as our hopes of brotherhood with any other of the great independent nations of Christendom. And a very small study of history was sufficient to show me that the American nation, which is a hundred years old, is at least fifty years older than the Anglo-Saxon race.

But the poem, both because he wrote it and because he repudiated it, has an especial interest now when American sympathy with England is stronger than ever before and the traditional hostility has been largely swept away, altho the political alliance for which Chesterton once hoped seems no more probable.

This is the weird of a world-old folk,  
That not till the last link breaks  
Not till the night is blackest,  
The blood of Hengist wakes.  
When the sun is black in heaven,  
The moon as blood above,  
And the earth is full of hatred,  
This people tells its love.

In change, eclipse and peril,  
Under the whole world's scorn,  
By blood and death and darkness  
The Saxon peace is sworn;  
That all our fruit be gathered,  
And all our race take hands,  
And the sea be a Saxon river  
That runs thru Saxon lands.

\* \* \* \* \*  
Deep grows the hate of kindred,  
Its roots take hold on hell;  
No peace or praise can heal it,  
But a stranger heals it well.  
Seas shall be red as sunsets,  
And kings' bones float as foam,  
And heaven be dark with vultures,  
The night our son comes home.

In some respects we should expect Chesterton to go better in verse than in prose. He thinks in metaphors and pictures, vivid, fantastic and colorful. The peculiarities of his prose style that grate upon the taste of some readers, such as the repetition of the same words, the alliteration, the unqualified assertion of half truths, the queer rhythms, the verbal tricks, and the superabundance of tropes, are by tradition permissible in poetry and so arouse no resentment.

On the other hand, poetry is a pains-

taking art and Chesterton does not like to take pains. He is too indolent or too indifferent to hunt for the best possible word at rhyme. Consequently we find in his verse many a perfect line, rarely a perfect stanza and never a perfect poem. But scattered all thru his verse, even in the most nonsensical, we happen upon curious cadences that linger in the memory like the chant of some strange ritual. His ballads abound in unconventional rhythms that haunt one like those of Lanier's "Ballad of the Trees and the Master."

Altho Chesterton often seems to disregard the canons of versification from carelessness or caprice, yet at other times he takes delight in subjecting himself to the most rigid of models, as, for instance, the old French ballade, which, he says, is "the easiest because it is the most restricted." He shows us how he constructs one in "The Ballade of a Strange Town."<sup>6</sup> The strange town into which he was shunted by accident of taking the wrong tramcar one rainy day while "fooling about Flanders" was Lierre, an unknown and uninteresting way stations then, but now one of the famous places of world history, for it stood for days the shock of the German attack on Antwerp. While waiting for the next car to take them away Chesterton scribbled on the back of an envelope with an aniline pencil a poem which begins in nonsense but ends with as good an expression of his creed as he has given anywhere:

Happy is he and more than wise  
Who sees with wondering eyes and clean  
This world thru all the gray disguise  
Of sleep and custom in between.  
Yes: we may pass the heavenly screen,  
But shall we know when we are there?  
Who know not what these dead stones  
mean,  
The lovely city of Lierre.

CHESTERTON is so fond of the ballade that I must quote one specimen complete. For the benefit of those who have taken no interest in versification I may call attention to the technical difficulties of the form of the ballade that he has chosen. It consists of three octaves and a quatrain all ending in the same refrain and using only two rimes. The first rime is used in the first and third lines of the first quatrain and in the second and fourth of the second quatrain. The second rime is used in the second and fourth lines of the first quatrain and in the first and third of the second quatrain. The terminal quatrain or *l'envoi* is in the ballade addressed to a prince or other royal personage. Since Chesterton hates princes his apostrophe to the prince in this ballade is not in the usual sycophantic style.

#### A BALLADE OF SUICIDE

The gallows in my garden, people say,  
Is new and neat and adequately tall.  
I tie the noose on in a knowing way  
As one that knots his necktie for a ball;  
But just as all the neighbors on the wall  
Are drawing a long breath to shout  
"Hurray!"  
The strangest whim has seized me . . .  
After all  
I think I will not hang myself today.  
Tomorrow is the time I get my pay—  
My uncle's sword is hanging in the hall—

I see a little cloud all pink and grey—  
Perhaps the rector's mother will not call—  
I fancy that I heard from Mr. Gall  
That mushrooms could be cooked another way—  
I never read the works of Juvenal—  
I think I will not hang myself today.

The world will have another washing day;  
The decadents decay; the pedants pall;  
And H. G. Wells has found that children play.  
And Bernard Shaw discovered that they squall;  
Rationalists are growing rational—  
And thru thick woods one finds a stream astray,  
So secret that the very sky seems small—  
I think I will not hang myself today.

#### L'ENVOI.

Prince, I can hear the trumpet of Germinal,  
The tumbrils toiling up the terrible way;  
Even today your royal head may fall—  
I think I will not hang myself today.

According to Mendelism new species are most apt to come from the crossing of diverse forms. We should then naturally expect Chesterton's verse to be original since it is the result of a cross between Whitman and Swinburne. At any rate these were the poets who most influenced Chesterton when in his teens he began to write poetry. In philosophy of life Whitman and Swinburne were not so far apart since they were both pagans and democrats, but in form they are antipodes. Whitman was the father or the grandfather of the *vers-libriste*. He cultivated the unconventional and introduced the most unpoetic and uncouth words. Swinburne, on the other hand, sought his themes in the classics and sacrificed anything to the music of his lines.

The early poetry of Chesterton shows traces of both influences. One very interesting instance of this is found in a poem that he wrote at school, when he was about sixteen. It is an Ave Maria in the Swinburnian meter. That is, he has borrowed the weapon of the atheist and used it in defense of Catholicism—a trick that he has been playing ever since. The poem begins:

Hail Mary! Thou blest among women;  
Generations shall rise up to greet,  
After ages of wrangle and dogma, I come  
With a prayer to thy feet.  
Where Gabriel's red plumes are a wind in  
The lanes of thy lilies at eve  
We pray, who have done with the churches;  
We worship, who may not believe.

From his twelfth to his seventeenth year he went to St. Paul's school, where, as he says:

I did no work but wrote a lot of bad poetry which fortunately perished with the almost equally bad exercises. I got a prize for one of these poems—Golly, what a bad poem it was!

The prize was known as the Milton Prize and the subject assigned to the pupils competing for it was St. Francis Xavier. A soliloquy of Danton on the scaffold, written at the age of sixteen, shows how early began his fascination for the French Revolution. His fondness for discussion was cultivated at the St. Paul's school in the Junior Debating Club, of which he was chairman, and the monthly periodical of the society, "The Debater," contains many essays and poems signed "G. K. C." His first contribution to the outside press was a

socialist poem appearing in *The Clarion*, but a few years later he was busy trying to puncture the balloon of socialism with his sharp-pointed pen.

WHEN ex-President Roosevelt, on his return from Africa, was given a dinner by the journalists of London, he was asked by the committee on arrangements whom he would like to have placed by his side to talk with during the meal and he promptly chose Chesterton. I was of much the same mind when I went to England, but not being in a position to summon him to my side I sought him out in his home, Overroads. This is a little way out of London near the town of Beaconsfield, from which Disraeli took his title, uncomfortable quarters, I should say, for Chesterton, considering his antipathy for Disraeli and his race.

Arriving at Beaconsfield by the tea-time train I walked up the hill to where I saw a big man sitting on the little porch of a little house. He impressed me as Sunday impressed Symes. I do not mean Billy Sunday, but quite a different personage, the Sunday of "The Man Who Was Thursday." Great men are apt to shrink when you get too close to them. Mr. Chesterton did not. He was too big to fit his environment. The house was what we should call a bungalow; I don't know what they call it in England. It was on a little triangular lot set with trees half his height and a rustic arbor patiently awaiting vines. Afterward I saw in the paper that Mr. Chesterton broke a leg on that arbor. I suppose he must have tripped over it like a croquet wicket.

Mr. Chesterton has a big head covered with curly locks, two of them gray. He is gifted with a Taft-like smile and talks in a deep-toned, wheezy voice, punctuating his remarks with an engaging chuckle. It is no trouble to interview him. I never met a man who talked more easily or more interestingly. "There are no uninteresting subjects," he says, "there are only uninterested persons." Start any idea you please as unexpectedly as a rabbit from its lair and he will after it in a second and follow all its turns and windings until he runs it down. His mind is as agile as a movie actor. Epigrams, paradoxes, puns, anecdotes, characterizations, metaphors fell from his lips in such profusion that I, who knew the market value of such verbal gems, felt as nervous as a jeweler who sees a lady break her necklace. I wanted him to stop while I got down on my knees and picked them up. But he did not mind wasting clever things on me, for there were so many more where those came from. Besides they were not so completely lost as I feared. I recognized some of them a few weeks later in his *causerie* page of *The Illustrated London News*.

# A CITY MOTHER

BY ZOE HARTMAN

CONGRATULATIONS, Madam Mayor!"

It was a veritable chorus of good will that greeted Mrs. Estelle Lawton Lindsey, the lone "city mother" among the "city fathers" of Los Angeles, when for a day and a half she occupied the mayor's chair during his absence at the late Panama Exposition. Among her army of callers offering congratulations were not only her colleagues of the council, who had chosen her as mayor *pro tem*, but also many doubting Thomases of the old régime who looked cautiously in to satisfy themselves that the city hall had not collapsed under the shock of housing a woman mayor—the first ever known in an American city of metropolitan size.

To Mrs. Lindsey herself, however, these brief mayoral honors were only an incident in her busy official routine. The signing of a few public documents was a lesser responsibility compared with her manifold duties as commissioner of public welfare in the council—an office which requires her supervision of the parks, playgrounds, library, city planning, art, humane, animal and moving picture censorship departments.

As for the doubting Thomases and other reactionaries who from the first have stood around ready to pounce upon any act of hers at which they might point a finger of ridicule, Mrs. Lindsey has been entirely too busy making good as a commissioner to bother about them. Every Wednesday afternoon, which is her day for holding open house to the public, a stream of callers, mostly women, passes thru her private office at the city hall, each pausing to discuss some phase of the city's business. Often she addresses their clubs and Parent-Teacher Associations, thus gaining the loyal support she needs in the council chamber when she makes a "big drive" on behalf of some public welfare measure. To her genius in educating and mobilizing public opinion is due much of the excellent legislation for which she is responsible after a year's service in office.

One of the hardest battles she waged was in support of her anti-roller-towel ordinance. If it had been an ordinance to poison the city water supply, the opposition could scarcely have been more clamorous. Backed by the owners of large office buildings, holders of laundry stock and banks handling the business of laundries, to say nothing of a section of the press representing large money interests, they did their best to prove the roller towel a beneficent, not to say cruelly misunder-

*As Commissioner of Public Welfare in Los Angeles Mrs. Estelle Lawton Lindsey supervises playgrounds, parks and city planning; censors movies, art museum and public library; and even understudies the mayor. This sketch of her work has some stimulating suggestions for women who are active in civic affairs or who would like to be.—THE EDITOR.*

stood, institution. The combined chorus of opposition bitterly bewailed the vagaries of women in government and the "freak" legislation which sprang therefrom. They invoked the aid of some confident young lawyers who, in the presence of the council, challenged the germ theory and dared anyone to prove that the roller towel disseminates disease.

Councilwoman Lindsey replied to this by sending an S. O. S. call to the Los Angeles County Medical Association, which gave her its enthusiastic backing, as did the Woman's Club. She summoned physicians and oculists before the council to testify that the roller towel was dangerous to life and especially to eyesight. Finally, she brought into the council chamber some apparently clean towels which she spread out

invitingly before the enemies of the ordinance.

"These innocent-looking towels, gentlemen," she said, "have been infected with typhoid germs and several virulent kinds of boils. Step up, gentlemen, you who don't believe in germs, and wipe your faces on them!"

There was almost a riot among the gentlemen who "didn't believe in germs" in their efforts to get out of the immediate neighborhood of those towels. With the staging of this little comedy, the opposition practically collapsed.

Conspicuous among Mrs. Lindsey's good works is the \$19,000 municipal farm, a ten-acre tract beautifully located at the foot of Elysian Park, and purchased by the city last July as a training school for women misdemeanants from the police court. Here they are taught gardening, poultry-farming and the like and every chance is given them to develop character and ability to earn an honest living. The plan was adopted largely because of pressure from the church and club women, who were taught to demand it by Mrs. Lindsey herself in her speeches and writings prior to her election, during a four years' journalistic career on a Los Angeles daily. Similarly she created public sentiment favoring her Los Lomas home for partially self-supporting women who thru ill-health or misfortune are unable to earn enough for their needs. Another institution she has mothered is the recently established municipal home for girls on probation from the local courts. She was also active in securing the appointment of two women deputies to devote their time to cases of offences against women and children, one in the office of the city prosecutor and the other in the office of the district attorney. So effective is the work of these deputies that both city prosecutor and district attorney are wondering how they ever worried along without the aid of able women.

Those who prophesy evil for women in public office will find Mrs. Lindsey's career thoroly disheartening as a horrible example. Contrary to popular tradition that "men will never accept women in public life," her colleagues of the council, by her own testimony have from the first treated her as if she were "the only sister of eight big brothers." Also contrary to popular tradition, she has the temerity to live as happily as the heroine of a domestic romance, in a charming bungalow set on a hill, with a view and a flower-garden and a library and a husband who is proud of her public activities.

# LITTLE WINTER TRAVELS

THE POSSIBILITIES OF VACATION AMERICA IN THE WINTERTIME, FROM THE EXHILARATING OUTDOOR SPORTS OF THE NORTH WOODS TO THE COLORFUL CHARM OF THE TROPICS

## AMERICA'S WINTER GARDEN

There is no particular distinction in calling a place paradise. The angel with the flaming sword who kept people out of Eden has been replaced by the publicity man with a flaming pen inviting people into Eden, and Eden has been stretched so thin by real estate and railroad litterateurs that it is no wonder that you still find, now and then, somebody who is skeptical about California.

But California is like Kipling's man of infinite resource and sagacity. If you don't like one thing about it, there is always something else. Take the climate, for instance. Southern California comes pretty near perfection in its beautifully adjusted balance between cold and heat. Warm sun, cool breezes; warm days, cool nights; a caress in the air when there isn't a tingle. That ought to satisfy most people.

But if it doesn't, if the climate bores you, you can go sightseeing. And sightseers, as everybody knows, are weather-proof. You can see quainter, more intrinsically beautiful, more thoroly un-

familiar historic buildings in California than almost anywhere else in the United States. You can pace the brown tiles of mission courtyards generations old in years and centuries old in spirit. You can soak yourself in the spirit of a civilization which lingers in a thousand graceful memories and yet is utterly foreign to our own.

But if you loathe relics, and love hotels, and bathing beaches, and dansants, and all that, you have still a riot of opportunity. The bluest water and the softest air, the most lavishly beautiful garden homes, hotels that have all the conveniences and luxuries of the East and a setting that is hardly to be matched outside of California, are all waiting to charm you with a gaiety which flourishes indoors and out with equal facility.

But perhaps you don't want to be amused; you just want to see how they do things and what sort of people they are who cast the deciding ballot for Wilson. California is a capital place to see how people do things because they do so much. It is an adventure in Amer-

icanism to visit Los Angeles, to talk with the boosters of San Diego, to listen to merchants and college boys and ministers who are charged with initiative. California is reeking with originality and push; and you will feel the contagion if you go there.

After all, tho, a holiday is a holiday and a vacation is—or ought to be—a rest. If you want to do nothing but vegetate, California is still the place for that. If the human mind has ever devised a pleasanter place to rest in than a California patio we have yet to see it. Sunlight and shade, soft colors of tile and 'dobe, brilliant patches of flowers and greenery, the seclusion of the house and the sociability of the garden, all in one—loaf there and your soul will not wait to be invited.

**SAN FRANCISCO.** California's largest city. Trips which should be taken are those to Mt. Tamalpais and the Muir Woods (one day, cost \$2.90) to Oakland and Berkeley (cost \$1). Trip around the city includes Seal Rocks, Golden Gate Park, Mission Dolores (cost \$1). Hotels from \$1 up, European plan.

**DEL MONTE.** An ideal region located

LOAF THERE—AND YOUR SOUL WILL NOT WAIT TO BE INVITED

© Underwood & Underwood

#### SKIING—KNEES BENT, ARMS BALANCING, BLOOD RACING, NERVES A-TINGLE

in a park of 125 acres, having the broad Pacific on one side, the Bay of Monterey on the other. Interesting on account of the old adobe buildings and early missions. Plenty of out of door sport. Hotels \$4 up day, American plan.

**SANTA BARBARA.** A charming city with a unique setting resembling that of Mentone, France. The principal points of interest are the Old Mission, the best known in the country, the mountain drive and the drive to Miramar, which passes thru the beautiful residential section. One can play golf or tennis or indulge in boating or bathing. Hotels \$3 up day, American plan.

**LOS ANGELES.** The chief attraction of the "City of the Angels" lies in its beautiful homes. Many lovely trips can be taken from here, among them: Trip to the Beaches (one day), cost \$1. To the West Coast Beaches and Cities (one day), cost \$1. Old Mission Trolley Trip (one day), cost \$1. Trip to Mount Lowe (one day), cost \$2. Empire Trolley Trip to Riverside and Redlands (one day), cost \$3.50. Hotels \$1 up day, European plan.

**SAN DIEGO.** Points of interest are the Old Mission, seven miles from the city, reached by sight-seeing auto; Old Town, reached via trolley; La Jolla, reached by electric train; Point Loma and Spanish lighthouse, reached by sight-seeing auto, and the Exposition grounds. Hotels \$1 up day, European plan. Rate to all points the same. Cost from New York \$146.30 round trip, nine months' ticket. Cost from Boston \$82.85 one way. Cost from Chicago \$60.85 one way.

#### LAND OF WINTER SPORT

When "the north wind do blow, and we shall have snow," as the nursery rhyme hath it, it used to be the inevitable fashion to go South. Those who could afford it ran away from winter, even if it was but for a short while. There is a newer fashion, that grows more popular year by year. It is to run to meet the winter and play with it on its own ground. They have long done it abroad. We have been a little slow to take it up; but once begun, we are

likely, as usual, to make a fad of it. But it is infinitely more sensible than most of our fads.

Winter in the North Woods and the White Mountains is a season of exhilaration, of health, of joyousness. It is cold with good, honest, steady cold that braces and invigorates and does not chill and make miserable. There is continual incitement to activity, for exercise keeps you warm better than furs; and almost too many kinds of activity waiting close at hand. The list is pleasantly long—skating, sleighing, hockey, skiing, curling, snowshoeing, coasting, skijoring, tobogganing. They are all red-blooded sports that stretch the muscles, speed the blood, and tense the nerves. In so doing they relax the mind and smooth out the mental knots and wrinkles. The best kind of rest is change of occupation, when the new occupation is not only different, but worth while in itself.

A year ago a writer in *The Independent* set forth the joys of one of the white season's most characteristic sports. He writes of skiing thus: "Dozens of figures dot the slope below us, some sliding swiftly down, more toiling slowly up. It does not look so hard; it does look fun. We hesitate a moment on the brink, try to absorb the counsel of a volunteer friend, and take the plunge. We start, the motion quickens, down we go, knees bent, arms balancing, blood racing, nerves a-tingle. What sport this is; it's flying like the birds. Why have we never skied before? This is the sport for us. Must we ever stop?"

"Ah, now we know. What happened to those ski? Well, anyhow, the snow is soft; it did not hurt a bit to fall. But getting up's another story. How long the things are; how slippery the snow.

But easy, crafty does it. Now for the climb. That's good, hard work, but the prospect of another swoop, once we have reached the summit, lightens it. Well, here we are again; this time we'll keep the old things parallel, so they won't trip us. All ready? now we're off again; that's splendid. We've got it now. What speed. What thrilling rush! Let's top that little ridge and turn into that little gully there beyond. It's easy now. Why do those others fall; they haven't caught the knack. There, here's the ridge; now for the other side. Oof! Down again! Well, up again, wary and slow; we'll get it next time.

"So goes the sport. Now a little encouragement, now dire disaster. But the result is always the same. Have we done well this time; it's so splendid we must do it again forthwith. Has ignominy caught us by the leg? Better luck—or better skill—next time; let's up and at it once again. What? Time for supper? Impossible. Still we're hungry enough; but tomorrow bright and early will find us out again."

Now skiing is only a single sport on the long list. Lots of others are just as good; even better—if you happen to like them better. If you have never tried a winter sport holiday you have something to live for.

**LAKE PLACID, New York.** Here one can skate, play hockey, sleigh ride, ski, toboggan, and, in fact, enjoy every sort of winter sport. Hotels from \$2.50 up day, American plan. Reached from New York by rail direct. Cost \$15.35, round trip excursion. From Boston by rail via Albany. Cost \$9.62 one way. From Chicago by rail via Buffalo and Utica. Cost \$20.55 one way.

**ELIZABETHTOWN, New York.** The Inn rates are from \$3 up day, American plan. Skating, sleighing, skiing and coasting may be enjoyed. Reached from

**YOU** will be a subscriber to or buyer of *The Countryside* before the end of 1917 because you are a reader of *The Independent*, and will therefore appreciate what *The Countryside* will become and accomplish. Since that is so, why not sit down TODAY and send the Yes Blank attached to this page—either with a dollar pinned to it, or without, if more convenient to you. The December number of *The Countryside*—the first under the charge of *The Independent*—will appear this week. You will like it when you see it—and the other six numbers which your dollar will secure for you will be still more interesting. The Christmas Number contains the following features:

**Miss Margaret Woodrow Wilson**, daughter of the President of the United States, writes about "Using the Schoolhouse," an article describing a popular and growing movement in which she is keenly interested and very active.

**George Madden Martin**, the creator of *Emmy Lou*, tells how necessary it is to really love the country if you are going to live in it.

**W. H. Truesdale**, president of the Lackwanna Railroad, tells how he seeks rest from railroad-ing in the country.

**Books for Collectors of Old and Beautiful Things.** A list of new and standard books on collecting with short comprehensive descriptions of each.

**The Country Chronicle**, by Grant Showerman. An extended review, with extracts and a reproduction of the frontispiece, of the book of the month for lovers of the real country.

**William Haynes**, author of *Sandhill Sketches*, *Casco Bay Yarns*, *Scottish and Irish Terriers*, gives some practical suggestions for keeping your dog healthy during the cold weather.

**Mrs. Leslie Hall**, who abandoned newspaper work and poultry for dogs, contributes a page of dog pictures which explains why she made the change.

**Rev. Harry Emerson Fosdick**, of Union Theological Seminary, and a widely known "man's preacher," writes on "The Countryside Church."

**Mary Sargent Potter**, daughter of Professor Sargent, of the Arnold Arboretum, gives a delightful picture of Holm Lea, her childhood home at Brookline, with a hitherto unpublished portrait of her famous father. Her own portrait and a picture of Holm Lea in dog-wood time, accompany the article.

**Charles Dexter Allen**, author of *American Bookplates*, *Ex Libris Essays of a Collector*, etc., gives a delightful Talk on Textiles, illustrated with photographs of unusual, but easily obtainable materials, particularly adapted to home decoration.

**Arthur Tomalin**, former editor of *The Countryside*, gives good advice on The Work for December in garden, greenhouse and poultry yard. There is a surprising amount of garden work to do in the winter.

**Hudson Maxim**, an advocate equally of country living and of national preparedness, tells why

he located his laboratory at Lake Hopatcong, N. J.

**Joyce Kilmer**, associated with the N. Y. Times Review of Books, author of *Summer Love*, *Trees and Other Poems*, explains why, if you like the city, you ought to live in the country.

**Harold Howland**, associate editor of *The Independent* and formerly contributing editor of *The Countryside*, writes on "The Flavor of the Countryside"—an interpretation and an appreciation that will please every country dweller.

**Churchill Ripley**, one of the best informed experts on rugs in the country, writes on "Flower-Strewn Fields of Persian Rugs," with pictures of half a dozen exquisite creations from the looms of the Far East.

**Mary H. Northend** contributes plans and pictures of a charming Dutch Colonial house which you can build for \$8000.

**Jack London**, author of *The Call of the Wild*, *The Valley of the Moon* and many other books whose names you know well, describes the work he is doing on his California farm.

**For the Holiday Guestroom and Gifts for the House**, electrical and otherwise, two pages of pictures and descriptions of articles which you can order through the Countryside Shop, throw a bright light on the Christmas gift problem.

**Edna Dean Proctor**, author of some stirring Civil War poems and a frequent contributor to *The Independent*, tells how the true country lover finds endless sources of cheer, even in the mere sun and wind.

**J. Horace McFarland**, president of the American Civic Association, presents for the first time a picture of a magnificent new rose, which has been produced by Mr. John Cook and has not yet been named, with an announcement of two or more articles on Better Roses for American Rose Lovers.

**George W. Cable**, author of *Old Creole Days*, and many other southern books, describes the charms of life in Northampton, Massachusetts, a small town which combines the advantages of city and country.

**John Chapman Hilder**, motor editor of *The Independent* and until recently editor of *Motor Life*, makes, in *A Twelve-Cylinder Christmas*, many new and interesting suggestions as to Christmas presents for your motorist friends.

**Niagara Falls Illuminated** is the frontispiece. It is one of the first published photographs of the Falls at night taken since the new illuminating plant was installed by the City of Niagara Falls and the Commissioners of the State Reservation.

**Paul Bransom** has drawn the cover, a gorgeous Color Note from the Tropics.

**Kathleen Norris**, the author of *Mother*, *Saturday's Child*, *The Heart of Rachel*, etc., describes her gossipy, neighborly, domestic life at Port Washington, L. I.

**Stewart Edward White**, author of *The Blazed Trail*, *The Mountains*, *The Forest*, *The Rediscovered Country*, *The Gray Dawn*, etc., writes of his love for fresh air and dogs.

**Harriet Sisson Gillespie** describes *A House on the Hudson* with a Fine Pedigree, Mrs. H. H. Oltman's five-acre estate at Palisades, N. Y., of which Aymar Embury II was the architect. There are plans and picturesque photographs of the house indoors and out.

**Gutzon Borglum**, sculptor of "The Mares of Diomedes," the Newark Lincoln, the Sheridan monument and many other works, tells how he finds rest and inspiration in his country home.

**Christmas and Good Husbandrie**, verses from Thomas Tusser's *The Hundredth Pointes of Good Husbandrie*, published in 1557, illustrated with woodcut drawings by Herbert Roth.

**F. F. Rockwell**, author of *Gardening Indoors and Under Glass*, *The Home Vegetable Garden* and numerous other gardening books, tells about Keeping Your Christmas Plants, not just through the holidays but far into the spring.

**Walter Prichard Eaton**, one of the best known preachers of

the outdoors, author of *The Idyl of Twin Fires*, *The Bird House Man*, etc., discusses the country as the test of a man.

**John Burroughs**, the Grand Old Man of the countryside, tells of his life at Esopus, and why he does not live within city walls.

**Norman Harsell**, well known to Countryside readers, writes of Cold Comfort, how to picnic in winter—and enjoy it.

**E. I. Farrington**, former editor of *Suburban Life*, author of *The Home Poultry Book*, etc., asks How Are the Hens? and tells you how to keep them happy and laying all winter.

**Max Eastman**, Editor of *The Masses*, contributes a poem on *The City*, where, he declares, he feels himself an alien.

**Josephine Daskam Bacon**, author of *The Imp and the Angel*, *The Madness of Philip* and any number of other popular stories, tells how the difficulties of country living are driving her to desperation.

**Harold D. Eberlein and Abbott McClure**, experts on old furniture and joint authors of *Architecture of Colonial America* and *The Practical Book of Period Furniture*, have written an article on Mahogany, treating its history, the finishing of good pieces and how to care for them. This is to be followed by similar articles on other woods.

**Herman Hagedorn**, writer of plays and pageants, author of *The Heart of Youth*, *The Makers of Madness*, warns country lovers of the cost of country living under present conditions.

**May Irwin**, beloved of theatergoers, tells how the faces of her blooded cattle lure her away from the stage every year.

**E. F. Bigelow**, naturalist, writer and lecturer, tells how to find the key which will open the country door.

## YES BLANK for THE COUNTRYSIDE

119 West 40th St., New York

I either enclose or will shortly send

**ONE DOLLAR**

for which please forward the Christmas Number of *The Countryside*, with the Christmas Card, and the Six Monthly Issues beginning with January, 1917.

**Homes Like This Are Equipped With CHAMBERLIN**

The cold winds and heavy snows hold no terrors for the man whose home is equipped with the Chamberlin Metal Weather Strip.

It is on the bleakest days of winter that the Chamberlin proves itself a wonderful saver of fuel. Moreover it keeps a home evenly heated, and prevents draughts. Then in the summer Chamberlin excludes dust, rain and outside noises, and at all times makes easy the operation of your windows.

**STUDY THE PICTURE**

in the little circles, then write for detailed description of Chamberlin. We'll also give you a list of your neighbors who have their homes equipped with Chamberlin Metal Weather Strip.

Chamberlin is applied to windows, doors, casement windows, transoms and French windows, in new or old homes.

Architects will always approve of Chamberlin, "The Standard for 25 Years."

**Chamberlin Metal Weather Strip Co.**  
Main Office:  
119 Dinan Bldg., Detroit, Michigan  
Branch Offices in Principal Cities of the United States

**Your Biggest Heating Season Is Still Ahead Of You**

Reached from New York via rail direct. Cost \$7.06 one way. From Boston via Springfield. Cost \$4.05 one way. From Chicago via Buffalo, Albany, Springfield. Cost \$23.93 one way.

### THE SUNNIEST SOUTH

"The fountain of youth," "the land of perpetual sunshine," "the white sands of the Florida coast seem like the pearly gates"—coining new compliments for Florida has been an increasingly popular pastime since Ponce de Leon invented it. In the past it used to be "Winter garden of the money gods," too, but now Florida has become the popular playground for everybody who wishes to escape the bleak chill of a Northern winter.

For Florida offers a wide range of vacation fun, from the luxury of the expensive "hostelries of fashion" (the epithet is their own) to camping out and really roughing it. The possibilities of canoe trips in southern Florida are just being discovered: Charles Tenney Jackson in "The Fountain of Youth" paints a glowing testimonial of the results of a vacation spent "paddling of a stick of cypress thru the bayous and swamps." "We had the memories of wondrous dawns, sunsets, nights of friendly fires and pipes, days of chance and labor, simple faiths and cheery greetings; the banal snarl of the cities was gone quite out of our brains, some callous heaviness from our souls."

The people who argue the effect of climate upon character would do well to consider Florida. For there the weather is the principal asset—and liability. The natives guard its reputation jealously, but they tell one good story of the "land of perpetual sunshine." Once upon a time there was a freeze in St. Augustine. And an indignant tourist demanded of the "local color," who sells lucky beans in the town square, "Uncle, what makes it so cold?" "Huh," he replied, and his usually beaming, shiny black face was ashy gray and twisted into a tragic discontent with the chill, "Hit's dese Norderen people. We ain't had nothin' like dis ontwel dey began to come down here so much. 'Pears like dey brung it in dere clo'es."

But it takes one such exception to prove the "perpetual sunshine" rule. And Florida scenery is even more delightful to the Northern visitor than Florida climate. Two descriptions from "Florida Trails" by Winthrop Packard suggest its beauty. "Up the St. Johns from Jacksonville—the banks are lined with verdure green and gray—green with the foliage of century-old live-oaks and tall long-leaved pines, gray with the exquisite festoons and dangling draperies of the moss that decorates every tree and fairly smothers some of them. There is a crinkly grace, an elderly virility about it that is most engaging. It takes but little effort of the imagination to see the red cheeks of a myriad disciples of Santa Claus peering thru it ready to bring gifts to all good children."

Palm Beach "upon a ribbon of island between the muddy blue of Lake Worth and the unbelievable colors of the transparent sea beyond" has a different charm. "Man has set Palm Beach as a gem in a jungle which is itself as beautiful in its way as the nacre of the oyster in which we find the pearl. The beauty of the surrounding jungle you must learn little by little for it does not seek you, rather it withdraws and only subtly tempts. Yet when you come away you do not know which to love most, the gem or its setting. Unlimited resources of wealth have brought from the ends of the earth tropical trees and shrubs and set them in bewildering profusion. Wild nature in the setting, the landscape gardener in the gem have done it all. It prompts you to breathe deep and long and look about you with proprietary gladness as Adam and Eve might could they return for Old Home Week and tread again the well-remembered primrose paths."

**ST. AUGUSTINE.** The slave market, old city gates, Fort Marion, narrow streets and quaint houses with overhanging balconies are only a few charms of America's oldest city. Go to Anastasia Beach by trolley. Hotels \$2.50 up day, American plan. Reached from New York direct. Cost \$52.60, round trip excursion. Steamer from New York via Jacksonville. Cost \$45.60. From Boston via New York add \$10.50 to above rates. From Chicago, all rail via Jacksonville. Cost \$27.76 one way.

**ORMOND.** One of the most picturesque of the East Coast resorts. Situated on a peninsula. Fine trails and good roads and magnificent links. Hotels \$3 to \$6 up day. Boarding houses \$2.50 up day, American plan. Reached from New York all rail direct. Cost \$57.70, round trip excursion. From New York steamer and rail. Cost \$49.70 round trip excursion. From Boston via New York add \$10.50 to above rates. From Chicago all rail via Jacksonville. Cost \$29.81 one way.

**DAYTONA and SEABREEZE.** Daytona, a bustling, attractive town with a large cottage colony. Here one can enjoy boating on the Halifax River, hunting, fishing. Hotels \$3 to \$5 up day, American plan. Boarding houses \$2.50 up day, American plan. Seabreeze, with its fine beach, is on the peninsula opposite Daytona, connected by bridges. Golf, tennis, driving, boating and bathing can all be had here. Hotels \$3 up day, American plan. Reached from New York all rail direct. Cost \$52.80 round trip excursion. From New York steamer and rail. Cost \$50. round trip excursion. From Boston via New York add \$10.50 to above rates. From Chicago all rail via Jacksonville. Cost \$29.96 one way.

## Beautiful Handkerchiefs for Christmas

Reg. Trade Mark

Beautiful Handkerchiefs are always an appropriate gift—always welcome, always used! They never go to the attic. They are not apt to encounter serious differences of taste.

The Linen Store has been for sixty years the great American Treasure House of these dainty goods, for we carry every known kind of Handkerchiefs from every Linen making country.

In these times when many merchants find difficulty in getting good supplies, our satisfactory relations of long standing with the best manufacturers of Europe are

greatly in our favor. We have practically all our usual large variety and many delightful novelties.

*Madeira Handkerchiefs*—the sheer, dainty kind with the exquisitely hand-embroidered eyelets and scalloped edges, 50c to \$2.00 each.

*Armenian Handkerchiefs*—the kind with delicate Lace made on the Handkerchief, \$1.00 to \$2.00 each.

*Swiss Handkerchiefs*—all kinds of hand-embroidery, initials, ornaments, etc., 65c to \$25.00 each.

*Irish Handkerchiefs*—the endless practical and plain kinds for men, women and children, the machine Laces and Embroideries and much fine

handwork as well, 25c, 40c, and 50c each.

*Colored Borders*—A large variety of Handkerchiefs with colored borders and dainty embroidery effects, 25c, 50c each, and up.

All McCutcheon Handkerchiefs come in dainty white boxes with the imprint of the McCutcheon spinning wheel, to guarantee that they are strictly pure Linen.

Careful attention given to orders by mail.  
Send for special Christmas catalogue

**James McCutcheon & Co.**

Fifth Avenue, 34th and 33d Streets,

New York

## War Books of Absorbing Interest

### AMBULANCE No. 10 PERSONAL LETTERS FROM THE FRONT

By LESLIE BUSWELL, of the Field Service of the American Ambulance

"It has impressed me more than anything else from the front that I have seen." — *President Lowell of Harvard.*

"The reader follows to the end these courageous adventures of mercy, continuously absorbed and constantly moved." — *Owen Wister, Author of "The Pentecost of Calamity."*

Cost \$68, round trip excursion. From Boston via New York add \$10.50 to above rate. From Chicago all rail via Jacksonville. Cost \$31.96 one way.

#### A-SAILING ON THE SUMMER SEAS

Man has always longed for wings for he has envied the birds their power of migration from one climate to another as the seasons change. The steamship has given him this power and he is using it to escape from the Temperate Zone whenever it becomes intolerable. When the cold winds begin to blow and the snow to fall his thoughts turn southward as naturally as the needle turns toward the pole and if he is unrooted he follows his thoughts.

Europe is closed to the traveler now and besides even in peace time a tour of the Caribbean is less of an undertaking and more of an adventure than a tour of Europe. To cross the Atlantic brings one into the Old World where the hotels, the trains, the people and the climate are much the same as at home, but to cross the Tropic of Cancer brings one into a New World indeed where all is strange and wonderful.

## KEEPING UP YOUR MOTOR CAR

What are your motor car problems? Do you wish to know how to get more out of your car and keep it running free of trouble, and keep down the repair bills?

Perhaps you would like to consult our Motor Editor. He will gladly lend his services, without charge. In writing, you will help by stating the make and model of your car.

The Independent-Harper's Weekly Motor Service

The things one has heard about and read about and dreamt about suddenly become real and tangible. At night the ship plows thru phosphorescent waves and by day the purple jelly-fishes bob up like balloons from beneath the hull. Flying fishes dash thru the portholes ready to be fried and the vessel is convoyed by gamboling dolphins and piratical sharks.

There is no time to tire of a scene, for every day or two the vessel stops at a new port. In course of a single winter cruise the tourist may visit half a dozen different republics or compare the colonial administration of Denmark, Holland, France, England and the United States. Yet you are not put to the trouble of changing trains or hunting a new hotel. You are in a traveling home, sleeping in your own bed with your own things about you, with the privilege of exploring a new land any time with a picked party of friends, afoot or on horseback, by carriage or automobile.

There is infinite variety in these Caribbean countries. Some are mountainous; some are flat. Some are forested; some are sandy. A tropical land is an outdoor hothouse and a live grocery store. Ungrated coconuts hang from the palm trees and at the glint of a coin a chocolate-colored acrobat will shin up the trunk and bring down one for you to drink. Here nutmegs grow unground each wrapt in a coat of mace. Here vanilla comes in beans not bottles and cocoa in pods instead of cans. You may reach up and pick a lime, reach down and pluck a pineapple, reach out and cut a sugar cane and mix in your own collapsible cup a fruit punch seasoned to suit your taste. And if you tire of exotics you may drop into the Carnegie library and read your home magazines.

It is the land of romance. As the ship is anchored in the harbor you may sit in your deck chair and read Masefield's "On the Spanish Main," Kingsley's "At Last," Froude's "British in the West Indies" or Exquemelin's "Bucaniers of America"; then raising your eyes from the book you may look at the scenes you have been reading about. If it is St. Thomas, you may see the tower reputed to belong to Bluebeard, the greatest lady-killer on record. If it is Kingston harbor you may see where the troops sent out by Cromwell in 1655 conquered the island for England.

It is the land of opportunity. American capital and American enterprise are penetrating the American tropics and bringing to them peace and prosperity. The Danish Islands are being bargained for. American cities are being built upon the Panama Canal Zone. Nicaragua has given us an option on another canal route. The finances of Haiti and Santo Domingo are safeguarded by the United States. The Central American coast is supplying our breakfast tables with fruits. Enough bananas are brought to the United States every year to give each man, woman and child sixty-five a year. If the reader has failed to get his sixty-five let him call at the corner grocery or better still

## We are Becoming Conversational NOBODIES!

"—why, do you realize that we seldom have anything to talk about, nowadays, except the children or the housework or the bills?"

"I know it. When people come in I'm really ashamed. I have never cared for small talk—but we haven't any 'large' talk. We must brush up. We must do some good reading."

"Yes—but what shall we read? It sounds like a funny question, with all the world of literature there is to choose from. But I must confess I don't know where to begin, or what to read, or how to choose."

"That's just it. We are both really interested in worth-while things—art, travel, history, literature, music, nature—but if we were to delve into all those things we'd just get into a maze, and we'd never get anywhere, and pretty soon we'd give it up. You know we would."

"You are right! Oh, if someone would tell us each day, in just a few minutes, even one thing we really ought to know—" And right here

## The Mentor Association

comes into your lives. The Mentor Association has 70,000 members who, like you, are really interested in worth-while things, who have found that such things must be a part of every well-rounded existence, and who realize that they haven't the time or the special training to dig deep into all subjects.

Twice a month, the first and the fifteenth, they receive "The Mentor." Each time a special topic is discussed with absorbing interest by an authority who is also a gifted writer. And with each issue of "The Mentor" are six gravures or color pictures, reproduced on heavy paper which, added to the illustrations throughout the text, and the text itself, leave with you a graphic and vivid recollection of the subject.

### For Instance

"The Mentor" of August 1 contained an unusually interesting and human article on Argentina by E. H. Newman, lecturer and traveler.

On August 15 "The Mentor" took to all members a discussion of Game Animals of America by that student of animal life, W. T. Hornaday, Director New York Zoological Park.

The September 1 issue was devoted to the life and the art of Raphael, told by Professor John C. Van Dyke, Rutgers College.

Hamilton W. Mabie wrote of Walter Scott in "The Mentor" of September 15.

"The Yosemite Valley" was the subject of a discourse by Dwight L. Fildes in "The Mentor" of October 2, and you can well imagine the beauty of the accompanying pictures in color.

These are examples. The texts, from time to time, reach into the realms of Fine Art, Travel, History, Biography, Literature, Music, Domestic Art, Nature and Popular Science. Each is lavishly illustrated in addition to the separate gravures or color pictures.

But "The Mentor" itself is only part of what The Mentor Association means to you.

### What Membership Brings

Briefly, membership in The Mentor Association gives you these five things:

**First.** 24 issues of "The Mentor," bringing a beautifully printed and illustrated story every two weeks, all about one subject, written by a leading authority upon that subject—300 pages during the year.

**Second.** 600 beautiful illustrations, distributed during the year through the text of the 24 issues of "The Mentor."

**Third.** 144 gravure or color pictures, reproduced on heavy paper, all ready for framing, in deep, rich tones that bring out all the beauty of the originals. On the back of each picture is a crisp five-minute description of the subject that is portrayed.

**Fourth.** Answers to any questions on art, travel, literature, history, nature or architecture; each answer by an authority.

**Fifth.** Authoritative Club Programs. Any program you may want for a club, a reading circle, a literary afternoon or evening—each made for you by an expert.

### How to Join

The Mentor Association wants among its members only those people who love the finer things of life—who are interested in music, nature, art or travel—who have a real desire for self-improvement and broadening. If you are one of these people (and we believe you are, if you have read thus far), we cordially invite you to our membership.

But, first—you must be convinced. So we make this offer. Write your name and address on the coupon below; tear it off and mail it to us. Send no money; you will receive a copy of "The Mentor." If you like it, and want to join The Mentor Association, send \$1 on receipt of a bill from us, and \$1 each month for but two months thereafter, until a total of only \$3 has been paid.

A membership in The Mentor Association is yours for but \$3 a year; 12½ cents for each issue of "The Mentor."

You are placed under no obligation by signing the coupon. This is a special offer. Don't let it pass. Tear out the coupon now, while it's on your mind.

Indpt., 11-7-16

### THE MENTOR ASSOCIATION 52 E. 19th St., New York, N. Y.

Please send me one issue of "The Mentor." If, after reading it, I decide to become a member of The Mentor Association, with all privileges as advertised, I will send you \$1 on receipt of bill and \$1 a month thereafter until \$3 has been paid.

Harold Bell Wright  
Author—Illustrator

Best Selling Novel  
Ever Published

Cloth \$1.35 Leather \$1.85  
Illustrations and Decorations by the Author

**WHEN A MAN'S A MAN** is a story, true, of the real heart of the life of the unfenced land of ranch and range of Northern Arizona.

A Girl Graduate Says, "WHEN A MAN'S A MAN" is so clean, so wholesome, so uplifting that it impels me to shout from the house-tops to every young man and every young woman in the land and implore them to read this wonderful story of manhood. It just thrills with interest. It strikes the responsive chord of your heart's purest and best wishes and desires.

**The New York Times:** There is much of the vigorous outdoor life of the Southwest in the story, and Mr. Wright writes of it with knowledge and with graphic truth.

**Messenger of the Sacred Heart:** Through it runs a pretty love story that has the charm of being sweet and clean.

**The Continent, Chicago:** Harold Bell Wright knows you and me, our temptations, our sins, our struggles, our hopes of triumph over ourselves and also the certainty of our triumph, if we go straight after the task and with the proper leading, stick at it until victory comes. He writes of life as it is lived and of you and me as we live it. \* \* The novel is an inspiration.

## What 15c WILL BRING YOU FROM THE Nation's Capital

The little matter of 15c in stamps or coin will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send it on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box 38, Washington, D. C.**

## HEALTH—LOOKS—COMFORT

Wear this scientifically constructed health belt, endorsed by physicians and surgeons. A light but durable support for the abdomen which greatly relieves the strain on the abdominal muscles. Recommended for obesity, lumbago, constipation, spinal deformities, floating kidney and all weaknesses in the abdominal region.

## THE "WONDER" HEALTH BELT

Releases the tension on the internal ligaments and causes the internal organs to resume their proper positions and perform their functions in a normal, healthful way. Easy to adjust—a great comfort to the wearer. For men, women and children.

Write for descriptive folder or send \$2 for the belt on money back guarantee. In ordering, send NEARLY true measure of your waist. **The Weil Health Belt Co., 109 Hill St., New Haven, Conn.**

## ANDIRONS

MARBLE, STONE and WOOD  
MANTELS

**Wm. H. Jackson Company**  
2 West 47th Street New York City

take a steamer headed south and pick a bunch for himself.

**NASSAU, Bahama Islands.** This is the capital of the islands, noted for its equable climate, and is a place of unique charm. Fishing, golf, tennis, polo are among the many amusements. Surf bathing is perfect, for the water is never too cold nor the wind too raw. Then, too, there are the Sea Gardens, the famous Queens Staircase and Forts Charlotte, Montague and Fincastle. Hotels \$3 up day, American plan. Reached from New York steamer direct. Cost \$40 one way. From Boston add \$10.50 to round trip excursion, \$5.25 one way to above rates. From Chicago via New York add \$21 to above rate.

**JAMAICA, Kingston.** An interesting city with wide, shaded streets, where the natives, East Indians, Chinese and Syrians strolling about form attractive pictures. Specially interesting are the Museum, Victoria Market, Hope Gardens (reached by trolley) and the trip to Constant Spring at the foot of Blue Mountain six miles distant. Hotels \$2.50 to \$5 up day.

**PORT ANTONIO.** The town is quaint and the drives interesting. Among the most charming of these drives is the one to Blue Hole and to Moore Town. The "Rafting Trip" down the beautiful Rio Grande must not be omitted. Hotels \$2.50 to \$5 up day, American plan. Reached from Kingston by rail, the cost being \$3 each way. Jamaica is reached from New York via steamer direct. Cost \$60 one way. From Boston via New York add \$5.25 one way to above rate. From Chicago via New York add \$21 one way to above rate.

**HAVANA, Cuba.** A city full of historic interest and charm, where there are many places to visit, the most noted being the Governor-General's Palace, the Tomb of Columbus, Atares Castle, the Cathedral. Hotels \$2 up, European plan; \$5 up, American plan. Reached from New York via rail and steamer. Cost \$87.80, round trip excursion. Reached from New York via steamer. Cost \$40 up one way. Reached from Boston via New York \$10.50 additional round trip excursion. Reached from Chicago via New York \$21 one way to above rates. Reached from Chicago via Jacksonville rail and steamer. Cost \$56.61 one way.

**PANAMA, Colon.** A typical Latin-American city with a perfect climate. Hotels \$3 to \$5 up day, American plan.

**PANAMA CITY.** Most ancient town on the American Continent. Its narrow, crooked streets, old government buildings, President's Palace, National Theater, ancient churches and shops are well worth visiting. There are many interesting drives, the most famous one that to Old Panama City, Ancon Hill and Balboa. Hotels \$3 to \$5 up day, American plan. Cost from Colon by train \$3 each way, via steamer thru Canal \$6 each way. Colon is reached from New York direct via steamer. Cost \$85 one way. From Boston via New York add \$5.25 to above rate. From Chicago via New York add \$21 to above rate. From Chicago via New Orleans. Cost \$88.65 one way.

## THE GOLFING TRAIL

Nowadays efficiency's the thing. And idle tools are not efficient. Which may—or may not—be the reason why most golfers are refusing to continue the old-fashioned custom of storing away their clubs and golf togs when winter comes on, but are following the game south to fresh greens and bunkers new.

Pinehurst is perhaps the leading winter links. Most Southern resorts have put golf in their list of attractions now, but Pinehurst was the first to "play it up." For the coming season of 1916-1917 twelve tournaments are scheduled there between November and April—

and one Consolation Tournament, the most popular midwinter event. But specific information as to where and when to play golf is easily available. The notes at the end of this article suggest half a dozen of the most popular winter Golf Clubs and tell you how to get there.

As for urging a golfer to play golf—why waste paper? Any one who plays at all has a fixed ambition to play more, and better. As Harry Vardon explains it in his story of "The Complete Golfer": "I have sometimes heard good golfers sigh regretfully after holing out on the eighteenth green, that in the best of circumstances as to health and duration of life they cannot hope for more than another twenty, thirty or forty years of golf; and they are then very likely inclined to be a little bitter about the good years of their youth that they may have wasted at some other less fascinating sport." The moral of those misspent years is obvious. Don't waste this winter!

**AIKEN, South Carolina.** A quaint southern town set in the pine belt. Hotels \$4 up day, American plan. Boarding houses \$2.50 up day, American plan. Reached from New York via rail direct. Cost \$38.40 round trip excursion. Or via steamer and rail via Charleston. Cost \$36.75 round trip excursion. Reached from Boston via New York. Additional cost \$10.50 round trip excursion. Cost, all rail from Chicago, \$22.55 one way.

**AUGUSTA, Georgia.** Fine golf links. Hotels \$2.50 to \$5 per day, American plan. Reached from New York via rail direct. Cost \$39.30, round trip excursion. Steamer and rail via Charleston. Cost \$36.75, round trip excursion. From Boston, via New York, \$10.50 additional. Cost, all rail from Chicago, \$22.24 one way.

**ASHEVILLE, North Carolina.** An all-the-year-round resort commanding a splendid view of the surrounding mountains. Hotels from \$2.50 to \$7 per day, American plan. Reached from New York via rail direct. Cost \$31.50 round trip excursion. From Boston, via New York, \$10.50 additional. Cost, all rail from Chicago, \$17.05 one way.

**CAMDEN, South Carolina.** An ideal resort with its fine climate, old gardens and historic associations. Hotels \$4 up day. Boarding houses \$2.50 up day, American plan. Reached from New York via rail direct. Cost \$33.80 round trip excursion. From Boston, via New York, \$10.50 additional. From New York, steamer and rail via Charleston. Cost \$38 round trip excursion. Cost, all rail from Chicago, \$22.95 one way.

**PINEHURST, North Carolina.** Golf is the chief attraction. Hotels from \$2.50 to \$5 up day, American plan. Reached from New York via rail direct. Cost \$28.60 round trip excursion. From Boston via New York the cost is \$10.50 additional. Cost, all rail from Chicago, \$21.89 one way.

**SUMMERVILLE, South Carolina.** Famous for its golf, its ten gardens and its beautiful drives. Hotels \$3 up day, American plan. Boarding houses \$2.50 up day, American plan. Reached from New York via rail direct. Cost \$37, round trip excursion. Steamer and rail via Charleston. Cost \$34.10, round trip excursion. From Boston via New York the rate is \$10.50 additional. Cost, all rail from Chicago, \$23.80 one way.

A careful diagnosis of the war babies of Wall Street discloses the sad fact that many are undoubted victims of infantile paralysis. *New York World.*

Now that a hurricane has leveled part of the Danish West Indies, Denmark ought to offer them as a bargain, slightly damaged at \$21,000,000. *Philadelphia North American.*

# Which!

## Churchianity or Christianity?

From thousands of pulpits ministers of the Christian Church soon will preach upon the birth of Christ and His message to the world. Another Christmas will pass with millions of men engaged in a gigantic war of extermination.

*Is the Church to Blame?*

*The Rulers of Europe are Christians*

*The Armies are Composed of Christians*

*Have they the Christ-Spirit?*

While the organized Church acclaims Christ and glorifies His name, one of its ordained ministers sharply indicts it.

At this, the very crisis of its existence, will it emerge triumphant, revived, or heedless of the times, be forever crushed?

In four notable books John Herman Randall discusses:

(1) "Humanity at the Crossroads." "The wide gulf that separates Christianity-the-system . . . from the pure spiritual and universal religious movement that Jesus inaugurated," and asks "Shall the real religion of Jesus Christ seriously and honestly be put into practice?"

(2) "A New Philosophy of Life." A review of the various New Thought movements and the reasons for their growth. The author asserts they no longer can be met with wholesale condemnation or ridicule.

(3) "The Life of Reality." What it means and from whence it springs. Religion and Science are found to be in accord. The "second coming of Christ" is interpreted from an entirely new standpoint.

(4) "The Culture of Personality." A remarkably interesting and understandable consideration of character-building through the development of personality.

YOU need these books. They may change your entire outlook on life. They were written for the thinker, for the man who has been groping in the dark, for those that have doubts. They breathe hope, courage, inspiration. Each one has a message.

## "Headaches—How Prevented"

What is more exhausting than a headache? Yet—a headache is "only a symptom." It is in the conditions back of headache—the conditions by which headaches are caused—that the real danger lies. High blood pressure, auto-intoxication, eye-strain and worse disorders cause headaches. To be rid of headaches, you must get at their cause. How to do this is explained in a new book, "Headaches and How to Prevent Them" by Dr. W. H. Riley, a Neurologist who has had years of experience in treating all kinds of headaches. You may get relief by following the teachings of the book. No drugs. Only natural means—diet, exercise, rest and sleep. We send this book for your FREE examination. All you do is ask for it. (See the coupon.) If not satisfied with the book, return it at our expense. Your examination costs you not a penny. If you keep the book, you remit only \$1.50. Not a large book but worth its weight in gold to the headache sufferer.

## The New Books

### THE CITY CHURCH

Bishop Frederick DeLand Leete's experience as a pastor in five different city parishes, his virile mind and broad conception of religious need and service, fit him to write a suggestive book on *The Church in the City*. He discusses the strategic position of the city church in the present phase of civilization's progress. The downtown church and the various problems with which such an institution is faced are earnestly treated. There are wise chapters on the opportunity and service of the metropolitan pastor, the responsibilities of laymen, and the attempts to secure church endowment. The bishop is firmly convinced that the trend toward institutionalism is in the interests of the larger mission of the church. He advises advertising of a judicious character, and holds that the central church has a large debt of responsibility to suburban efforts as well as to a clean, prosperous, and wholesome city life.

*The Church in the City*, by Frederick DeLand Leete. The Abingdon Press. \$1.

### THE LION'S SHARE OF LIFE

Mr. Arnold Bennett has a curious taste in heroines; they are always out of the ordinary, but not always agreeable; sometimes, as in the case of Hilda Lessways, positively repellent. In *The Lion's Share* the heroine, Audrey Moze, has an insatiable appetite for adventure: "I want—I want all the sensations there are and I want to be everything. And I can be." Young, rich, lovely Audrey longs for greater freedom than is accorded to young girls, hence she dons the weeds and wedding ring of a widow, and goes from quiet Essex to most unquiet Paris. Her career as a suffraget in England is full of amusing episodes; her veiled identity constantly gets her into trouble; detectives follow her; she becomes an "angel" to a temperamental musical genius; she tries Art in Paris; suffragism in London; an idly luxurious existence on a yacht, yet she is never satisfied with experience, she attempts the impossible; eating her cake and keeping it too, and never loses her charm of ingenuous egoism. Her friend and companion, Miss Ingate, is one of the most delightful, whimsical and lovable of women: old enough not to ask too much of life, young enough to be sympathetic with Audrey's ambitions. She is a foreordained spinster, but no man-hater. Audrey asks Miss Ingate:

"Were you ever engaged?"

"Me? Oh, no!" answered Miss Ingate with tranquillity. "I'm very interested in them. Oh, very! Oh, very! And I like talking to them. But anything more than that gets on my nerves. My eldest sister

## At the Rainbow's End

is Nassau-Bahamas, a quaintly foreign colony, wonderfully rich in the romantic strangeness and astounding color of the Tropics.

From December to April the climate is that of June, while but a short distance away, cities in the United States are being racked unceasingly by storm.

Wouldn't a month or two in Nassau with its marvelous surf bathing, big game fishing, tennis and golf—be a holiday to remember?

Wouldn't you come home wonderfully "fit"?

Write today for "Nassau-Bahamas" and Hotel, Boarding House and Furnished Villa Register. The time to go is this winter, and the time to plan is NOW.

was the one. Oh! She was the one. She refused eleven men and when she was going to be married she made me embroider the monograms of all of them on the skirt of her wedding-dress. She made me and I had to do it. I sat up all night before the wedding to finish them."

"And what did the bridegroom say about it?"

"The bridegroom didn't say anything about it because he didn't know. Nobody knew except Arabella and me. She just wanted to feel that the monograms were on her dress, that was all."

"How strange!"

"Yes, it was. But this is a very strange part of the world."

The reader of *The Lion's Share* quite agrees with that verdict upon Essex.

*The Lion's Share.* By Arnold Bennett. George H. Doran Co. \$1.50.

#### DRIFTING

*Hesitations* is a fitting title for the policy of hopeful drift, which, Morton Fullerton charges, led some of the European governments into the war, and has, for the most part, characterized the attitude of the American administration. In a discussion of the Monroe Doctrine Mr. Fullerton maintains that what was originally a compact between the United States and Great Britain to uphold democracy on this continent, has been perforce, in the march of events, expanded to embrace a world policy. A position of isolation being no longer possible for the United States, it was a solemn duty for this country to protest the German invasion of Belgium as an attack upon the universal principles of democracy, to which the United States had further set her seal at The Hague Conference.

He points to the immense ignorance of the nation at large concerning foreign affairs, and the bewilderment in which it found itself from the lack of decisive leadership. This policy of hesitation, he holds, has brought us to the verge of war more than once, and the failure to grapple vigorously with internal treason has caused European governments to doubt if we be capable of a united nationality.

*Hesitations.* by W. M. Fullerton. Doubleday, Page & Co. \$1.25.

#### A NEW HISTORY OF FRANCE

In the light of the Great War, France has assumed a new importance in the world. Many erroneous notions of French life—well known to be erroneous by the initiated—have been dispelled from the popular mind. A deeper interest is being aroused in those thriving cities, ancient villages and sunny fields of Picardy and Champagne which have been so ruthlessly desolated by bombs and mines and shells. This violated home of industry and culture contains the memory of a hundred battles and sieges which centuries ago were incident to the development of French civilization, enlightenment and freedom.

Up to the present there has been no complete and reliable history of France easily accessible to English readers. Tho there are the shorter manuals, such as Duruy's and monographs covering single periods, the great composite work edited by M. Lavisse is still untranslated. Now we are to have this defect

RAYMOND & WHITCOMB CO.

remedied by a work of moderate compass, which, if we are to judge by the first instalments, will immediately take its place as an attractive and accurate exposition of French history from the Middle Ages down to the present. It is full enough and furnishes sufficient detail and significant incident to hold the attention of the reader. It is more descriptive than philosophical, and yet its narratives are not long enough to be tedious. The work, coming from the pens of five well known French historical writers, will be complete in six fair-sized, well-printed volumes, three of which are already published.

The first volume to appear is *The Century of the Renaissance*, by Louis Batiffol, translated by Elsie F. Buckley. The lively and picturesque style of the author is well reproduced in the translation. The period covered by this volume extends from 1483, the beginning of the reign of Charles VIII, down to the death of Henry IV in 1610. The author tells the story in a clear and brilliant way. His pen sketches of kings, princes and influential personages are strikingly drawn. There is a fascinating power in such a history which reads more like a novel than the record of a country's progress.

The volume covering *The Eighteenth Century in France* is written by Casimir Stryienski, and that on *The French Revolution* by Louis Madelin; both of them carry forward the work in the same authoritative, vivacious and interesting way.

*The Century of the Renaissance*, by Louis Batiffol; *The Eighteenth Century in France*, by Casimir Stryienski; *The French Revolution*, by Louis Madelin. G. P. Putnam's Sons. \$2.50 each.

### AMONG THE ARTS

*Expression in Singing*, by H. S. Kirkland, is practically devoted to advancing the idea (by no means novel) that the emotional interpretation of vocal music deserves as much attention as the more mechanical matters of voice production and technique. (Boston: Badger, \$1.)

The latest volume on book-plates, limited to 200 copies, deals with the work of Carl S. Junge. The introduction is by Zella Allen Dixon. The decorative pictorial, which is up to the minute, is favored by this artist, whose technical treatment is excellent. (Columbus, Ohio: Champlin Press, \$1.)

In the second volume of *The Appreciation of Music*, Daniel Gregory Mason continues his explanatory studies of compositions from most of the great modern composers from Schubert to Debussy, not including the operas. A useful book to the concert lover who is not a musician. (New York: H. W. Gray, \$1.50.)

F. S. Muckey's book, *The Natural Method of Voice Production*, does not deal with the technique of singing as ordinarily understood, but analyzes the mechanical and physiological principles which underlie all voice production. The book is scientific, and teachers and serious students of elocution or singing will find it practically useful. (Scribner, \$1.)

Miss Beegle, worker in the New York Shakespeare tercentenary, and Mr. Crawford, of the Dartmouth pageants, have written a most useful book on *Community Drama and Pageantry*. Its chapters on Color and the Dance are especially illuminating. It is full of practical advice on organization, setting, costume, and the large bibliography is invaluable. (Yale Univ. Press, \$2.50.)

## OLD LINE AND ASSESSMENT

Occasionally I am in receipt of protests from readers against what they regard as unfair criticisms of certain fraternal orders and assessment life insurance companies and associations. They seem to have the idea that I am prejudiced in favor of old line insurance companies, and they sometimes hint at motives not disinterested.

Their error lies in a failure to understand that in all such cases I am dealing with facts, generally such concrete facts as are involved in the mathematics of the business. No life insurance scheme which fails to include a mathematical reserve, based on a standard table of mortality and a safe rate of interest, can guarantee a level premium from first to last, or security to its insured. These are not matters of opinion and, therefore, provide no material for the formation of prejudices; unless one may be charged with a weakness in holding that two and two are four.

For about forty years men of energy, ingenuity and good organizing ability have been engaged in an effort to provide life insurance protection at a cost lower than that furnished by old line companies. They have invented innumerable schemes to that end, every one of them a total or partial evasion of the full mathematical reserve. They have devised substitutes for it and given them alluring names. When one substitute for a proper reserve failed, another was invented. They will all fail in their turn, because two and two are eternally four.

But the pity of it is that thousands of persons ignorant of the essential facts, convinced by plausibilities, are won over to these false theories; with the result that they waste their time, their money and their opportunities, most of them destined to the fate which has overtaken the older members of the Royal Arcanum.

Before me lies the letter of a correspondent in Spokane, Washington, protesting against an unfavorable opinion expressed in this department on the plan of insurance operated by the Guarantee Fund Life Association of Omaha. He assumes that I am merely representing the position and presenting the views of old line companies, and that without investigating the plans of the assessment association named. This he regards as an injustice to the association's members. What has been said in this department about the association cannot do its members any injury. While on this subject it may be of interest to observe that the by-laws of the association vest the control of all its

An Advertisement by  
THE PULLMAN COMPANY

**Cleanliness.** To maintain in a condition of absolute cleanliness the

large number of cars, constantly in operation in every part of the country under conditions of dust and dirt unavoidable in railroad operation and annually accommodating approximately twenty-five million passengers, requires an elaborate organization trained by years of experience and maintained at a large annual expenditure.

The modern Pullman car contains everything essential to cleanliness and sanitation which the best experts upon these subjects have been able to devise.

After every trip each car is thoroughly cleaned and at frequent intervals fumigated in accordance with state and federal standards.

To accomplish this three hundred and eighty-three cleaning stations, with over four thousand yard employees, are maintained in various cities.

By such thorough and consistent effort every Pullman passenger receives the greatest possible protection from the discomfort of dust and dirt usually associated with railway travel.

AGE NO. 5500

**H**ERE is your future charted for you, based on the actual average earnings of trained and untrained men.

Which way will you go—up, through training, to a position that means good money, or down, through lack of training, into the ranks of the poorly paid?

It rests with you. And now is the time to decide. Not next year, not next month, but now. You can get the training that will command a trained man's salary. The International Correspondence Schools have helped hundreds of thousands to qualify for advancement. Let them show you how you can prepare yourself, in your own home, for the position you want in the work you like best.

Just mark and mail this coupon. It will be the first step upward. Mark and mail today.

**The Key To Success**

**Stop Forgetting**

**Increase Your Efficiency**

The secret of business and social success is the ability to remember. I can make your mind an infallible classified index from which you can instantly select thoughts, facts, figures, names, faces. Enables you to concentrate, develop self-control, overcome bashfulness, think on your feet, address an audience. Easy. Simple. The result of 20 years' experience in developing memories of thousands of students. Write today for copy of my book "How to Remember" and Copyrighted Intensely Interesting Memory Test Free, also how to obtain FREE copy of my book "How to Speak in Public."

**Prof. Henry Dickson,**  
Principal,  
Dickson School of Memory, 404 Hearst Bldg., Chicago, Ill.

affairs in the hands of a board of five directors, and that the board is composed exclusively of the officers of the association, from which it would appear that the interests of members are confined exclusively to holding certificates and paying assessments on them.

Continuing, my correspondent says: "Any moneys collected by an insurance company above the actual cost, as shown in the American Mortality Table, has nothing to do with insurance and gives no protection." In a narrow, short-sighted way that is true, if we leave out the question of expense. But let us see where it leads. The "actual cost" per \$1000 of protection, as stipulated above, at age thirty-five, is \$8.94; the next year it is \$9.08; the next, \$9.23; then \$9.40; then \$9.58. At forty this "actual cost" has risen to \$9.79; at forty-five it is \$11.16; at fifty, \$13.78; at fifty-five, \$18.57; sixty, \$26.69; sixty-five, \$40.12; seventy, \$61.99; seventy-five, \$94.37. How many men needing insurance from age thirty-five to age seventy-five are able to follow that ascending scale of "actual cost"? That is precisely what they must do if, from the beginning, they failed to add to that "actual cost" an additional sum each year which, accumulated at interest, serves to keep the amount of the premium "level" and reasonable. This additional sum is the reserve. It must be sufficient; therefore it is mathematically ascertained. Without it, there can be no guaranteed level premium and no certain security.

The plans of the Guarantee Fund Life Association make no provision for a reserve of this character and, therefore, it is my opinion that its rates will prove inadequate as its membership increases in age. This means that the power to assess, possess by the directors, will be exercised.

To conclude: while the natural way is to pay the mortality cost as incurred each year—a very easy way in the beginning—it is impracticable and injudicious, because it involves the assumption of a constantly increasing burden, one which the vast majority of persons cannot successfully bear during the older years. Old line reserve insurance equalizes the burden, placing the greater portion of it on the first years, those which constitute the stronger and more productive period of life, turning over to the processes of compound interest the task of lightening it as the years accumulate.

E. D. P., Vandling, Pa.—The Farmers and Traders Life Insurance Company of Syracuse, New York, was incorporated in January, 1913, and commenced business in July, 1914, with \$200,000 cash capital and \$100,000 of paid-in surplus. Its financial condition on December 31, 1915, was: admitted assets, \$279,942; total liabilities, including capital and a net reserve of \$17,497, were \$224,963; net surplus, \$54,979. During 1915 it wrote \$1,091,000 new insurance and ended the year with \$1,034,000 total insurance in force. The total premium income in 1915 was \$28,156; total of all income, \$46,673. Its agency expenses were \$34,177; home office expenses, \$22,514; total disbursements, \$67,345. The New Jersey Life Insurance Company is a new incorporation at Newark, N. J. Former Justice of the New York Supreme Court Edward A. McCall, who was president of the New York Life, is to be its president.

# THE MARKET PLACE

## NEW LOANS

China has obtained a loan of \$5,000,000 from the Continental and Commercial Bank of Chicago, and the money is to be used in enabling a resumption of specie payments by the Chinese Government's two banks. The 6 per cent Treasury notes, with a term of three years, will be secured by a first charge upon the annual revenue, about \$5,000,000, derived from the sales tax on tobacco and wines. This transaction excites some interest because of Japan's attempt or desire to supervise China's financial dealings with foreign nations, and also for the reason that Secretary Lansing, in a letter to the loaning bankers, said that the Department of State "is always gratified to see the Republic of China receive financial assistance from the citizens of the United States," and that the department's policy is "to give all proper diplomatic support and protection to the legitimate enterprises abroad of American citizens." China would like to borrow \$30,000,000 more.

The new loan of \$50,000,000 to Russia—five years, 5½ per cent, offered at 94¾, to yield about 6¾—is secured only by the credit and good faith of the Russian Empire. In the group that will market the bonds are J. P. Morgan & Co., the National City Company, and the Guaranty Trust Company. It is now expected that additional British and French loans will be negotiated here without collateral and secured only by the credit of the borrowing nations. Some remarks made by Mr. Davison, of the Morgan firm, after his return from London, may have been intended to prepare the public for such a change of method. The Guaranty Trust Company has loaned \$471,800 to the Water Board of Valparaiso upon the security of bonds guaranteed by the Republic of Chile.

## THE MARKET FOR STOCKS

There is plenty of work for the brokers on the New York Stock Exchange. In one day last week a little more than 2,000,000 shares were sold, and in another the number exceeded 1,000,000. In election week, ending on the 11th, the average of prices showed a net loss, although the copper and steel shares were strong. Steel Corporation, common, gaining 2½ on transactions amounting to nearly one-fifth of the week's business. For one of the smaller steel companies, the Gulf States, there was a gain of 38 points. But railroad stocks declined. At the beginning of last week there was an upward movement, led by the copper shares, on account of the very high and rising price of the metal. But in the second half of Monday the prices of industrials and railroad stocks fell away. Some as-

cribe the change to rumors about overtures for peace. On Tuesday, the 14th, there was very little change in the price average. Railroads were weak, on the reported threat of a strike if enforcement of the eight-hour law on January 1 should be prevented by court proceedings. The greatest car shortage in ten years had some effect. But 2½ points were added to the price of Steel common. On Wednesday fluctuations and uncertainty were followed by strength in the closing hours. The shares of steel companies were affected favorably by the addition of \$5 a ton to the price of rails. War order stocks advanced. In Thursday's broad market (1,938,000 shares) there was a general gain, even the railroads rising a little. Gulf Steel's addition was 24, and even Corn Products (soon to be dissolved on account of a trust decision) moved upward 4 points. Dividend announcements encouraged investors. There were more of these on Friday, when war order, copper and steel company stocks advanced, in a market of 2,082,000 shares.

A remarkable dividend distribution was made by the General Chemical Company, which increased its quarterly rate for 1½ to 2 per cent, at the same time giving 5 per cent extra and 15 special, and authorizing shareholders to subscribe for new stock at par (now selling at 321) to the extent of 20 per cent of their holdings. Increases were announced by the Calumet and Hecla Copper Company and the Standard Oil of Ohio. In two weeks the Gulf States Steel advances have been 88 points for the common and 86 for the second preferred, which is convertible.

## COTTON AND WHEAT

At last the price of cotton in the New York market has risen to 20 cents a pound. A few months ago planters were urged to force an advance to these figures by declining to sell. On the 17th sales were made at a little above 20½ cents. There is a strong demand from manufacturers here and abroad.

Sales of wheat in Chicago at \$1.92 per bushel were reported last week, and the price of corn rose to 99 cents, but afterward there was a decline to \$1.82 for wheat, owing partly to rumors that demands for an embargo were regarded with favor at Washington. The news from Argentina tends to increase prices. In that country there will be short crops of wheat and oats, and only a small surplus that can be exported. But in Australia, where the harvest is in progress, the crop is said to be a large one. It is estimated at Chicago that more than half of the wheat we can spare has already been exported. Shipments from this country and Canada have recently been about 6,000,000 bushels a week.

## Salt Mackerel CODFISH, FRESH LOBSTER RIGHT FROM THE FISHING BOATS TO YOU

**FAMILIES** who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.**, by the **FRANK E. DAVIS COMPANY**, with newly caught, **KEEPABLE OCEAN FISH**, choicer than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT** sending by **EXPRESS RIGHT TO YOUR HOME**. We **PREPAY** express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

**SALT MACKEREL**, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

**CODFISH**, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat at a much lower cost.

**FRESH LOBSTER** is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in **PARCHMENT-LINED CANS**. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

**FRIED CLAMS** is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

**FRESH MACKEREL**, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products.

Write for it. Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

# JOHN KENDRICK BANGS

Presents THE GENIAL PHILOSOPHER

HANKSGIVING?" roared the Cynical Sciolist, scornfully. "What on earth have we got to be thankful for, I'd like to know? My wife had to pay nineteen

cents for a chop yesterday, and as for eggs—my heavens! Eggs have gone up so high they tell me those Flagstaff astronomers thought they were a new cross-section of the milky way."

"Well, what of it?" said the Genial Philosopher, contentedly tapping his fingers together. "What of it? Life isn't all chops and eggs. The air is still free, and the rain continues to fall upon the just and the unjust with equal and economical impartiality. As for me I am just as thankful as I can be. I ooze gratitude from every pore, and I don't care who knows it. You see, Brother Sinnick, I don't measure my prosperity on a dollar basis, and so I can get a great deal of pleasure out of life that you currency-standard people miss, and for that am I truly grateful. I'm thankful for a new discovery in melons, for instance. Now you, and old man Skin-nem, when you sit down to breakfast and eat a Honeydew Melon, are simply consumed with wrath because you have to pay seventy cents for a single luscious segment of it. All you think of is seventy paltry coppers, and of course it gives you indigestion. But I, on the other hand, when my spoon swoops down thru the juicy pulp, and I lift the dripping portion to my lips, and let all that liquid sweetness trickle down into my system, think only of the unalloyed nectarine loveliness of it all, of all the fluid sunshine stored up in that delectable invention of the gods. I just shut my eyes and gloat over the titillation it gives to my palate, and then cast mine optics upward and render thanks to the Pomological Department of the Cosmic Blessing Company for having conferred such a boon upon humanity. Why don't you forget the seventy cent end of the thing, and get down to the intrinsic beatitude of it?"

"Because I can't—that's why," retorted the Cynical Sciolist. "It's my conscience that grips and holds me back. I know I can't afford to begin my breakfast or finish my luncheon with seven dimes' worth of shredded dew."

"Then you should go without it," said the Genial Philosopher. "It isn't the fault of destiny that your conscience troubles you—it's your own. If you know you cannot afford a melon costing seventy cents, you should content yourself with a Matteawan Sundae. They cost only ten cents apiece, and they are things to be mighty thankful for, too. I ate five of them last night

before going to bed, and in my dreams solved a geneological point in respect to my ancestry that has long bothered me. He wasn't a monkey, but a blue gorilla."

"I don't know what you mean by a Matteawan Sundae," said the Cynical Sciolist, "but——"

"Did I say a Matteawan Sundae?" said the Genial Philosopher innocently. "I beg your pardon. It was a slip of the tongue. I meant a Nut Sundae. But to get back to our muttons—that's another thing to be grateful for if you must measure your blessings on the basis of the dollar and their appeal to the stomach. If Honeydew Melons are too costly, the Nut Sundae is cheaper. If you can't afford the Nut Sundae for a dime, perhaps your craving for digestive peace and sweet content can be satisfied with what the poets call a hot-dog sandwich for a nickel. That's where the blessing of it all comes in. No matter how expensive some things may be, there is always something cheaper to be had somewhere. As a Department Store of Blessings this old Earth is unexcelled. In my youthful days they used to have what they called an *all-day sucker*, selling at two for a cent, from which any reasonable human being of ordinary suction-power could extract a steady stream of unalloyed bliss for twenty-four hours, or, if he worked on the thing for one eight-hour shift per day, for three solid days. My idea of Heaven used to be a Harp, a Halo, and an *all-day sucker* ever ready for my need. Why not then revert to these simpler ideas of our childhood days, and instead of complaining that we have *nothing* to be thankful for, marvel that we have so *much*?"

"THEN, too, it occurs to me to say that if you will look into it some time when you have nothing else to do you will find that there are other blessings than those of the Delicatessen Shop and the Gastronomical Observatory. There are all sort of beautiful things in the world that appeal to the other senses, and that are well worth being glad about. Sunsets, for instance. I can't afford to hang a Whistler, or a Corot, or a Turner, upon my walls, but it's a mighty poor year that doesn't grant me a hundred and eighty-two or three magnificent spreads of line and glowing color over on the western horizon as the sun sinks low, free gratis for nothing; and if these are not enough to satisfy my longing for the perfect picture, if I get up early enough in the morning I can count on a hundred and eighty-two or three more watching the old ball coming back. Besides these, there are the stars on summer nights, and the raging storms on the sea, and the Smart Set walking on the Avenue,

to contribute to my love of beauty, grandeur, or farce-comedy according to my mood, and for all of which I am deeply grateful. Then the sounds to satisfy our love of music—the birds singing in the parks, the everlasting grind of the hurdy-gurdy man, the lyric laughter of a happy child at play, the majestic roaring of the winds, the ceaseless hum of the whirring wheels of industry——"

"The endless buzz of the swirling wheels in your own head," twinkled the Cynical Sciolist.

"PRECISELY," said the Genial Philosopher. "Constantly grinding out sheaves of wisdom. I could not ever cease to be grateful for them, and I think you would be happier yourself, my dear Sinnick, if you possess a similarly equipped cerebral garage of your own. But again to return to our chops, there are even yet still other things to be glad about and grateful for, on the merely negative side of the blessing account. It sometimes seems to me as if the most marvelous blessings that come to us lie in the absence of things that afflict. Some philosopher has defined pleasure as *the absence of pain*. Why can't we similarly define a blessing as *the absence of blight*? When the stock market runs amuck, I am thankful that I haven't any stocks and bonds to worry about. When my cook gets mad about nothing at all and leaves me without notice on the eve of a dinner-party, I thank Heaven that a woman who would do that sort of thing is no longer a member of my domestic menagerie. When my tax bill comes to \$177.88, I thank the Lord that it isn't \$304.57. If my Candidate for President is beaten by 400,000 majority, I am grateful for the realization that there were 8,000,000 other voters in the country who thought, and voted, as I did. If a book I read is dull, I rejoice that I didn't write it myself. And so it runs on. There isn't a wo in the world that hasn't some negative obverse of joy to it, and when Thanksgiving Day comes round year after year, and I tot up the score, I find that the break betwixt smiles and tears is about even, and that the tears as often as not have some measure of sweetness in them for which my heart stirs in gratitude. And then I think of that wise old boy Seneca, who remarked—'If I only have the will to be grateful, I am so.'

"A riming friend of mine once put it fairly well in a little thing he turned out one night with his left hand——

'When all about me rush like mad.

And push and shove in wild abandon.

Amid the turmoil I am glad

That I've two sturdy legs to stand on;

And if, caught in that frenzied smash,

They overturn me as they fly on,

I thank the Lord as down I crash

'That I've at least my back to lie on.'"

J U S T A W O R D

Have you noticed that dinner pails aren't being carried this season—and haven't been for several seasons past? There's a reason; not fashion, nor food fads, nor an anti-bundle-carrying campaign, but a real explanation that you'll be interested to read about in Mary Alden Hopkins' article, "The Disappearance of the Dinner-Pail," soon to be published in The Independent.

David Wark Griffith, the man who first developed the possibilities of "the master movies" in "The Birth of a Nation," and whose later production "Intolerance" is an even greater achievement in spectacular filming, thinks that "survival of the fittest" is a fair explanation of the increasing popularity of movies at the expense of "the legitimate." His ideas and ideals of the movies, based on experience both as an actor and as a motion picture director, will be published in an early issue of The Independent.

' ' T A N K ' ' T A C T I C S

The British "tanks" continue to supply material for the graphic stories of the fighting on the Somme. The following account, published in the *New York Sun*, was written by the man behind the machine gun in one of the land battleships:

Thru my loophole I saw the undulating fields, which were ploughed up by guns of every caliber. One needed sea legs to avoid knocking against the sides of the car case of steel which waddled along over ruts and uneven places. Our tank gripped the soil and stuck to it, gliding along like a centipede. We moved onward while the cheers of our infantry reached our ears despite the fearful din.

As we advanced the earth in our path was ploughed up and thrown aside. Our "tank" rolled down a slope and exploded a mine breaking thru. That done we went on calmly.

There was a heavy thud and then a flash overhead. Our "tank" trembled from top to bottom and stopped in an eighth of a second. Thousands of "tack tacks" reached on the steel sides of the tank, sounding like myriad hailstones beating on window panes. The German guns had opened on us, but their shots were wasted. They

had as much effect as pellets of bread against a wall.

I distinguished sandbags heaped up and a wall pierced with holes. Little white flakes came from these holes. These were the enemy's guns. Our "tank" advanced steadily. We cleared a ditch, scaled an incline and passed over a heap of rubbish from a demolished house.

Then came the first barbed wire entanglements. The "tank" didn't even make an effort. Everything was broken, crushed, upturned. I had the sensation of being in the interior of a gigantic iron wedge which went cutting thru something like butter. The "tank's" nose scattered the sand and cement bags.

There was another violent shock. We went straight thru the wall. Grenades burst on our armor. We were in the midst of a nest. Suddenly German heads appeared on both sides of us. Now it was my turn. Our machine guns crackled and bullets whistled in the German trenches. Taken thus the Germans were in the greatest disorder. They threw themselves flat on their stomachs or raised their arms to heaven. Some tried to run away.

Then a whistle sounded in the "tank." It stopped. Wild cheers came and soon we saw the uniforms of our boys who were taking possession of the nest and gathering everything living which remained.

REMARKABLE REMARKS

CLEVELAND MOFFETT—Eat whatever you desire.

WOODROW WILSON—My first thought is, "will it work?"

GENERAL VON LUDENDORF—No way but war leads to peace.

JAMES MONTGOMERY FLAGG—I also like to be kept on the map.

OTTO H. KAHN—Maecenas are needed for the operatic stage.

JOHN LUTHER LONG—No nation can subsist upon ideals alone.

CHAUNCEY M. DEPEW—One veteran is worth a company of recruits.

BOOTH TARKINGTON—The Republican party needed a lesson and got it.

FREDERICK PALMER—The Crown Prince of Germany has lost his popularity.

W. L. GEORGE—I doubt whether any mental power is inherent in sex.

GEORGE BERNARD SHAW—The medical profession has an infamous character.

REV. CHARLES A. EATON—People in this country don't think. They use canned opinions.

HEALTH COMMISSIONER ROBERTSON—I once fed my family of eight for five days for \$3.81.

SYDNEY BROOKS—New York I should say reached its greatest height of power in 1896. Since then its power has steadily waned.

MRS. CARTER W. HARRISON—Thirty minutes is a good average time for dressing in the morning—just to dress in twenty minutes is fast time.

CHARLES M. SCHWAB—To the extent that things worth while are given to us in this world we must give back to the world a return in service.

BISHOP H. C. STUNZ—There are Sunday schools where the children are not taught the teachings of Jesus but receive instruction in Voltaire instead.

CRITIC W. C. BROWNELL—We are constantly assisting at the bath of beauty of lady novelists to whom the process must seem less sensational than to us.

VICE-PRESIDENT MARSHALL—It is to be hoped that Mr. Roosevelt will keep his promise to make no suggestions to the President during the next four years.

ANDREW CARNEGIE—I have required that no matter what a young man or woman thinks about the future life or any dogmas, my money must not shut the door of any college or university to such an applicant.

STERLING

*A Gift of Gorham Silverware  
This Christmas is in itself a Recipe for Happiness*

HAPPINESS GOES OUT FROM THE HEART BEFORE IT COMES IN & IT NEVER BY ANY CHANCE STAYS AT HOME & YOU CAN HARVEST IT FOR THE COMMON GOOD, BUT YOU CANNOT STORE IT FOR YOUR SOLE INDIVIDUAL USE & YOU CAN LEND IT BUT YOU CANNOT BORROW IT, YOU CAN EARN IT BUT YOU CANNOT BUY IT, YOU CAN SPEND IT BUT YOU CANNOT ACCUMULATE IT & A MAN MUST CONTRIBUTE TO THE STOCK OF HUMAN JOYS BEFORE HE CAN PARTICIPATE IN ITS PROFITS & TO SEEK HAPPINESS WITHOUT GIVING IT IS A FUTILE QUEST, AND ALL OUR LONGINGS FOR WHAT WE HAVE NOT LEARNED TO GIVE TO OTHERS ARE AS EMPTY BOTTLES IN THE WINE CELLAR OF THE SOUL & HAPPINESS REALLY NEVER WAS ANY GOOD IN THIS WORLD BUT TO GIVE AWAY & & &

Supreme among Christmas  
Gifts is a piece of Silver-  
ware trade-marked —

Sold by leading jewelers everywhere.

A Journal of Civilization

THE PREMIER OF CANADA

The Right Hon. Sir Robert Borden, Premier of the Dominion of Canada, in a recent visit to New York received the unique distinction of Honorary Life Membership in the Lawyers' Club, and was entertained at a dinner given by Hon. John A. Stewart, Hon. Robert Bacon, Hon. William Allen Butler, and others at the Plaza, and by the Canadian Club. He expressed his country's determination to maintain the cause of the Allies to the end.

## EUROPE'S SUICIDE

**T**HE third summer campaign is over and the Great War settled down into its third winter with no issue determined and no end in sight. All the belligerents are making their preparations for a fourth year, but with no assurance that there will not be a fifth to follow.

The questions involved in the war have long ago been overshadowed by the war itself. There is only one live question and that is when and how the war may be stopped. We no longer talk of which will win in the war because we know that all have lost. No matter how it comes out there can be no victor, for all were vanquished long ago. The accumulated wealth of centuries has been swept away as by a tornado and the labor of the future has been mortgaged so the coming generations will be born to an inheritance of poverty. No conceivable indemnities or accessions of territory can possibly compensate either side for the destruction of property, and Europe can never recover from the loss of ten millions of her ablest men.

In the face of such unparalleled devastation it is absurd and wicked to talk of net gains and ultimate advantages. Such talk reduced to concrete terms means that a man who has come out of it safe goes to a widow whose husband and sons have been killed and says: "I'm sorry for you personally, but on the whole the war has been a good thing. I feel quite a spiritual uplift in myself and my employees work much harder." Shall he be allowed to say to a blinded soldier: "Lucky thing

this war was; I can see much more clearly than before?" The survivors might at least have the decency not to insult the dead and wounded by talking of how the war has benefited them.

It is not true that America is rejoicing at the sight of the self-immolation of Europe. The prices of munition stocks may go up whenever one side or the other rejects our overtures for peace, but the hearts of the American people go down. The United States is not a gainer by the war. She is merely less of a sufferer. The future is full of foreboding, for we are bound to ask ourselves, Can America survive if European civilization is destroyed?

All Europe is our Fatherland, not any one nation of it. We have drawn our life from every land and each one has contributed some element to our commonweal. We cannot rejoice wholeheartedly in any victory, for it means to us a blow to some country to which we owe a debt of gratitude for something, for help in times of danger past, for political institutions, for religious forms, for language or laws, for books or music, for art or science, for the ideals, inspiration, influences and counsel that have enabled this new nation to rival the old. To us Americans it seems that our Mother Europe is committing hara-kiri before our very eyes, driving the sword deeper into her vitals as the blood pours forth in red rivers—and we stand helpless by, for she will not permit us to stanch her wounds or take away her weapon.

## WHAT CAN WE DO?

**F**LOUR today costs \$10.50 a barrel. Three years ago it cost \$5 a barrel. Sugar has risen to 8¾ cents a pound. Milk today costs 12 cents a quart. Only a few years ago it cost 8 cents. Collars have gone up from 12½ cents to 15 cents. Coal has gone up, and shoes, and meat, and corn meal, and potatoes, and apples, and cabbages, and kerosene, and underwear, and overcoats, and stockings, and—everything.

What are we going to do about it? What *can* we do about it?

We cannot answer these two questions until we have found out what the causes are for the upward rush of prices. Perhaps not even then.

Prices have gone up so scandalously for three main reasons.

First, because of the general upward trend that has been going on year after year. The high cost of living was a problem before the war; war has only transformed it from an annoyance into a menace. The cause of it even in the days before August, 1914, was a subject of keen disputation. Unquestionably the increasing production of gold was an important factor, for gold, like any other commodity, obeys the law of supply and demand. When gold is plentiful it becomes cheap, and other commodities, relatively considered, become dear. But how this effect upon prices of the steadily increasing production of gold is to be counteracted is a question that economists touch gingerly. Perhaps the true answer is that it cannot or need not be counteracted; that the problem of adjusting income and outgo for the individual is to be solved in some other way.

The second reason for the upward trend is human acquisitiveness. Men will try to get as high prices as possible for what they have to sell. When supplies are low and demand great, they will "hang on for a rise." This is not necessarily wicked; it is merely human. So long as the world's business is left to be governed by the law of supply and demand, why should not men take advantage of it when it goes their way; especially since they are compelled to suffer when the law goes against them.

In Chicago the other day, before an investigating committee, a dealer boldly admitted that he had millions of eggs in storage and meant to keep them there until he could get the highest possible price for them. He added in effect, "What are you going to do about it?"

It is a pertinent question. That something should be done about it is indisputable. The twentieth century does not recognize the right of the individual to do what he will with his own, when his will is to exploit the public for illegitimate gain. The general welfare is paramount. The man who takes unfair advantage of a shortened food supply to fatten his own crib is an enemy to society. The community should deal with him. Especially it should take away from him the power of exploitation. It should make the hoarding of food, the cornering of the market impossible.

The third reason for the rocketing of prices is the war. War increases demand and decreases supply; therefore prices go up. The warring nations—such of them as can get at us—demand more and more of our products, and at any prices that they have to pay. The things we send abroad we cannot sell to ourselves at home; the

home supply decreases, the home demand stands steady, and prices go up. It is a simple problem in fractions: Demand divided by supply equals price; increase the numerator of the fraction and the quotient—the price—grows larger; increase the denominator and the quotient grows smaller. And there you are.

A simple solution for this aspect of the problem has been proposed. It contemplates the placing of an embargo upon foodstuffs, thus preventing their export from the country. It would doubtless be efficacious. It would mean decreasing the numerator of the fraction by cutting down the demand. As a result of such an action prices ought to fall. The solution looks attractive; but is that all there is to the matter?

There are two strong arguments against the embargo plan. The first is that it would involve a violation of our cherished neutrality. It would strike a serious blow at the Allied nations. It would throw a considerable weight into the scale on the side of the Teutonic powers. To put an embargo on foodstuffs would be to take sides definitely with Germany and its allies.

Under present conditions we cannot export anything to Germany. The British fleet will not let us. We would if we could, for we are ready to trade with any one in the world. But we cannot pass the Allied blockade of the Central Powers in order to make delivery.

If we were to put an embargo on foodstuffs we should in effect say to England, France, Russia and Belgium: "The British Navy's superiority over the German navy gives you a great advantage in the Great War. Because of it, you are able to get food and clothing from us, while Germany is not. We shall take away this advantage by refusing to let you have the food and clothing that you want to buy from us. We shall put you on the same footing as Germany, in spite of the fact that you are now on a different footing because your navy is stronger than theirs."

Could there be a more flagrant breach of neutrality?

But that is not all. The declaration of an embargo would be abject national selfishness. It would be saving our own skins at the expense of the rest of the world. It would be shutting ourselves up with our own abounding prosperity and saying to the rest of the world, "Suffer and starve to your heart's content; we will bear no part of your burden, share no pang of your suffering. Our own comfort and fatness are our only concern. You shall have none of it to ease your sore distress."

Is this the spirit of America? Are we so steeped in selfishness and greed?

#### A SATISFACTORY BEGINNING

THERE could only be one thing worse for Mexico than the continuance of her present pitiable condition, and that is intervention by the United States. Fortunately the American-Mexican Joint Commission has not yet come to that last resort. Last week they disposed of the question that has been the chief thorn in the flesh of Carranza—the presence of the American troops on Mexican soil. The Commission proposes the conditional withdrawal of General Pershing's army across the border in forty days provided the Mexican forces replace our troops and order is maintained in northern Mexico. But the United States does not waive any rights to recross the border again in pursuit of bandits. If Carranza agrees with this the way will be paved for

taking up the fundamental problem of how to make Mexico a good neighbor. If Carranza refuses, however, the Commission will be disbanded and the whole situation will remain as it has been for the past few months, with intervention looming large on the horizon. But we do not look to see Carranza break with the United States. He will hardly be so foolish as to incur the enmity of the only friend he has who is both willing and eager to help him. All things considered, the Commission has made a satisfactory beginning.

#### THE END OF RHODES'S DREAM

CECIL RHODES was not only a man of action, but a man of vision. He foresaw the value of the African Hinterland, and the result is Rhodesia. He foresaw the possibility of a Cape-to-Cairo railroad, and that is largely completed. He foresaw the danger of the branches of the Germanic race growing apart and becoming involved in conflicts thru mutual misunderstandings, and he did his best to prevent it by bequeathing his property to found scholarships whereby picked young men from Canada, Australia, New Zealand, South Africa, United States and Germany could all be educated together at his Alma Mater, Oxford.

Until Rhodes opened Oxford with this golden key it was hard for foreigners to get in. Before then many an American student crossed the Atlantic with the intention of studying at Oxford, but, finding little opportunity for graduate work and no chance for a degree, went on to Germany, where he received a warm welcome and was given even greater privileges than German students. In consequence of getting the cold shoulder from the British universities and the glad hand from the German universities, most of our foreign educated scholars were "made in Germany." As these returned and filled up our faculties, our old English colleges were remodeled into German universities. German methods of instruction and research were adopted, and in some departmental libraries the German books outnumber the English. The Rhodes scholarships have already made a perceptible change in the atmosphere of our educational institutions, and if they had been established a generation earlier our professors would have leaned much more strongly toward the British side than they do today.

The Rhodes bequest came quite too late to bridge the widening gulf between the Anglo-Saxons and the continental Saxons and they are now in deadly conflict. The trustees of the Rhodes Estate have decided that that bridge shall never be rebuilt and they have applied to Parliament to abolish the German scholarships. Rhodes provided funds for supporting fifteen German scholars at Oxford with \$1250 a year each. This money will henceforth be utilized exclusively for British students. The House of Commons in passing the bill left the scholarships open to persons within or without the Empire, but the trustees insist that all foreigners shall be excluded. The American scholarships, however, are not disturbed.

In thus abolishing the German scholarships the trustees say that they are acting as Rhodes would have them do. That may be, but we question it. We do not believe that funds should be held in perpetuity by the dead hand, but we doubt the wisdom of such action taken in the heat of conflict. Unless this war is to be carried to extermination there will be more need than ever for

the reestablishment of a mutual understanding between British and Germans and no better way of accomplishing this has been devised than that of Rhodes's, to make young men of different nationalities live and learn together. If he had only carried his idea further and furnished funds to educate British youths in German and American universities the effect would have been greater.

### BREAKING INTO EUROPE'S GRANARY

THE capture of Craiova is one of the most startling of surprises that the Allies have had since the war began. Just when they supposed that Falkenhayn was held up by the mountain barricade on the northern border of Rumania, he makes a sudden swoop southward that carries him three-quarters of the way across the country and cuts the only railroad connecting the west with the east. The Rumanian army, which started out so gallantly three months ago to reconquer Serbia, is now separated and surrounded. Unless the new German line can be broken thru, the western part of Rumania is lost. And only two months ago, when Falkenhayn began his offensive, the Rumanians had possession of a large part of Transylvania. Now the Teutons have penetrated into Rumania four times as far as the Rumanians had then penetrated into Hungary. Such a sudden reversal of fortunes, coming at a time when the Allies supposed that the Germans had lost their power of initiative, is decidedly disconcerting.

One of the leading British authorities declared that "Germany is not capable of carrying out a complex military operation on the Rumanian side." The *London Spectator* of November 9, when the Germans were already thru the Carpathians, said:

Unless we are greatly mistaken, the "push at any price" has already ended in the Dobrudja in a tactical fiasco, and is going so to end in the Carpathians. If we are right, we wonder whether our pessimists will still have the effrontery to say that it would be better for us if Rumania had never come into the war. In our opinion, it will turn out in the end that Rumania has caused the German military authorities to do something very like ham-stringing their forces.

A week later General Brusiloff, in command of the Russian forces in Rumania, stated in an interview for the *Times*:

The recent temporary reverses of Rumania must not be considered as having the slightest significance, and the enemy's trifling advance in the Dobrudja, tho a regrettable incident, will have no bearing on the greater issues of the war. It would have been serious had the Germans been able to pierce the Carpathians and enter Rumania, but I believe that this last attempt by them to regain somewhere their initiative is doomed to perish.

Well, the Germans have pierced the Carpathians and entered Rumania, so we have it on the best authority that the situation is "serious," however it may turn out in the end.

Stanley Washburn, the *London Times* correspondent at Bucharest, telegraphed on November 2:

It now seems probable that what the enemy has been unable to accomplish hitherto he cannot accomplish now. From observation of the terrain in scores of places I cannot see how the enemy can possibly negotiate these mountains with his heavy artillery, and without it the Rumanians need fear nothing.

The same policy of belittling or concealing the German gains was pursued to the last, and on November 21 the Russian official bulletin stated that the Rumanians were retiring "to the region of Filiash." But Filiash had been

taken two days before, and the Germans were then entering Craiova, twenty miles beyond.

According to British estimates, Falkenhayn could muster at the most 200,000 men, while the Rumanians could meet them with 700,000, besides the Russian forces which were sent to help them. With odds in their favor of four or five to one, it was not unreasonable to expect the Rumanians to hold the snow-filled passes and mountain peaks of their northern frontier for at least a month. But the Germans somehow succeeded in getting their heavy artillery thru the passes even where there was no railroad and marching their troops over the mountains at an altitude of 7000 feet. On reaching the plains the invading army defeated the Rumanians on November 18 in a pitched battle, of which the dispatches coming to us thru London have made no mention. Then with cavalry they swept forward and reached Craiova, fifty miles beyond, within three days.

Whether they can hold their gains or not remains, of course, to be seen. The Rumanians may rally and, reinforced by the Russians, drive back the invaders. But, on the other hand, this display of strength on the part of the Germans and of weakness on the part of the Rumanians makes it quite conceivable that Falkenhayn, who has come down from the mountains on the north, and has joined Mackensen crossing the Danube on the south, may conquer Rumania like Serbia, Montenegro and Belgium.

If this happens the Allies will have occasion to regret that they induced Rumania to come in. For Rumania will supply just what Germany needs. Rumania is a little country, smaller than Illinois, yet it has stood next to the United States and Russia in its output of petroleum and—until Canada and Argentina developed—in its exportation of wheat. It produces enough surplus grain to give every man, woman and child in Germany a loaf of bread every day. Rumania could remount the German cavalry and provide wool enough to clothe a German army. Besides this, a conquered Rumania could be drawn upon for half a million men, some of whom could be induced—by the use of sufficient force—to join the Rumanians in the Austro-Hungarian armies, and those who would not fight could be used, like the Belgians, French and Poles, to replace fighting men in factory and field. Such are the possibilities suggested by Falkenhayn's victory.

### MOBILIZING THE ARMY OF AUTHORS

A CURIOUS change has come over the reports of the war. At the beginning the commanders of all the armies determined with one accord but without collusion that no correspondents were to be allowed on the firing line. Consequently the war literature was written behind the front and usually a good ways behind. Lord Kitchener was decidedly down on newspaper men, altho if it had not been for what Steevens did for him in "With Kitchener to Khartum" he might never have risen to the position of Secretary of War.

But when it was perceived that for lack of vivid descriptions of the fighting the British public was losing interest in the war and recruiting was falling off, he consented to allow one correspondent to go to the front, the "eyewitness" of last year's cablegrams, who is now known to have been Colonel Swinton who, over

the pseudonym of Ole-Luk-Oie, wrote "The Green Curve."

Kitchener's successor, Lloyd-George, realizing the power of public opinion, adopted a different policy and now we are getting real war correspondence from the best of England's writers. Kipling, the War Laureate of Great Britain, is writing a history of the Battle of Jutland in prose and verse. John Masefield has gone to Gallipoli and has written the history of that ill-fated campaign with the same vigor and verve as he did the buccaneer stories which gave him his first reputation. H. G. Wells, who has written up many imaginary wars, is now getting his first glimpse of real warfare in the Trentino. Hugh Walpole is giving us the benefit of his experiences in "The Dark Forest" of Russia. Sir Arthur Conan Doyle has made "A Visit to Three Fronts." It seems as if an order had gone forth to the authors of England to fix pens and charge, tho doubtless they use typewriters instead of pens as their comrades in arms use machine guns instead of rifles.

This change of tactics not only gives us better pictures of the war—for authorship is as much of a skilled craft as soldiering—but it is also to be commended as a movement in the direction of democracy. This is a war of the people and the people have a right to know what is being done by and for themselves in various parts of the world. In days of old the bards and skalds went to the front to inspire the soldiers and to record their deeds of heroism. Now when fighting is again a community affair and not a job delegated to a few professionals we see a return to the good old custom.

### THE Y. M. C. A. MAUPASSANT

IT is the business of an academy to be academic, so it was to be expected the American Academy of Arts and Letters meeting in New York should devote the leading paper of the session of November 17 to "Standards." William Crary Brownell was the chosen champion of literary orthodoxy and no better could have been found, for his witty thrusts at the fads of the day and the crudity of American taste were enjoyed even by those of his audience who had been guilty of what he condemned. His point of view may be seen by what he said of O. Henry:

New discoveries in life are hardly to be expected of those who take its portrayal so lightly as to neglect its existing maps and charts. And this is why our current fiction seems so experimental, so speculative, so amateur in its portrayal of life, why it seems so immature in one word, compared grade for grade with that of Europe. . . . Why should we bracket O. Henry's immensely clever "expanded anecdotes," as Mrs. Gerould calls them, with the incisive cameos carved out of the very substance of life taken seriously, however limitedly, of a consummate artist like Maupassant?

It is interesting to note that this bracketing was as odious to the American writer as it was to the admirer of Maupassant. Professor Alphonso Smith in his recent biography quotes O. Henry as saying: "I have been called the American De Maupassant. Well, I never wrote a filthy word in my life and I don't like to be compared to a filthy writer."

Now O. Henry had as intimate a knowledge of "life"—using the word in its common sense of low life—as Maupassant. He had been the companion of tramps and cowboys. He had lived with convicted crooks in prison and with fugitives from justice in Central America. The

back room of a Southern drugstore and the bunk-house of a Texas sheep ranch must have given him abundant opportunities of acquiring the sort of stories that Maupassant most delighted in telling.

Why did not he use it? There is a wide market for such stuff even in America, as certain magazines have proved. Even those to whom it was repugnant would still have read his stories for their literary value as they read Maupassant.

The answer is that O. Henry had "standards" of his own altho they were different from the standards extolled by our Academic critic. That adherence to the American standard in distinction from the French does not fatally interfere with literary genius is proved by Mr. Brownell, for the one living American whom he picks out as "perfectly comparable" with his European coevals is Howells, who is a match for O. Henry in purity of word and thought. It is well to be reminded of the importance of "standards." It is also well to remember that the word is plural.

### THE EIGHT-HOUR DAY GOES TO COURT

THE railroads eight-hour is to go promptly to the United States Supreme Court for a decision as to its constitutionality. A short cut thru the usual mazes of court procedure has been made possible by the consent of both parties to the legal aspect of the question, the railroads and the government. The workers do not appear as parties in the legal controversy; the government stands as their champion since their position has been embodied in law.

What the court will decide no one, not even the court, yet knows. We have no idea what it ought to decide, from a legal point of view. But from every other point of view an affirmation by the court of the eight-hour law's constitutionality would be eminently desirable.

We deplore, as we have stated before with vigor, the way in which the eight-hour law was passed. We deeply regretted to see the President and the Congress legislate under compulsion.

But it would be even more deplorable to have it established by the Supreme Court of the United States that the nation has not the power to decree an eight-hour day in a great public industry, if the best judgment of the nation seems to definitely demand such legislation.

The world moves toward the eight-hour day in industry. The movement is a part of its general progress toward the humanization of industry. Any such insurmountable obstacle along the path as a constitutional prohibition would be a calamity.

While the Supreme Court is mulling over the legal side of the question, another aspect of it should engage the first attention of the President and Congress. They have demanded a new measure of justice from the railroads for the workers. It is almost inevitable that a fuller measure of justice must be due to the railroads from the people. The eight-hour day will naturally cost the railroads more. How are they to pay the bill? The whole question of railroad rates will need reëxamination. The President and Congress must see that it gets it. Indeed, the President promised such a reëxamination when he urged the passage of the law.

# THE STORY OF THE WEEK

## THE GREAT WAR

**November 20**—German Foreign Minister Von Jagow resigns. Russian dreadnought "Imperatritsa Maria" burned in Black Sea. Hospital ship "Britannic" sunk by mine in Mediterranean.

**November 21**—Emperor Francis Joseph of Austria dies. Falkenhayn takes Craiova, Rumania.

**November 22**—Allies forced Teutonic embassies to leave Greece. Serbs pursue Bulgars beyond Monastir.

**November 23**—British hospital ship "Braemar Castle" sunk in Mediterranean. Teutons take Orsova on Danube.

**November 24**—Trepoff succeeds Stirmer as Russian Premier. German destroyers attack British coast near Ramsgate.

**November 25**—Mackensen crosses Danube into Rumania. Alfred Zimmermann becomes German Foreign Minister.

**November 26**—Invading forces from north and south meet in Rumania.

**Death of the Austrian Emperor** The Emperor Francis Joseph died at nine o'clock in the evening of November 21 at Schönbrunn Palace, near Vienna. He had for several days been suffering from a cold, but in spite of this and his eighty-six years he had attended to his state duties with his customary diligence early every morning, even up to the day of his death. In the afternoon pneumonia developed in the right lung and he sank rapidly. His daughters, the Archduchess Marie Valerie and the Princess Gisela of Bavaria, the Archdukes Charles Francis Joseph and Frederick, and other members of the imperial household were present at the deathbed. After the funeral the body will be taken to the Hofburg Augustiner Chapel, where it will for two days be viewed by the public.

The deceased monarch had one of the longest and most eventful reigns of all history—sixty-eight years. He was born August 18, 1830, and ascended the throne in the revolutionary year of 1848. Hungary was in revolt under Kossuth, and the young emperor was unable to overthrow the Hungarian republic until the Czar sent an army of 80,000 men to his aid. In 1866 he was defeated by Germany and lost Venice to Italy. But in the following year he secured the support of the Hungarians by being crowned Apostolic King of Hungary, and henceforth was able to keep his heterogeneous dominions together by skilfully playing off one nationality against another and so maintaining a virtual absolutism in a constitutional guise.

He was most unhappy in his family relations, for the history of the Hapsburgs was a succession of scandals, crimes and fatalities. Three attempts were made to assassinate him and he

narrowly escaped. The Empress Elizabeth, who had parted from him and was living in Geneva, was killed by an Italian anarchist. His brother, Maximilian, who had been made Emperor of Mexico by Napoleon III, was overthrown thru the influence of the United States and was shot by the Mexicans. His son, the Crown Prince Rudolph, who was married to Princess Stephanie of Belgium, was found shot dead in his hunting lodge beside the body of the Baroness Marie Vetsera, whether murder or suicide was never known. His nephew, the Archduke Johann, ran away and has never been heard from since. His sister-in-law, the Duchess d'Alençon, was burned in the charity bazar fire at Paris. His daughter, the Princess Elizabeth, shot the mistress of her husband, Prince Otto, at Prague. The final and worst of his family misfortunes was the assassination of his nephew and heir, the Archduke Francis Ferdinand, and his morganatic wife, the Duchess of Hohenlohe, at Serajevo, June 28, 1914, by a Serbian fanatic. This brought on the Great War, and as the aged ruler dies his realm is threatened with destruction by the enemies which surround it on every side.

### The New Emperor of Austria

Owing to the assassination of the Archduke Francis Ferdinand, nephew of the late Emperor Francis Joseph, his successor is his grandnephew, the Archduke Charles Francis Joseph, who will be crowned as Charles I, Emperor of Austria and Charles IV, King of Hungary. He is now twenty-nine years old and has been trained with a view to ultimately succeeding to the throne, for the children of the late heir apparent, Francis Ferdinand, could not

inherit it because of his morganatic marriage. The new sovereign speaks both Hungarian and German, as well as English and other languages. He is said to be of a democratic disposition, and at any rate the fact that he was sent to the public schools of Vienna must have given him a better chance to know the people than most sovereigns have. He has been in nominal command of one of the Austrian armies during the war, but whether he is to be held responsible for the poor showing of the Austrian troops or is to be credited with their only brilliant exploit, the invasion of Italy from the Trentino, no one can say.

It is interesting to note that his wife, the Princess Zita of Parma, was born in Italy and educated by French nuns in a convent on the Isle of Wight. To the American Ambassador, Mr. Penfield, who complimented the new sovereign on his excellent English, he said:

Mr. Ambassador, it was this way. I was very much in love with Princess Zita of Parma, who was pursuing a course of study in a convent on the Isle of Wight, England. My governess had first taught me English, but when I went to the Isle of Wight to court Princess Zita I added rapidly to my knowledge, and you pay her and me a great compliment when you say I speak English perfectly. I stayed six months on the Isle of Wight and learned more each day.

The late Emperor Francis Joseph objected strongly to his marrying the Princess Zita, but became reconciled to the match after he came to know her. She is of Bourbon descent and her two brothers, Prince Xavier and Prince Sixte, are serving in the Belgian ambulance corps and have been decorated for bravery by the President of France. They were not allowed to serve under the French flag because

### THE KING AS SOLDIER

King Ferdinand of Rumania and the Crown Prince Charles are in the real fighting with their troops, now retreating before the German advance toward Bucharest.

American Press

#### THE FIRST JAPANESE WAR NURSES IN EUROPE

They were decorated by the French and English governments, and received with military honors on their return to Tokyo. Several companies of Japanese nurses have gone to the front now

French law prohibits any one of royal blood from entering the army. The fact that the new emperor and empress have these associations with Italy, France, Belgium and England naturally gives rise to speculation as to whether they will not be disposed to concede acceptable terms of peace with the Allies.

**Falkenhayn's Invasion** The passage of the Transylvanian Alps and the dash over the Rumanian plains by the Austro-German troops under General von Falkenhayn is one of the most remarkable feats of the war. Falkenhayn's order to the Ninth Army congratulating them on this achievement is grandiloquent but not altogether undeserved:

For weeks you were forced to fight on ice bound, rocky heights and in deep, snow covered valleys, usually without shelter from gunfire and often cut off for many days from all communications. But not one of you failed. Wherever the enemy was to be held, he was bound with an iron grip; where he had to be crushed, he was pulverized; where he had to be beaten, he was struck to the heart.

The Teutonic forces now hold all of the mountain passes including those of the Carpathians to the north which the Russians were defending but the main invasion was carried out by way of Vulcan Pass thru which the Rumanians two months ago had entered Hungary and taken Petroseny. After being driven out of Vulcan Pass the Rumanians gathered all their available forces in front of the invaders fifteen miles south of the pass, but were routed in a battle lasting two days. The German cavalry then rushed down the valley of the Jiu River to Craiova, the junction of all the railroads in western Rumania and the seat of the munition factories. Here, too, were stored immense quantities of grain and other produce of last year's harvest which the Rumanians were unable to export owing to the closing of the Dardanelles. The Germans claim to have secured these coveted supplies as well as three hundred cars at Craiova but the Rumanians assert that they burned the stores before evacuating the city. The Rumanians also state that they have

burned their villages and harvests as they retreated toward Bucharest, thus leaving to the invaders a wasted land and an empty victory.

The Rumanians after their defeat on the Jiu retired to the next river, the Alt, thirty miles east, and here they are trying to make a stand with their center at Slatina. But they are outflanked on both ends for Falkenhayn's forces have entered thru the Rotenturm and Predeal passes on the north and Mackensen's forces crossing the Danube on the south are both behind the Alt River.

**Rumania Cut in Two** Again the famous "nut-cracker strategy" of the Germans has scored a victory. Rumania is being crushed as Poland and Serbia were by armies closing in from opposite sides. While Falkenhayn has been forcing his way thru the passes in the mountains north of Rumania, little has been heard of Mackensen, who was on the southern side of the Danube. It was indeed reported in the Allied despatches that he had been routed in the Dobrudja and had lost a third of his men. But as we pointed out it was not probable that he would attempt to invade Rumania from the Dobrudja even if the Chernavoda bridge had remained intact when he could cross the Danube south of Bucharest, only a third the distance from that city. This is what has taken place. The river was crost at two places southwest of Bucharest which brought the Danube army between the capital and the Alt River, where the Rumanians had hoped to make a stand. Altho the Danube was unusually high, owing to a thaw, Mackensen seems to have had no difficulty in bringing troops across from the Bulgarian to the Rumanian shore. The Austro-Hungarian Danube flotilla and the Imperial Motorboat Corps effected the crossing. Once across, the Bulgarian and German forces advanced rapidly northward into the interior, and soon met the cavalry of Falkenhayn, which had come south thru the mountains.

It was hoped by the Allies that the Rumanians in the extreme West, even

tho cut off, might hold Orsova and the Iron Gates, but they did not. Orsova, which is a Hungarian town just over the border, promptly surrendered, so the Rumanians have lost all of the Hungarian territory that they gained in the first month after entering the war. This gives the Teutons complete control of the Danube for 350 miles, from Orsova to Chernavoda, and they will be able to send troops down the river and land them in Rumania anywhere they choose on this line. The significance of the German victory is discussed in our editorial pages.

**Greece Refuses to Surrender Arms** Another ultimatum has been served upon Greece by the Allies making four new demands. One was that the diplomatic representatives of the Central Powers be expelled from Greece. Admiral du Fournet, commander in chief of the Allied forces in Greece, sent peremptory notices to the German, Austrian, Bulgarian and Turkish legations that the ministers and their staffs must leave the country within forty-eight hours. Since the King of the Greeks was not in a position to afford them protection the ministers were obliged to obey the command and departed within the specified time by ship to Kavala, now held by the Bulgars.

The Allied authorities also demanded that the Greek officers who had been jailed for attempted desertion because they wished to join the rebels under Venizelos should be released. The king complied and issued a decree accepting the resignations of the imprisoned officers and permitting them to enlist under the Provisional Government at Salonica. This government consists of a triumvirate with ex-Premier Venizelos at the head and its purpose is stated to be not the overthrow of the king but to make war on the Bulgars. But the first move of the Venizelist forces was to march southward along the Gulf of Salonica in order to drive the royalist troops out of Macedonia. At Katerina the two Greek armies came into conflict, but the French intervened on the side of the insurgents and demanded

#### BETWEEN THE JAWS

Falkenhayn's forces have come thru the mountains to Craiova and Mackensen's forces have crost the Danube west of Ruchuk and advanced within forty-five miles of Bucharest. The Rumanians have lost Orsova but are trying to make a stand at Slatina and Pitesti.

11 420, Florence

## THE BLACK HAND OF EUROPE

the retirement of the royalists. The royalists refused to obey the order but French troops have occupied the strip between the opposing forces. The Greek Government has formally protested against the French occupation of Greek territory.

Some time ago the Allied Powers forced the king to demobilize the Greek army. Now they demand that it be disarmed as well and the arms turned over to them. Admiral du Fournet specifies the surrender to him of eighteen field batteries and sixteen mountain batteries with 1000 shells for each, 40,000 Mannlichers with 220 cartridges each, 140 machine guns with ammunition and fifty motor vans. The Greek Government has refused to comply with this demand on the ground that it would be a flagrant violation of neutrality to take the weapons from its own soldiers and turn them over to one of the belligerents and that public opinion would not allow Greece to be so rendered helpless to defend her vital interests. That such compliance would arouse popular opposition is shown by the anti-Ally demonstrations in Athens. Because the students took an active part in these the university has been closed. The reason alleged by the Allies for their demand is that the Bulgars seized Greek munitions when they entered Macedonia and that the rest of the Greek munitions should be turned over to them in compensation.

## The Advance Into Serbia

The Bulgars and Germans, after their evacuation of Monastir, withdrew to the hills a few miles north of the city. They will doubtless exert all their efforts to hold this position and to defend Prilep, which is situated in the mountains thirty miles northeast of Monastir, because if Prilep is taken it will give the Allies a side-entrance into the valley of the Vardar River, which leads into the heart of Serbia. The main object of General Sarrail is presumably not so much the reconquest of Serbia as it is to draw to this front a larger force of German and Bulgar troops so as to relieve the pressure upon Rumania until reinforcements from Russia can be brought to release Rumania from her present critical position. But the Germans certainly, and the Bulgars probably,

would rather lose part of their recent acquisitions in the Monastir region, than relinquish their present chance of overrunning Rumania. The fact that they did not send any troops to assist the garrison at Monastir, when the fall of that city was impending, indicates that they regard the Rumanian campaign as more important than the Serbian.

The Germans and Bulgars, in their new positions beyond Monastir, are being attacked from the east by the Serbs, from the south by the French and Russians, and from the west by the Italians. This last contingent crossed Albania from the port of Avlona to Lake Ochrida, a distance of eighty miles, thru a mountainous country where roads are few and poor. The British press has expressed some annoyance at the Italians because instead of going to the defense of Serbia and Montenegro they confined their activity in the Balkans to occupying Avlona and clearing out the Greeks from the southern part of Albania, probably with a view to annexing this region after the war. But Greece lays claim to it because it is largely settled by Greeks or semi-Greeks, and taking advantage of the general confusion Greek troops quietly occupied the converted territory. The action of the Italians in dispossessing them increased the alienation of the Greeks from the Allies.

## A New Régime in Russia

The displacement of Boris Stürmer as Premier and Foreign Minister seems to indicate a change of policy and a triumph for popular government. Very little is allowed to transpire as to the causes of the overthrow of the cabinet, but it is known that the leader of the Constitutional Democrats, Professor Paul N. Miliukoff, formerly of the University of Chicago, made a bold speech in the Duma denouncing the replacement of Sazonoff by Stürmer as disloyalty to the Entente Alliance and accusing the latter of designing to conclude a separate peace with Germany. For this attack

## HIS DAILY PROMENADE

London wonders why the neutrals stand for continued submarine attacks

Professor Miliukoff was threatened with proceedings by the government, but the Duma stood by him and the premier resigned, the first time in the history of Russia that the national assembly has been able to exert such an influence. The late premier was a reactionary bureaucrat, and was suspected of being pro-German from his descent.

His successor, Alexander Trepoff, is also supposed to be reactionary, as he is the son of the Governor-General of Petrograd who was assassinated because of his intolerable tyranny. He has been Minister of Ways and Communications. The post of Minister of Foreign Affairs is filled by the promotion of Assistant Minister Neratoff.

## American International Issues

One of the problems which Congress will have to face when it reassembles is the question of an embargo on foodstuffs. A measure to this effect will undoubtedly be introduced and receive the support of several representatives of urban constituencies. The administration will probably oppose it on the ground that it would be unjust to the farmer and injurious to trade. There is also the international aspect to be considered. Since Germany and her allies are already virtually shut off from any importation of food from this country, a food embargo would be an injury only to the Entente Powers and perhaps a few neutral states. Thus an embargo would have its effect upon the fortunes of the war and would therefore win for us the lasting resentment of the Entente Allies, who would not be slow in taking measures of retaliation. Domestic questions aside, the United States Government will not wish to take positive action to help Germany win the war, especially while the submarine issue is still unsettled.

The propaganda of the League to Enforce Peace has received new impetus from the favorable expressions of opinion from many of the world's most influential statesmen. At a banquet where ex-President Taft, Jacob Schiff, Hamilton Holt and other prominent men were speakers, telegrams were read from several foreign diplo-

ments. Viscount Bryce sent a message of "heartiest sympathy with and best wishes for your league's efforts." Viscount Grey, the British Minister for Foreign Affairs, expressed his "sincere desire to see a league of nations formed and made effective to secure the future peace of the world after this war is over." Aristide Briand, the French Premier, also sent a message of sympathy couched in somewhat more general terms. Count Bernstorff, the German Ambassador to this country, sent a letter citing a speech made by Bethmann-Hollweg, Chancellor of the German Empire. The Chancellor admitted that he had some doubts "whether peace could be permanently guaranteed by such international organizations as arbitration courts," but added that "Germany will honestly cooperate in the examination of every endeavor to find a practical solution of the question, and will collaborate to make its realization possible."

**Our Agreement With Mexico** The Mexican-American Joint Commission has taken a recess after reaching a tentative agreement which will probably be made final if it receives the approval of First Chief Carranza. For many days the Mexican delegates, especially Luis Cabrera, have obstructed the attempt of the Americans to arrive at an agreement which would permit the sending of a punitive expedition into Mexico in case of renewed border raids. The Government of the United States insisted upon such a provision, believing that if the present army of occupation should be withdrawn and the safety of the border entrusted, as the Mexican delegates proposed, to garrisons of the two nations, each guarding its own side of the frontier, the Carranza forces might prove too weak to prevent bandit attacks across the American frontier. On November 24 the deadlock was ended and the commission formulated a compromise agreement which only awaits the ratification of the two governments to come into effect. The text of the protocol has not as yet been made public, but it is known to provide for the withdrawal of General Pershing's army from Mexican soil within forty days after the agreement has been ratified. If new raids should occur in the meantime the operation of this provision will be suspended. Each army will patrol its own side of the border, but no special arrangement was made for establishing a neutral border zone which the armies of either nation might use for police purposes.

The United States reserves the right to send an army into Mexico to capture bandits who have invaded American territory. Further questions of claims for damages on the part of either government and plans for the sanitary and economic regeneration of Mexico are left to future diplomatic action.

After the signing of the agreement, Secretary Lane, chief of the American members of the commission, issued a

public statement expressing the desire of this country to help Mexico become a free and prosperous nation "if she can understand that we mean to be friends." He spoke of the sympathy which Americans felt for the principles actuating the Constitutionalists and ventured the opinion that Carranza was a strong man and should be afforded every chance to make good as leader of the Mexican people. He mentioned the conciliatory action of the Mexican Government in decreasing the new export taxes on minerals and bullion and postponing the date when mining operations must be resumed to prevent forfeiture as evidence of a new spirit of conciliation actuating the foreign policy of the Mexican Government. Carranza insists, however, that foreign corporations and stock companies doing business in Mexico must waive any right of protection enjoyed as citizens or subjects of any government but the Mexican.

**CHAMPION WOMAN AVIATOR** Miss Ruth Law, holder of the altitude record for women, broke Victor Carlstrom's non-stop distance record by a continuous flight of 599 miles, from Chicago to Hornell, New York.

**The Battle of Chihuahua** Just as the Mexican delegates to the Mexican-American Joint Commission were entering into an agreement with the United States for the removal of American troops because they were no longer needed on Mexican soil, Villa was attacking Chihuahua City and threatening to overthrow the supremacy of the Carranza government throughout the whole northern part of the country. If Villa should come to dominate the state of Chihuahua it would not necessarily be the direct cause of the downfall of the present de facto government, since Villa has relatively few partisans in other parts of Mexico, but it would probably bring about renewed American intervention as the state of Chihuahua is on the American border. Chihuahua City is one of the most important political and military centers in northern Mexico and the insurgents are bending every effort to wrest it from the de facto government.

It is very difficult to determine the sequence of events in the siege of Chihuahua City because of the wide difference between the official reports of the Carranzista authorities and the rumors current in Juarez and El Paso based usually on the statements of refugees from the disturbed districts. The telegraph wires running northward from the city have been cut by the rebels, making it doubly difficult to understand the present situation. It appears that on November 23 Villa attacked Chihuahua City with a very considerable force, but was repulsed by General Trevino. The Carranzista authorities estimate their own losses as one general, two colonels and one hundred men. They claim that Villa left about four times that number of his followers dead on the field of battle. Early next morning the insurgent forces rallied for a second attack, but were beaten back with crushing losses owing to the superiority of the defenders in artillery. Many foreigners resident in Chihuahua City tried to leave by a train to the north, but many others were persuaded to remain on the ground that they would be safer in the city under the protection of regular Mexican troops than on a railroad train which might be raided by bandits. Nevertheless the foreigners awaited the assault with much anxiety, for Villa's policy has been to put to death all Americans and Chinese in the towns which he captures and his armies do not always spare Europeans. Villa's progress hitherto has been marked by wholesale massacre and inhuman atrocity against Mexicans suspected of loyalty to the de facto government and against aliens generally. Some two hundred Chinese are said to have been murdered between Parral and Jimenez in the last few days.

On Friday, November 25, Villa again renewed his attack. He feigned retreat to put the Carranzista authorities off their guard, moved his army around to the north and entered the suburbs of that part of the city. An assault from the north was the most dangerous blow which Villa could strike since the land

there lies more level and the artillery had been placed on the hills to another side of the town. But even after entering the city and occupying a large part of it, Villa's forces remained under fire from machine guns and the artillery and the issue of the battle remained in doubt.

The Mexican authorities claim that Villa was unable to retain the foothold he had gained in the northern suburbs of the city.

**Labor Progress** The rapidly increasing cost of living and particularly of food, has caused a general demand among the various branches of organized labor for a marked increase in wages; and the fact that there is now relatively little unemployment, and that most large industrial concerns are kept so busy handling orders that even a temporary tie-up means a heavy financial loss to the owners, has made it possible for the labor unions to extort favorable terms by the mere threat of a strike. It is hardly surprising, therefore, that nearly every day the papers report a wage increase or a shortening of hours in some part of the country. The United States Steel Corporation has granted an increase of 10 per cent to all its employees, the third increase for the year. Nearly a quarter of a million workers are affected by this increase, and over twenty million dollars are added to the annual expenses of this huge organization. Similar increases have been recently made by other concerns. The New York Consolidated Gas Company has announced the inauguration of a profit-sharing system which will add a total of about a million dollars to the wages of 17,000 employees. A 10 per cent wage increase has been made in many woolen mills in Massachusetts and neighboring states, and other textile mills have followed suit. The action of the larger corporations has had its influence upon their smaller competitors. In the steel industry, for example, the great increase of wages made by the United States Steel Corporation is being imitated by the lesser steel com-

panies. Sometimes a decrease in hours is given in lieu of an increase in wages. Thus the Standard Oil Company of California has granted an eight-hour work day to all its employees.

The American Federation of Labor, conscious of the trend of the times, has concluded that the present is an opportune moment to work for the establishment of a general eight-hour day. The Federation is convinced that the grant of the eight-hour day to the railroad employees will be a precedent for its general establishment, and so it has been meeting in conference with the four big railroad Brotherhoods, which have not hitherto been affiliated with the Federation, and warmly supporting the Adamson law. Samuel Gompers was unanimously reelected president of the American Federation of Labor. Much was said at the meetings in praise of President Wilson's stand on the eight-hour question, but his plan for preventing railroad strikes by legislation forbidding them to be called until after an official investigation was strongly denounced.

#### Adamson Law Declared Unconstitutional

On November 22, Judge Hook of the United States District Court in Kansas City gave the first decision on the constitutionality of the Adamson law, which establishes an eight-hour day as the basis for wages in the railroad services. The decision was on an injunction petition filed by the receivers for a small railroad company, the Missouri, Oklahoma & Gulf. Judge Hook upheld the contentions of the receivers, refused to dismiss the injunction petition, and declared the Adamson law contrary to the constitution and hence invalid. He admitted that he had not been allowed sufficient time to give a decision thoroly grounded upon the merits of the case, but explained that he desired to settle the immediate issue as quickly as possible in order that a test case might as soon as possible be carried to the Supreme Court for a final legal verdict. The federal administration is believed to favor using the decision on the Missouri, Ok-

lahoma & Gulf as the basis for the Supreme Court's consideration of the law, but most of the railroad companies prefer that the test case should involve one of the larger railroads. The decision of the Supreme Court, whatever it may be, upon this case will be accepted as binding in all similar cases by the railroad companies and by the national government.

Mr. Alfred P. Thom, counsel for the railway executives' advisory committee, urged before the congressional committee investigating the railroad situation the principle of exclusive federal regulation. He pointed out how much uncertainty and injustice the railroad companies had suffered from the unequal operation of the law in different states. He predicted that the railroads would require an annual increase of capital of at least \$1,250,000,000 for the next decade to keep pace with the development of commerce.

**Mr. Hughes Admits It** The Republican party has officially conceded the reelection of President Wilson, now that the official count is complete in many of the states. When a sufficient proportion of the California vote had been officially accounted for that the few remaining precincts could not by any possibility elect the Republican candidate, Chairman Willcox, of the Republican National Committee, announced that he accepted the result as conclusive and would urge no recount. Mr. Hughes sent a congratulatory telegram to the President on November 22, explaining that he had delayed his message only until he could be certain of the result in California and wishing Mr. Wilson a successful administration. The highest Wilson elector in California had a plurality of 3806; the lowest, 1227. Therefore the transfer of a few hundred popular votes from one candidate to the other would have meant a divided delegation, and had fewer than two thousand Wilson supporters voted the Republican ticket Mr. Hughes would have had the entire electoral vote of California and the presidency of the United States.

# THE CHURCHES UNITED

BY FREDERICK LYNCH, D.D.

EDITOR OF "THE CHRISTIAN WORK" AND SECRETARY OF THE CHURCH PEACE UNION

**T**HE fact that practically all the Protestant communions of the United States are officially to assemble at St. Louis the second week in December is of such significance that it deserves the careful thought of all who are interested either in Christian unity or the uplift of the nation. For this Third Quadrennial of the Federal Council of the Churches of Christ in America is the one outstanding sign that the churches are realizing their unity and that they are becoming alive to the fact that the whole social order must be Christianized, and that it is only by the churches meeting in coöperative effort that this great task can be done.

Indeed, the passion for Christian unity that is now making itself manifest in both Europe and America has as surely sprung from this feeling that it will take a united church to make any impression upon the evil of the world as it has from a sense of brotherhood or consciousness of oneness in Christ. The present war has greatly accentuated this truth. It was only a few months ago that a well known Englishman remarked that had there been any kind of unity among the churches the war could have been avoided. The various communions were living as much to themselves as were the nations. This same man said, "Had the churches met at Constance for their movement against war ten years ago instead of two years ago, we might have had a Christian sentiment strong enough to have demanded arbitration."

It was this feeling that there must be a united church to conquer a united evil that has led to the inception of the three great movements toward Protestant coöperation that the world has thus far seen. The first of these was the Evangelical Alliance, whose

THE PRESIDENT OF THE COUNCIL  
Dr. Shailer Mathews is also Dean of the University of Chicago, Director of religious work in the Chautauqua Institute, editor of *Biblical World* and author of "The Church and the Changing Order"

great initial conference held in the old Chickering Hall, forty years ago, marked a new era in Christian unity. Dr. Josiah Strong, a real prophet of Christian unity and social justice, was its leading spirit, and altho it failed of permanency, perhaps because of the attempt to get doctrinal unity before the time was ripe, it left many children behind it and above all prepared the way for the Federal Council of Churches.

The second great movement toward denominational coöperation was the Free Church Council of England and

Wales. This has been a great factor in the life of the British churches, and, since the war broke out some of its leaders, notably its chairman, have been urging denominational federation and even union of the Free churches, for the sake of England after the war. This plea for advance has quite stirred the churches, and the favorable discussion has been significant.

The third great movement, and greatest of all, is that of the Federal Council of the Churches of Christ in America, born in Carnegie Hall in 1905. A group of men, among them Dr. William Hayes Ward, for so many years editor of *The Independent*, men who had seen the possibilities of a federated Protestantism, in the old Evangelical Alliance and in the National Federation of Churches and Christian workers, after long and careful deliberation decided to invite the Protestant communions to attend an Inter-Church Conference on Federation, sending delegates accredited by the national bodies of the denominations. The response was most encouraging, and 1905 found what was perhaps the first official congress of the Protestant churches in America, assembled in Carnegie Hall. There were about six hundred delegates representing practically all the large Protestant communions of the nation. Out of this great meeting the Federal Council of Churches was born, and in 1908 in Philadelphia was finally matured.

In the plan of federation adopted at the meeting in 1905 the first two articles and the heading "The Object of the Federal Council" reads: (1) "To express the fellowship and catholic unity of the Christian Church; (2) To bring the Christian bodies of America into united service for Christ and the world."

Perhaps the chief method of ap-

Underwood & Underwood

DR. CHARLES S. MACFARLAND, LECTURER AT THE YALE DIVINITY SCHOOL, IS GENERAL SECRETARY OF THE FEDERAL COUNCIL.

preach toward unity and cooperation that lay in the minds of the founders was the establishment of state and local federations of the churches. And the work of the office at the beginning was largely in that direction. But it was not long before great claims began to present themselves for recognition, claims that the formation of the Council itself had intensified and made possible. There was strife between capital and labor thruout the nation. There was the great conflict going on between the Church and the liquor interests. There was the whole question of industrial injustice as revealed in child labor, sweated labor, exhaustive hours, disregard of Sabbath rest, the social evil, marriage and divorce, unhealthful tenements, war and peace, corrupt politics, evangelizing the masses, giving Christian education to the children of the nation, the Christian attitude toward the immigrant—one after another these problems rose up and cried, "Here, you are a united Protestantism now. What have you got to say, what are you going to do?" At the same time the coöperating bodies of the Council began gradually to become conscious of its new strength and its common obligations, and it began to ask, "What are we, representing thirty communions and eighteen millions of Christians, going to do and say?" The result of this feeling both in the nation and in the churches that the united Protestant forces had a duty toward all these questions, a call to undertake a corporate, social redemption that one communion alone could not undertake on a national scale, led to the creation of commissions which should devote themselves to the study of these problems and to the furtherance of their solution. These commissions at present are on Social Service, Peace and Arbitration, Evangelism, Family Life, Relations with Japan, Federated Movements, Christian Education, Country Life, Temperance, Foreign Missions, Home Missions, Sunday Observance, State and Local Federations.

WITH the appointment of these commissions, much of the Council's most special work has been accomplished by their action. Each is constituted of about 100 representatives appointed by the communions, so that their actions are, in a sense, official. All of these commissions have rendered valuable service to the cause of Christianity during the last four years, especially those which have had salaried secretaries. Perhaps no better idea of the scope of the work of the Federal Council could be conveyed to one unfamiliar with its work than to briefly indicate some achievements of the three most active commissions, namely: The Church and Social Service, Peace and Arbitration, and Relations with Japan.

When the Social Service Commission was organized. Dr. Charles S. Macfarland, now the General Secretary of the Council, was chosen as secretary, and Dr. Josiah Strong became chairman. It immediately began to make itself felt in the nation. Dr. Macfarland spent his

first two years of office in visiting practically every national and state denominational assembly, and innumerable churches and groups of pastors, arousing the churches as to their duty toward the great social, industrial and national wrongs. As a result of his work, social service commissions began to be formed in denominations, in state assemblies and in the men's clubs of the churches. The commission secured resolutions when a group of Christians could be reached. It has conducted surveys of labor troubles. It has helped to secure justice to workingmen and has fought against various evils in our midst. It has done much to coördinate the efforts of denominational groups working toward these ends and has also done much to interest the various young people's organizations in social service. It has sent many delegates to Washington and has won the confidence of the administration. But perhaps its most valuable contribution to the religious life of America was its now famous *Social Creed* propounded in 1908 and reaffirmed in 1912. It marks one of the great steps forward in the life of the Church. It is as follows:

To us it seems that the Churches must stand—

For equal rights and complete justice for all men in all stations of life.

For the right of all men to the opportunity for self-maintenance, a right ever to be wisely and strongly safeguarded against encroachments of every kind.

For the right of workers to some protection against the hardships often resulting from the swift crises of industrial change.

For the principles of conciliation and arbitration in industrial dissensions.

For the protection of the worker from dangerous machinery, occupational disease, injuries and mortality.

For the abolition of child labor.

For such regulation of the conditions of toil for women as shall safeguard the physical and moral health of the community.

For the suppression of the "sweating system."

For the gradual and reasonable reduction of the hours of labor to the lowest practicable point, and for that degree of leisure for all which is a condition of the highest human life.

For release from employment one day in seven.

For a living wage as a minimum in every industry, and for the highest wage that each industry can afford.

For the most equitable division of the products of industry that can ultimately be devised.

For suitable provision for the old age of the workers and for those incapacitated by injury.

For the abatement of poverty.

The work of the Commission on Peace and Arbitration and its coöperating Commission on Relations with Japan is an illustration of how the Council has brought the Christian influence of Protestant America to bear not only upon national problems, but international problems. Its chairman from the beginning was Dr. Junius B. Remensnyder, and its first secretary was the author. It is no exaggeration to say that the widespread interest in international peace manifested in the churches is due to the labors of this commission. It has also brought the influence of the churches to bear on many specific occasions. It put the churches behind Mr. Taft's Arbitration Treaties.

It has acted in the various crises with Mexico, and effectively. It originated the Church Peace League, out of which The Church Peace Union (the Carnegie Endowment) originated. It joined with The Church Peace Union in calling the Constance Conference which created the World Alliance for Promoting International Friendship thru the churches, and works in close coöperation with the American Council of the World Alliance.

The Commission on Relations with Japan, of which the present editor of The Independent is chairman, has done remarkably efficient work under the direction of its able secretary, Dr. Sidney L. Gulick. It has put the whole Japanese problem before the churches. It has published books on American-Japanese relations that have received wide attention. It sent Dr. Shailer Mathews, president of the Federal Council, with Dr. Gulick as an embassy from the churches of America to the churches of Japan. It has done much to change public sentiment in California. It lately called a conference on oriental questions which has been fruitful in good results.

The activities of these three commissions, as given, are typical of the work of the Federal Council thru its commissions. The Commission on the Rural Church, the Commission on Evangelism, and the Commission on Federation are doing efficient and far-reaching work under their paid secretaries. The time will soon come when every commission will have its salaried head.

THE latest activity of the Federal Council is typical of what great things a combined Protestantism can achieve. The work of European relief had been progressing under the separate solicitations of various relief societies. But the gifts have been greatly increased since last May, when the Federal Council set for itself the stimulation of this beautiful sacrament of giving by issuing frequent encyclicals to the churches. It has followed the first splendid letter by others, and the churches have responded to its calls. The influence has been felt far beyond the mere giving. It has touched the heart of the church people of Europe and has become a factor in allaying bitterness felt toward our seeming neglect of them in their great affliction.

The Third Quadrennial at St. Louis will mark the highest point real Christian unity has reached in any nation. It will find a practically united voice on many of the great questions and problems before the land. If we are not mistaken, it will find the churches readier to take a prophetic outlook upon the future than they have ever been before. It is greatly to be hoped that the federated Protestant churches will be prepared to speak as boldly against war and preparation for war at this quadrennial as they did against social injustice eight years ago. It all comes to this, while many of us are talking Christian unity the Federal Council is realizing it.

# WHAT WE ARE TRYING TO DO

BY CHAMP CLARK

SPEAKER OF THE HOUSE OF REPRESENTATIVES

SIX years ago, after sixteen years of exclusion from power in the House and fourteen years of exclusion from power in every department of government, the Democratic party was restored to power in the House of Representatives and in that alone. In 1912 the Democratic party was given charge of the government of the United States in its every branch. We were put on trial, and the duty devolved upon us to demonstrate, not so much by fine phrases as by good works, that we were worthy of the confidence imposed in us by the voters of the land, and that we were worthy of their continued confidence.

We have not escaped this severe test. We have not shirked our duty. We have always remembered that he serves his party best who serves his country best. That we have done our best has been shown by the people throughout the country at the recent elections. The campaign was swift and for a long time uncertain. The Democrats have been returned to power because they have done their best, because they have kept their party promises, because they have served the people.

It was said that the campaign hinged upon the tariff, when no other thing could be said of it. We, as Democrats, have revised the tariff downward because the people elected us for that purpose. We have not reduced the tariff to destroy the industries and prosperity of this land. It makes me weary to hear people talk about the Democrats wanting to destroy our well-being. No sane man wants to injure in the estimation of a hair any legitimate industry of this country. That that charge is a thing incredible I have contended always, and especially since we carried the House and had the responsibility placed upon us. We all want the industries of the land to prosper. It is our country as well as yours; our children must live here as well as yours; we have as great a stake in the prosperity and happiness of this republic as you have.

I BELIEVE that the people of the country have been convinced that the Democratic administration has done its very best to frame the most advantageous laws which would answer the purposes of the times. These laws were framed at the behest of our constituents. The last three years have witnessed an era of constructive legislation which has surprised every one. In formulating many of these laws partisan politics have been forgotten. Republicans voted with Democrats, Democrats voted with Republicans, and the independents voted as they pleased. The President of the United States has, on the occasion of signing bills, called the country's attention to the excellent teamwork of the two parties on the floor of both Houses.

A man has to learn to be a congressman just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor. It is a high honor to be a member of Congress, if for only one term, and with the number of terms the honor increases in geometrical rather than in arithmetical proportion. A member's usefulness to his country should increase in the same proportion. Useful and influential congressmen are made largely by experience and practise. It is an unwise performance for any district to change representatives at short intervals. A new congressman must begin at the foot of the class and spell up. Of course, the more brains, tact, energy, courage, and industry he has the quicker he will get up. If he possess these qualities and if his constituents will keep him in the House, he is certain to rise as the sparks are to fly upward. No human power can keep him down. It is only fair and rational to assume that every congressman's constituents are anxious to see him among the topnotchers.

No man should be elected to the House simply to gratify his ambition. All members should be elected for the good of the country.

THE best rule, it seems to me, is for a district to select a man young enough to learn and to grow, with at least fair capacity, industrious, honest, energetic, sober, and courageous, and keep him here so long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and great influence in the House.

No man is fit to be the lawgiver for a mighty people, who yields to the demands and solicitations of the few who have access to his ears, and is forgetful of the vast multitude who may never hear his voice or look into his face. The duty of Congress, thru its members, not only now, but always, is to transmute the will of the American people into law, and notwithstanding the senseless and malicious abuse heaped upon the Congress, that is precisely what it does invariably when it can ascertain with a reasonable approximation what the will of the people is.

That is exactly what Congress has been trying to do, and few persons realize or can conceive how much toil, thought and investigation has been expended on such measures as the income tax, preparedness, rural credits, merchant marine, etc.

A great deal has been said about war, and about war on account of preparedness. I desire to say that if we attend to our own business we will never have another war. We have forced every war that we have ever had, and what is a good deal more to the point, we won in them all.

The people are not willing to see this country turned into an armed camp.

They are not willing to bankrupt the nation in military and naval preparations, altho willing to spend all that is necessary for the public defense. They are emphatically against conscription in times of peace, but they are for it should it become necessary in time of war.

But it is time to think that altho our educational system has been improved right along, we are forgetting the art of shooting in this country. We are forgetting the art of horseback riding. I wish every boy in the United States could ride like an Indian and shoot the way the squirrel hunters of Kentucky and Tennessee did the 8th day of January, 1815, on the great and glorious field of Chalmette.

It is true that we are trusting to arbitration to solve all future disputes, that is, those which can be arbitrated. Arbitration was regarded with contempt for a time. People were accustomed to making fun of The Hague Conference. The Hague Conference did a great deal of good. It did not prevent this stupendous war, and there may be wars in days to come, altho I hope not. I hope we will never be engaged in another one. I do not believe there is a nation on earth that has little enough sense to attack us, I do not care a straw which one it is; and I have abiding faith that if one of them does attack us it will get licked in the end.

I BELIEVE, however, that the great nations of the earth cannot stand much longer this piling up of armaments by land and sea; that this nation-bankrupting process must come to an end; and the only way that it can be brought to an end is to have an international conference on the subject. It may prove futile at first, it may be necessary to have half a dozen; but the only way that we can disarm all the nations is to do it by percentages.

What would be the sense of asking Germany to disarm without asking France, England, Russia, and the rest to do the same thing? What would be the wisdom in asking England to disarm without asking the rest to do likewise?

There are several propositions on the subject. We can afford to make this suggestion looking to disarmament. If the nations reject it, well and good; we cannot help it; but we can afford better than any other people under the sun to make the suggestion. We are the richest nation on the globe. We have the largest homogeneous population of all the nations. We are unafraid. In the interests of world peace we can lead the way.

Perhaps history will reserve to the United States the place of honor among all the nations as the one which is not afraid to insist on international peace.

Washington, D. C.

# PUSS AND HER TAIL

BY H. O. NOSREME

*Several of our readers have written to complain of our publishing so much "free verse." They find neither rime nor reason in it and regard it as a passing fad that deserves no consideration from a reputable periodical. To us, however, it seems a movement of considerable interest and without attempting to justify all that appears as vers libre we must confess to a liking for certain specimens of it. That is why, for instance, we published Amy Lowell's "Thompson's Lunch Room" in The Independent of August 28, Robert Frost's "The Telephone," October 9, and Eugene Dolson's "Old Houses," November 13. We wonder whether our critics will find "Puss and Her Tail" more to their taste than the others mentioned above. If not we hope they will be free to say so, for it will not hurt either the author's feelings or ours, and we shall be glad to have our readers write us whether they are interested in free verse in general and whether they find the following worth reading. Mr. Nosreme has written quite a little rimed verse, but we do not remember to have seen anything of his in this form before.—THE EDITOR.*

I make! Oh, no!  
I clap my hands  
In infantine joy and amazement  
Before the first opening to me  
Of this august magnificence.  
Old with the love and homage  
Of innumerable ages,  
Young with the life of life,  
The sun-bright Mecca  
Of the desert.  
Do you see that kitten  
Chasing so prettily her own tail?  
If you could look with her eyes,  
You might see her surrounded  
With hundreds of figures,  
Performing complex dramas,  
With tragic and comic issues,  
Long conversations,  
Many characters,

Many ups and downs of fate—  
And meantime it is only puss  
And her tail.  
How long before our masquerade  
Will end its noise of tambourines,  
Laughter, and shouting,  
And we shall find  
It was a solitary performance?  
A subject and an object—  
It takes so much  
To make the galvanic circuit complete,  
But magnitude adds nothing.  
What imports it  
Whether it is Kepler and the  
sphere;  
Columbus and America;  
A reader and his book;  
Or puss with her tail?

## INDUSTRIAL COUNSELOR, A NEW PROFESSION

BY ORDWAY TEAD

THE growing recognition that imagination and hard sense must combine for the sound upbuilding of industrial organization is one of the hopeful signs today. The new business generation is approaching its problems in an inquiring spirit and with a generous desire for clear seeing and wise planning. The spirit of research, of patient, close observation, of the boldly formulated if tentative hypothesis, is at last coming to its own.

Exponents of this scientific attack upon industrial problems are to be found among the younger men working their way to the top places in industry. They are also to be found in the still too few members of a new profession which Robert G. Valentine can justly be credited with inventing.

Mr. Valentine was an industrial counselor—a title rightly expansive because of the latitude it allows in the development of the idea. To be an industrial counselor one need pass no bar examinations nor hold any degree. But to match Mr. Valentine's own training and the fulness of experience he brings to his profession, will be difficult; and a vigorous apprenticeship must be essential. For at forty-four he had gained first hand knowledge in varied fields.

In 1896 he graduated from college. From then, as instructor at the Massachusetts Institute of Technology, as

*In the weeks since this article was written, Robert Valentine has suddenly died. But the profession which he invented, the new method of reconciliation and readjustment of the human relations in industry which he created, will not die. The extent of his contribution to the solution of the great problem of industry must still be a matter of conjecture. But his work unquestionably contains the seeds of great promise.—THE EDITOR.*

retary to a great banker and railroad president, for eight years in the Bureau of Indian Affairs during four of which he was its strikingly successful commissioner, he has had the opportunity to practise administration and to study many sides of American life. When in 1912 he decided to devote himself to the application of science and sanity to industrial relations, it was with intimate knowledge not only of business problems in general, but of complex details in particular. And in the last four years his work in over twenty different industries has further enriched his experience and added power to his advice.

His problem was not easy. Efficiency experts, advisers in management and

organization, welfare workers, lawyers specializing in industrial problems—all these were in the field with conflicting claims and principles. What impressed Mr. Valentine was the need for plan and purpose in industry. He saw the need of building business in terms of the men and women who were at work. He demanded a human valuation of the procedure in factories.

Not a novel conception? No; Carlyle, Ruskin, Whitman have understood and said it. But they had not done it. They never wrought into the ground work of factory organization the methods implicit in their principles.

To do this is the work of this profession for which Mr. Valentine believed the times are ripe. To bring to earth and into actual practise acceptable methods and details of organization which really dignify the manhood of those at work is to bring the healing gift for which industry has waited in feverish distemper.

What are his methods? Providentially he offers no panaceas. Right attitudes and constructive purposes can be trusted for their own out working. Sufficient if a creative mind can make these attitudes completely clear and winning; and interject canny suggestive ideas at the moment when these should be crystallized into actuality. Like other great inspirations having a

quality of genius, Mr. Valentine's contributions are astounding for their simplicity. Let no one be alarmed by the vocabulary which industrial counselors have found it necessary to create in the interest of accurate discussion. The kernel of his sanely applied truths can easily be grasped by the commonest laborer.

In breaking ground for his profession Mr. Valentine first developed a bit of technique which he calls the Industrial Audit. Using the analogy of the financial audit or the sales audit, he requires that his study shall reveal the strength, weakness and needs of a concern's working conditions and policies as they affect its workers. With his associates he makes a searching investigation of a factory or industry to reveal boldly and fully to their clients exactly what they find. He takes stock of the human resources of a plant, of its personal frictions and maladjustments, of the effect of its equipment on employees, of the prevailing sentiment of the workers as it expresses itself in their work and attitude, of all the inefficiencies that grow out of the size of modern enterprise and the remoteness of executives from manual workers.

In the course of an audit not only is the labor situation accurately sensed, but there inevitably results a close knowledge of the work, ability and spirit of the executives. Since it is they who must carry recommendations into practice, a study of their working attitude is welcomed by those in control. It would obviously be of little value to advocate extensive changes in policy and practice which fall on deaf ears and are made ineffective by wholly incompetent officials.

The impossibility of longer retaining a bearish and occasionally intoxicated overseer comes home with new force if the superintendent is shown the direct financial loss that results in terms of discontent and shifting in that department. The need of a changed attitude on the part of a grouchy and overweening employment agent is readily understood when the auditor shows how men are being turned away in fear of the concern thru disgust at its agent.

In almost every instance, the presence and quiet questions of these dispassionate counselors have led to immediate alterations before ever a suggestion is offered or the report submitted. Windows months dirty are washed. Walls are calcimined. Records of "hiring and firing" are better kept only to disclose serious wastes in the way workers are selected or laid off.

ROBERT VALENTINE, INDUSTRIAL COUNSELOR

But more deeply significant is the fact that from the industrial audit men in responsible charge come to see vividly the need for a consistent, carefully-conceived and consecutive attack on the human problems of their enterprise. The audit dramatizes this need. In the hands of convinced managers it becomes not only their weapon with boards of directors and investors, but the actual text book in line with which they map out improvements. Matters of selection, training, adjustments about work and pay, petty frictions, discharges, accidents and all the rest, must enlist the full time attention of discriminating officials. And these officials if they do not actually determine policies must at least understand fully why they are determined as they are.

Mr. Valentine's conviction about this was that the people with ultimate authority must be in close touch with their human problems. To visualize this responsibility in the business structure, he has evolved another mechanism—the Personnel Department. Just as sales, finance and production have department heads directly responsible to the president or general manager, so the personnel department must have the same conspicuous and distinct existence and leadership, if its problems are to be met.

The imaginative insight which dis-

covers the uses of the simple is perhaps most clearly revealed, however, in what industrial counselors call "job analysis." Job analysis is the clear, complete study and statement of everything about a particular job and its relations to the factory in which it is performed. Obvious and simple? Yes, but it has not been done before. The followers of Frederic W. Taylor make time studies; Gilbreth and his school make motion and fatigue studies. Both have been criticized for ignoring the vital, personal relations. Job studies where every modifying factor has weight are new, and they take high account of the fundamental human factors.

It is startling to see the discrepancies, the wastes, the over-lapping of tasks, the total absence of responsibility for tremendously important features, which are revealed when a job is tackled by such analysis.

These job studies have in certain instances shown themselves capable of revolutionizing shop methods. Indeed Mr. Valentine believed that so much radical readjustment may come out of them that he wants the men at the job protected while the analysis is made and while the changes revealed by it to be necessary are introduced. If rear-

angement of material, machinery, methods of record keeping, if better training and improved light, air or sanitation can make it possible for twelve people to do the work of fifteen, or for fifteen in eight hours to do what they formerly did in ten, he wants the workers to be consulted about the changes and to share in the benefits.

This active consent of the workers not only to questions that relate to work, but in those that relate to pay, is a further emphasis that again distinguished industrial counseling from "scientific management" or "organization engineering." The contribution which he believes assures this active consent he calls the Determining Board and Wage Board. To tell of their work in detail would require an article by itself. Their intent, however, is to make clear the distinction between determining the content of a job and settling upon the pay for that job. This helps amazingly to clarify issues. If the principle of representation, if the active consent of the governed, is to operate, Mr. Valentine believed it can only come to reasonable effectiveness by working on a basis of acknowledged facts about any job. Only in the light of such study can there be common ground for intelligent agreement. These two boards are the representative bodies which have for their task

the final decision in matters of work and of wages.

Perhaps the most compelling thing that can be said about Mr. Valentine's work is that it is dominated by such full and wide appreciation of the big world tendencies. Here is a profession dedicated to the perpetuation of no school, dogma or creed. It is based upon the conviction that industry is nothing more or less than the people's efforts to make themselves a living. A living is more than bread and meat. It is growth, wider outlook, broader loyalties. Industry must be so ordered as not only to keep men and women alive, but to produce *real* living men and women while producing goods. It must work in line with the educational motive of all forward-looking activity. It must contribute to living not only indirectly but directly. It must give to the worker opportunity for skill, varied tasks, responsibility and voice in determining affairs. Industry must in a word become an organic part of the community's life—not an ugly, monotonous excrescence upon it. It becomes organic only as it shares the world-wide tendency toward the people's participation in the control of their own destinies.

All of which Mr. Valentine rarely talked about—may even have never so expressed it to himself. But in it and because of it, his work is unique and partakes of a quality that gives it permanence and power of growth.

The question immediately arises as to the extension of Mr. Valentine's sphere of influence. Are his ideas so bound up with the power of his personality as to be of value only thru his effort. Fortunately, this does not seem to be the case. Already Mr. Valentine had gathered about himself a group of men and women with whom the work both in principle and method is being hammered out and built into the structure of the concerns and industries which retain them. The contagion of these ideas is the clearest indication of their fruitfulness. Calls for the services of this new profession come from every part of the country and from other countries. Its appeal and reason for being are as wide as the industrial system concerning which it seeks to advise.

But it is not enough, Mr. Valentine maintained, to

build up a profession of service to employers alone. It is of the very nature of industrial counseling that its policies be kept broadly human by work not only for employers but for trades unions, for governmental bodies, for any perplexed individual seeking counsel in business affairs. The need for

the confessor, never absent, seems to find a truly modern satisfaction in the confidential relations that necessarily exist between client and counselor.

A valuable instance of the all-round problem for which the counselor holds himself in readiness, is afforded in the directorship of the Joint Board of

Control for the Enforcement of Protocol Standards in the dress and waist industry of New York City, which Mr. Valentine recently organized. This position, supported jointly by the unions and the manufacturers' associations, has for its object the enforcing of the various provisions of their joint agreement.

For example, one of the clauses of the Protocol which has been the source of special confusion, states that "the average experienced worker" is to receive a stated amount per hour. But what is the "average experienced worker"? To this, among other problems in this great industry of over thirty thousand workers, Mr. Valentine had been addressing himself. A careful study of the elementary motions of many operators over a considerable period, of the methods of management and operation, and of the results of work on the workers, begins to bring some meaning to the term.

Mr. Valentine interpreted the Protocol with a new method. In terms of the daily life of the industry and its workers he has been finding what its standards mean. He had been content with no bare statistical record from which the real meat of human facts had been torn away. We have in his investigations a body of knowledge which confidently interprets the larger significance of industrial effort. And this single example is only illustrative of the note that is struck in the work of his staff for all their clients.

Dissolution of bitter and cruel alignments in industry may be long in coming, but it will be hastened by the extension of the services which this profession can render. The open-minded, constructive attitude, with its fuller measure of faith in people, in their value and ability, is sorely needed. Industrial counseling, loyal to the spirit of its originator, will bring weight of experience to the reinforcement of these sound tendencies. Industry is on the way to a vitally human assessment.

*New York City*

#### NEW LIGHT ON LIBERTY

Eighty thousand people have contributed to the project, started by the *New York World*, of illuminating the statue of Liberty in New York harbor. On December 2nd at six o'clock the statue is to be officially lighted for the first time, with President Wilson as the chief speaker at the dedication exercises. The illumination is to continue every night and the Federal Government has promised to assume the running expenses.

# THE CHAPLAIN'S JOB

BY JOHN M. THOMAS

I DID not hold a regimental church. The army has a bugle call for "church," plaintive, soft, and very beautiful, and some chaplains console themselves for handful audiences by imaginations of mysterious influences supposed to proceed from the mere sounding of the church call. I wanted something more tangible. So I had a motor truck driven into a company street every Sunday evening and the entire regiment assembled in regular formation before it. Mounted on the truck I read the men letters from home, some from prominent citizens, some from good women who wanted to know what they could do for soldiers, anything to remind the men of the interest the friends back home took in them. Then without scripture, prayer, or hymn, I gave them the highest truth I knew concerning duty to God and man. I tried to divest the essential message of religion of all sectarian accidents and to put the heart of it in language that they could understand and to give it appeal that they could not resist.

I do not know that I succeeded every time, but as I climbed off the truck one night a man came up to me and said, "Chaplain, that was a d— good talk. Any d— fool who wouldn't listen to that ought to be put in the guardhouse."

Soldiers swear when they do not know it, and also when they do know. "Full of strange oaths" was one of Shakespeare's two characterizations of a soldier, but many of those I have seen are full of just ordinary oaths. Regulars and militia, regiments from cities or country villages, there is little difference; and while there are thousands of clean speech men in khaki, there are enough who leave their Holy Name badges on their citizen's clothes to make the ordinary camp talk sound pretty badly.

One of the 17,256 regulations of the American Army forbids profanity and prescribes a penalty, but I never heard of charges being preferred for its violation. Sometimes a poor fellow is fined ten days' pay for swearing at a ser-

*President Thomas, of Middlebury College, Vermont, was chaplain of the First Vermont Infantry during its service on the Mexican border last summer. He is the author of "The Christian Faith and the Old Testament" and he was for many years pastor of a church in East Orange, New Jersey.—THE EDITOR.*

geant, but the offense lies in the fact that he swore at a sergeant, not that he swore.

I could not find anything in the army regulations to tell me what a chaplain should do for a regiment of Vermont militiamen emptied out on a Rio Grande mesquite field on a July Sunday afternoon. I suppose the ordinary notion of an army chaplain is that of a man who sits around in his tent and prays and reads the Bible until a soldier dies or goes to the hospital. In Civil War times chaplains used to look after the mail, but in those times letters were comparatively few, and a saddle bag was large enough for a post office. Our mail on the border was three or four large

International Committee of the Y. M. C. A., and it was a Godsend to the regiment. We had all the home papers, plenty of magazines, free stationery, a phonograph with the "Five-fifteen" and the "little old Ford" that "rambled

Paul Thompson

EACH MAN MENDS FOR HIMSELF

right along," and the men saw to it that the building was kept full every available hour.

There were two good men to look after the place, and absolutely no friction between the Y. M. C. A. and the chaplain, such as occurred in some of the border stations. The only trouble with the army Y. M. C. A. is that there is not enough of it: there ought to be one for every regiment in the service, the regulars as well as the militia.

Once a week I gave the men a poetry evening in that building, mostly Kipling, of course, but some T. A. Daley, and Douglas Malloch, and Dr. W. H. Drummond—for we know the French Canadian in Vermont and like to hear him talk. Soldiers stand for poetry? You should have heard them call for the old favorites over and over again. One man carried his "Barrack Room Ballads" in his haversack to an outpost fifty miles down the river and another brought me a copy of the "Rubaiyat" and told me the stanzas he liked the best.

Unfortunately Mr. Kipling is right that "Single men in barracks don't grow into plaster saints." Men in tents in a Mexican border town do not have much better chance. I had no idea of making saints of my Green Mountain boys, but I thought I would try to bring them back no worse than when they left their homes. So I had a "Chaplain's Post Card" printed, with the motto—

"Our whole duty by the old flag and the old State.

Every man a stronger, better man when he gets back to old Vermont."

I believe they have lived up to that motto and are returning stronger and better men. They have learned much: prompt, exact, and full obedience; respect for superiors; orderliness; cleanliness, and regularity of habit. They

THE REGIMENT AT OUT-DOOR CHURCH

sacks a day, and a couple of young enlisted men could handle it better and cheaper than the chaplain.

But I soon found work enough. Our regiment was short of canvas and in some companies the men were crowded twelve in a tent. They had no cots and slept in their blankets on the ground with the centipedes. There were no camp chairs, not a place on the whole camp site where an enlisted man was free to go and sit down. Did you ever try to live for a week without a chair? To eat squatting on the ground, to read the home paper propped up on a blanket, to write letters on your knees, and to have nothing to do when off duty except to stand around or lie down, gets decidedly monotonous after a day or two.

So I telegraphed back to Vermont for funds for a Y. M. C. A. building, any kind of a shack where the men would have a chance to sit down and read and write home. I got my building very shortly with the help of the

© International Film  
MESS TIME

caught quickly the soldier's respect for the flag. They saw something of the vast extent of our country and the immense variety of it. Their minds were broadened and they will be better and more useful citizens from their three months' experience in the work of a soldier.

The soldier should not be measured

HITTING A WARTIME RAG

by the standards of Sunday School teachers. He is engaged in rough business and has a great deal of rough, tough work to do. He is apt to offend against the conventionalities, but he knows what an order is, and he will stay in the ranks till he drops, and he would rather face danger than loaf any day. Virtues are qualities which God needs for His work, and the determination of them has been left too much to pale skins in long silk dressing gowns. I had to make a somewhat different list for my khaki men, getting ready, as they thought, for an expedition into bandit-stricken Mexico. Their first duty was to be good soldiers, and for that they needed quick and exact obedience, respect for superiors, orderliness and cleanliness, and grit and patience and self-control. A chaplain who is a man's man can earn his salary to the full by sympathetic encouragement of the men of his command in the learning of these hard lessons.

The hardest lesson for a man thrust suddenly from civil life into military responsibility is that he is no longer a citizen entitled to free speech. He must not say anything that could be interpreted as criticism of his superiors, or of the administration of the army, or of the policy of those who control it. Anything bordering at all on politics must be entirely avoided. The President of the United States is Commander-in-Chief of the army, and any criticism of his acts or utterances by an army officer is a serious offense, rendering one liable to severe military penalties.

This restriction is especially difficult for a chaplain, whose profession and duties require him to do a good deal of talking. He must inculcate patriotism, without reference to the vital questions in which patriotic men are interested. He must stir his men to loyalty and to the colors, without any fair and free

discussion of what the flag is being made to stand for by the men in highest authority. The very topics in which the thoughtful men in his command would be most interested are the subjects that he must be most careful to avoid.

I learned that a keen watch is kept on all public utterances even of a militia chaplain. I wrote a letter to the home people which was published in a little country newspaper, in which I said that Texans of the border seemed to have the same high respect for President Wilson's Mexican policy that Green Mountain Republicans had. It was not two weeks before I was called to account and informed that as an army officer I had no right to make any such observations. It seemed that a United States Senator had noticed my little letter and called on the War Department to silence me, which they did. Such limitations may be necessary to military discipline, but if this country wants strong men as chaplains in its army, men of the resolute personal independence sufficient to exert influence over soldiers, some way must be found to give them a little more freedom of speech.

I was instructed by my Colonel to make a canvass of the regiment and

© Underwood & Underwood

LETTERS FROM HOME

report the men who had left families at home without sufficient support. I found a large proportion in every company. Such men have no business in the second line of defense, which the National Guard now forms. If the militia is to be federalized, the standards of enlistment should be changed, and only such men kept on the rolls as can leave at any moment for federal service without imposing hardship and destitution upon women and children. Large numbers of the present guard belong in the "Land-sturm"; they should not be in the second line.

Sanitary arrangements in our camp were beyond criticism, showing that the lesson of '98 had been well learned, but our military equipment was sadly deficient. All we had of a machine gun company, supposed to be attached to every regiment of infantry, was one first lieutenant, and his equipment consisted of a range finder, the only one in the regiment. We were six weeks on the

border without half the prescribed number of intrenching tools, which are as necessary as rifles. There were "mounted" officers without horses, and some with horses and no saddles. We had the old circular blanket rolls, torturing hot in the Texas sun, instead of the packs hanging from the shoulders supplied to the regulars. Our quartermaster made every effort to get equipment, and the district officers did their best, but the army did not seem to have the material necessary for so large a sudden increase of troops in the field. This country has a great deal to do in the way of preparedness before even the small army we have on paper is properly supplied with the instruments of modern fighting.

A chaplain has to do with the morale as well as the morals of his regiment. He can do much to keep up the spirits of the men, their heart for the work, and their loyalty to the service. In this respect the chaplains on the border had a difficult task. Their men entered the federal service with the high spirit and enthusiasm of soldiers called to serve their country in the performance of a great national duty. But as the weeks wore away on the Rio Grande they began to question why they had been brought so far and held there. Not a word of explanation was forthcoming. To this day it is debated in militia circles what the whole movement was for. Never before has an American army been called into the field and left so completely in the dark as to why it was summoned and what policy it was depended upon to sustain.

It was almost impossible to keep up the spirits of the men in such circumstances. The best a chaplain could do was to try to teach the lesson that the first duty of a soldier is to be at home in his shoes, and to be contented anywhere the orders are to stay. I tried to do that, and so far as the First Vermont is concerned, while we would prefer to be told frankly and clearly why we are asked to serve, I am sure we are ready at any time to answer the call to the colors, and much better prepared for actual service because of our experience in near warfare on the banks of the Rio Grande.

TENT TALK

# EVERITT SHINN, VERSATILIST

BY DONALD WILHELM

**A**LMOST the only thing Everitt Shinn has not invented is a patent breakfast food. He draws the line there. Probably he could invent one if he wanted to. "There's nothing left out of any of us," he says. "We can all do anything, in our measure."

A wealthy art collector once climbed to Shinn's studio in New York and found the young painter in flannels and blue shirt working over a design for Bonnie Glass' new stage hat. The art collector wanted a certain Shinn painting. "What will you take for it?" he asked.

"Four hundred dollars."

"I'll give you three—"

"Now it will cost you five."

Shinn got eight hundred and fifty finally, which shows he is a good business man.

Before anyone had mentioned him among the Upper Half Dozen of young American painters, before he had even made a reputation as an interior decorator, Clyde Fitch, the dramatist, called to see him one day. "I am building a house," he said—it's celebrated as the Clyde Fitch House now—"and I want you to decorate it from top to bottom."

Young Shinn, whose mind works as fast as his fingers, said he would.

"But I haven't any money," mentioned Fitch.

Shinn took the job anyway. Mr. Fitch had to pay for nothing but the materials. There were two ceilings, two pianos and a lot of panels and details that "made" Shinn. He got the contract for decorating the Belasco Theater as a result. And he was wishing all the while that he was making steam engines. It is said on good authority that he designed one—a rotary engine that another man patented—and now that other man is very well to do.

**W**HEN Mr. Shinn started out in life, in fact, he planned to be an engineer from Philadelphia. He went to an engineering school, he drew patterns for locomotives in the Baldwin Locomotive Works, and then he worked as laborer, while learning to use his hands, in a chandelier factory, on the Reading Terminal, on the Academy of Music, much to the concern of his father and the paternal plans. Still more to the concern of his father, he was next found on the *Philadelphia Press* drawing pictures. For a few years he oscillated between Philadelphia papers, and then he oscillated between New York and Philadelphia. One morning he appeared at the offices of a weekly magazine in New York. He appeared again the next morning. He appeared every morning until the editor in chief came out one day and roared "Go home!"

Shinn shook his head. "I'm going to keep on coming every morning until you give me an assignment to get rid of me," he said.

The editor groped for an impossible assignment. "I want a double page il-

lustration of the crowd leaving the Metropolitan Opera House in a snow storm. If you haven't got it, get out."

"I've got it," smiled Shinn.

"Show me—"

"I'll bring it in the morning."

He worked all night. He made a pastel with hundreds of figures in it, and street cars, cabs, and snow. He took it to the editor early the next morning. Every week for a year thereafter he drew a double page for that magazine—*Harper's Weekly*. And then he became art editor of a fiction magazine. He selected a cover one day—there was a lady just moving off into the darkness. "Impossible!" roared the editor in chief, "you can't have night—no artist can paint night. How could he?"

"Good night," said Shinn.

**H**E went home and wrote a melodrama, after having proved a really good magazine editor. It was a satire on the old fashion melodrama. Technically it was well enough done to be taken twice across the continent and back on the Keith Circuit, scenically it was a masterpiece of ingenuity. He worked it out in miniature first. He works out everything in miniature because he likes to work with his hands. He turned from that to write an opera and it was a success. Incidentally he made a crutch for a fiancée limping from a broken ankle. "What another

man can make, I can make," he said. "There's nothing left out of any of us."

He wrote a couple more "melodramas." All were successful. The last of them—"Lucy More, the Prune Hater's Daughter"—had a notable machine in it, also of Shinn's perfection. Incidentally he learned to act, went out on the professional stage acting for a time, and came back to New York with an idea for a new musical play in mind.

**M**EANWHILE, he was painting, and painting notably. He was asked to design the interior of Trenton's new city hall. He set to work to make a city hall in miniature and this miniature turned out to be a famous example of craftsmanship. In it was shown every detail of the city hall that was to be—360 electric light bulbs, windows with the real Trenton perspectives painted outside changing with the changing lights, and in the great council chamber there was everything ready to the ink-stands and pens. He finished the larger hall, it turned out to be a large replica of the miniature down to the smallest detail. "I could build a submarine," he argued. "Anybody but the tired business man could—because everybody has the elements of constructive ability—but he's got to use them."

Just to show that he could do what anybody else could do—and do it perhaps a little better than it ever had been done before—he turned to painting three street signs—and a street full of such signs would be a place of real art.

There are many other things that Everitt Shinn has accomplished: He has taught school, he has done very good wood-carving, he has designed furniture and made it. Just the other day he was found designing a gown for a Broadway actress. The only thing that is the matter with him, he says, is that he is full of constructive thoughts. He never puts off till tomorrow what he can do today—not even tea or tobacco, trouble or an extra meal. Call him a variety show, if you like. If he isn't that at least he never sleeps in bed twice in the same position. If he slept in bed twice in the same position he wouldn't sleep well, because routine is his nightmare. "Routine," he says, "is prison. I hate prisons. No man could live in a prison a thousand years—"

But there he stops to advocate a good book. From books he turns to the Gnome motors or the Bleriot monoplanes, one of which he wishes for, along with an automobile.

But it is easily discoverable that he is not addicted to wishing. Diagnosis shows his is a backbone—not a wishbone. For he gets everything worth wishing for except what he doesn't wish. He is a very busy man.

"I'm going to live a thousand years," he laughs. "I'm thirty-seven now and I've never been tired in my life. I'm really younger now than I was when I started."

By Himself

HIMSELF

# BOOKS FOR THE YOUNGSTERS

## A CHRISTMAS GUIDE

PLEASE hurry," pleaded a small boy, whose aunt was reading "Robinson Crusoe" complete. "I don't want to hear any more about God, I want to get to the savages." The boy was quite right from either the literary or the moral point of view. Whatever moral lessons "Crusoe" has carried down the generations, they are of fearlessness, perseverance, ingenuity, and entirely by-products in a good yarn. Despite the shocked disapproval of the believer in the sanctity of the printed page, wise iconoclasts have dealt with Defoe's masterpiece, Cooper and other staid classics, as Homer, Cervantes and Froissart have long been treated. Philosophy and mawkish maidens and long descriptions of scenery have been extracted, the real characters and the action left. Hence it is a new lease of life for the tales of our grandfathers.

Not that we are rejecting stories as conductors of good morals. Indeed a good story, because in being a good story it fits with the eternal verities, is one of the best conductors of morals. But if it is to be used to point a sermon, the use should be frank. Advertisers to the contrary, neither children nor grown-ups like to read a two-page tale only to find at the end an invitation to buy a certain make of soap. Youngsters take a parable all right so long as it goes about unmasked, but they do not like to be deceived.

Kenneth Grahame, in making his book of *Children's Verse*, rejected at once everything without literary quality; all archaic and classical subjects and blank verse; all poetry on death, of which an extraordinary amount is address to children; and all poems about children from their elder's point of view.

Of course the fairy and folk tale and the stories from ancient history and literature are the very marrow of prose literature for children; but with this exception Kenneth Grahame's rules will prove an excellent guide to the buyer bewildered before the scores of gay volumes coming each autumn from the

juvenile press. The first requisite is that the English be at least correct. The "Brer Rabbit Stories" are of the few exceptions to the rejection of slang and dialect, because their dialect is so far from daily speech as hardly to affect it.

With Kenneth Grahame's help children at least may be mercifully freed of those very young persons who reform neighborhoods. The adult reformer is a painful necessity in this imperfect world, but children in their normal state do not wish to improve their elders. They prefer to "let sleeping dogs lie" and in return to be now and then let alone themselves.

Into the same category fall the super-boy adventurers and the youthful conquerors of industry to whom come opportunities and triumphs their fathers in all their forty or fifty hard-working years never met.

All this comes round to the theory that literature for young folk has the same canons as other literature. It must paint truly the people and the life it sets out to portray, and, dealing with the life of children, it must picture it in proportion to the rest of life, and it must not endow it with emotions that do not belong to it. It has to be confessed that writers for girls are rather worse offenders than writers for boys, altho the present horde of boys' books born of enthusiasm for outdoor activities and khaki, for unreality and lack of proportion, race their sentimental sisters pretty close.

One characteristic is noticeable in this year's output. In place of the gory tales, the first effect of the Great War, history is being ransacked for stories all centering in the active virtues of public service, sacrifice and courage.

It is none so simple a matter, buying books for one's juniors. So, unless one knows one's story or one's author well, it is wise to confine one's self to the historical and fairy folk tales, and to the children's classics, of which happily neither children nor illustrator ever tire.

### FAIRIES AND MAGICIANS

There are no finer fairy tales than the Scandinavian, and these *Top-of-the-World Stories*, mostly Finnish and Norwegian, translated by Emilie and Laura Poulsson, are of the best. They are for older boys and girls than Miss Poulsson's earlier books and they are delightfully illustrated by F. L. Young.

Brand new, old-fashioned fairy stories, with droll pictures fill Will Bradley's *Wonder Box*. Very good they are, too, with a shimmer of jewels and silks and mysterious music and selfish princes and gentle serving lads and wedding coaches, just as they should have.

In answer to the command *Tell Me a Hero Story*, Mary Stewart has brought forth tales from India, from Egypt, from Serbia, from France, one an East Indian version of the Greek *Alcestis* and another from the trenches of 1914.

Mrs. Burnett's parable of the prince who learned what all kings should know and the cripple who made things tidy in the *Land of the Blue Flower* has a holiday edition with border and colored plates.

Eight booklets, of good type and attractive pictures, *The Old Time Fairy Box*, put the classic nursery stories and rimes into handy form. Here are Dick Whittington, The House That Jack Built, Tom Thumb, Beauty and the Beast and ever so many more.

Collodi's ever delightful history of the puppet, *Pinocchio*, who had the chance to become a boy and came within an ace of turning into a donkey instead, deserves what it almost gets, a new edition a year. But not always does it have as charmingly tinted pictures as these by M. L. Kirk.

This year it is for the *Arabian Nights* that Louis Rhead has made a hundred of his always vigorous and imaginative drawings. Twenty-seven tales, *Ali Baba*, *Sindbad* and other favorites have been chosen for this striking book with its decorative initials, its heavy paper and large type.

Frederick A. Waugh stopped painting "wild sea horses" long enough this year to write the history of *The Clan of Mumes*, and draw extraordinary and delightful pictures of them. Mumes were created by a very inventive wizard as long ago as "once upon a time." They are queer—so queer you often have to study the pictures to tell Mumes from tree roots.

Quiller Couch has retold from the old French of Perrault, *Sleeping Beauty* and *Other Tales*, and Edmund Dulac has given them charming colored plates. These are as delicately fanciful and daintly precise as old French engravings. They are in soft colors; the book is a quarto, large type, heavy paper, a book of distinction.

## VERY LITTLE FOLK

Told by the Sandman, we hear, is to be used for "research work" in a German university. What an amazing use for it! But it is sure to make a popular journal. More thoroughly natural, charming, amusing little stories of fairy folk and animals than these of A. P. Walker's it would be hard to find.

E. Blaisdell MacDonald tells a pretty story in *Chandra in India*. Chandra was a lad of the gardener caste and loved best of all to raise marigolds. He was at Delhi at the time of the Durbar, and thereby became gardener at the palace.

Delightful colored cuts and plenty of them illustrate *Mother Goose Children*, in which E. A. and M. F. Blaisdell have repeated the old nursery rimes and added to them in simple words further accounts of the children of Mother Goose. A charming little book.

An ingenious scheme is worked out by C. D. Chapman in *Self-Made Pictures*.

From sectional colored plates to be cut out and pasted on a background plate, children build up the complete pictures of various American historical places and scenes.

*The Owllet Library* has ten fascinating, gaily covered books with text and spaces to be filled by the twenty-four paster pictures tucked in the pocket on the back cover. Butterflies, boats, birds, flowers, foreign scenes, all sorts of interesting topics are on the list.

*The Know About Library* also is made up of booklets to be illustrated by paster pictures. These are larger than the *Owllets*, with decorative paper covers, twenty numbers, ten pictures each, and can be bought separately.

A nonsense story to be read aloud to very small persons while they look at the very astonishing pictures is *The Way to Santa Claus House* by Mrs. Burnett.

Once upon a time a little girl played with the tiny dolls in her doll's house as tho they were marionettes. How she did it and what Mr. and Mrs. Delight and all

the other doll people did G. C. Warner tells in *The House of Delight*.

It is not often that stories confessedly with a moral are so frankly entertaining and natural as C. S. Bailey's *Stories for Sunday Telling*. They are about very human youngsters and about animals and about excellent fairies.

## ALL SORTS OF ANIMALS

*The Little White Fox and His Arctic Friends* is an uncommonly good animal story. R. J. Snell, the story teller, doesn't tax credulity over much and he makes white foxes and polar bears and ptarmigan very interesting beings.

*Mother West Wind Why Stories* are this year's continuation of F. W. Burgess' fascinating nonsense stories. These are the best of fooling, but besides they manage, without ever ceasing to be funny, to tell a few facts of natural history and to set forth a healthy ideal.

Two more Bedtime Stories are out. *Old Man Coyote*, that tells of a dreadful sound in the Green Forest, and *Prickly Porky* and how he rolled down the hill. The one criticism of Mr. Burgess' tales is that they are too wide awake for bedtime.

*Hollow-Tree Nights and Days*, A. B. Paine's joyous histories of Mr. Turtle, Mr. Possum, Mr. Rabbit, Mr. Owl of course, and others who pull the latchstring of the Hollow Tree, are made the more entertaining by J. M. Condé's amusing pictures.

Wholly imaginary are the stories of *Chickadee-dee and His Friends*, but they give, by the way, much information as to bird ways and

## A black and white line drawing of a woman sitting in a high-backed chair. She has dark, curly hair and is looking towards the viewer with a surprised or distressed expression, her right hand raised to her cheek. She is wearing a light-colored, short-sleeved blouse with a ruffled collar and a dark, patterned skirt. The chair has a simple, vertical-slatted back. In the background, a doorway is visible, and a small rectangular object, possibly a picture or a mirror, hangs on the wall to the right. The drawing is done in a sketchy, expressive style with cross-hatching for shading.

# GOOD BOOKS

## THE ABINGDON PRESS

What gift but a book implies anything and everything from mere acquaintanceship to the utmost devotion? What gift but a book can carry its peculiar message to the baby, the boy, the girl, the college man, the fiancée, the father, the mother?

Are your Christmases bookless? Do your gifts convey the delicate compliment that you consider your friends have brains as well as bodies?

Let the imprint of THE ABINGDON PRESS be a guide in selecting worth-while presents this year. The catalog, sent upon request, will give you many suggestions. Some of the latest publications are described below.

### GIFTS FROM THE DESERT

By FRED. B. FISHER

Illustrations by Harold Speakman

A beautiful Christmas Story, interpreting the gifts of the Wise Men—gold, frankincense and myrrh. The setting and imagery are oriental, and the illustrations, harmonizing perfectly with the theme, add much to the charm of the book.

Price, net, 50 cents postpaid.

### RECOVERED YESTERDAYS IN LITERATURE

By BISHOP WILLIAM A. QUAYLE

A series of brilliant essays on men, women and literature. The name of the author is sufficient to suggest the charm, piquancy and originality that characterize anything written by him. Vision, variety, imagination and penetration are evident on every page, and the book will be a delight to every reader. Price, net, \$1.50 postpaid.

### CHINA

AN INTERPRETATION

By BISHOP J. W. BASHFORD

A first-hand study of China's history and an interpretation of the principles underlying the ancient Chinese civilization and of Western ideas and ideals, by one who for the last twelve years has been at the very center of Chinese life. Illustrations, map, appendices and index. Price, net, \$2.50.

### THE MOUNTAINS OF THE MORNING

By GUY FITCH PHELPS

A beautiful romance—pure, wholesome and interesting—and with a gripping message. The scene is laid in our own great West-land, in the Valley of the Silver Bow, and the reader lives in the atmosphere of the story, which is exhilarating and inspiring. The author loves nature and describes it with ease and charm, while his idealism and delineation of character are unusually fine. Price, net, \$1.35 postpaid.

bird life, and an appendix containing clear descriptions of the birds mentioned makes this an excellent little folks' nature book.

If any small body likes to be read to let him get S. D. Kirkham's *Half-True Stories*, for every grown-up in the household will want to see the orange cover with the crocodiles, and turn the smooth cream tinted pages, and look at Mr. Kirkham's sepia drawings, and then—before you know it somebody will be reading Spooky aloud.

### OLD FRIENDS IN NEW CLOTHES

Some nineteen years ago John Brownjohn added to the world's gaiety by the *Adventures of Miltiades Peterkin Paul*, "a very great traveler tho he was small." This new edition with its droll pictures, by J. Goss and L. Hopkins, will amuse the new generation of youngsters, and the parody on "Don Quixote" will rejoice grown folk afresh.

A thin book holds Ruskin's lovely fairy tale, *The King of the Golden River*, with an introduction that tells the pretty romance of the story's origin, and delicate drawings by H. P. Barnes after the original pictures by Richard Doyle.

Not enough folk know that Everyman's Library has a fine list of children's classics. Mrs. Ewing's stories, *Daddy Darwin's Dovecote*, *Jackanapes*, *Mrs. Overthway's Remembrances*, with little line drawings, and MacDonald's fairy romance, *Phantasies*, are issues of this year.

Almost every year brings new print and binding and usually new pictures to the *Water Babies*. This time F. A. Nankevell had the fun of drawing Tom and the sea beasts. Amusing pictures they are, with droll figures in conventional landscapes—we mean, mostly, waterscapes.

An exciting tale, *The Lance of Kanaka*, by H. W. French, printed first some twenty-three years ago, is well worthy a new edition. It gives a sense of the desert and makes all camels, especially white ones, our friends.

*Ramona*, by Helen Hunt, that finest of Indian stories, is out in a new edition which should make it known to the young folk who have learned to read since the old brown cloth bound volume tumbled to pieces from much use.

A third Stevenson story, *The Black Arrow*, is added to the series of children's books illustrated by N. C. Wyeth. No more delightful color work comes from American presses this year than these pictures, dramatic in conception, full of mystery and at the same time intensely alive.

### JUST STORIES—FOR GIRLS

*The Key to Betsy's Heart* was Vanart VI, a bad little dog with a pedigree and a taste for shaking chickens. How he civilized Betsy and a trainer civilized him is an entertaining tale, by S. M. Ives, with entertaining pictures scattered through the text.

No parents, a vanished brother, an invalid cousin, and two grown up friends make the circumstances in which *The Independence of Nan* developed. Nina Rhodes's book is not full of firecrackers as the title suggests, but is the story of a kindness that cleared a mystery.

A merry team were *The Twins*, "Pro and Con," of whom Winifred Arnold tells, and droll happenings filled the summer that they, with their small dog, were exiled to a Massachusetts village.

It is a pleasure to run across so sincere and gay a little book as *Prudence Says So*, by Ethel Huston. The five girls of the Methodist manse are all real girls. The parson and Aunt Grace are as real if less exuberant.

A village of New England and its beauty spot, *Master Simon's Garden*, as it was in Puritan days and again in the Revolution, is the setting of a charming historical romance by Cornelia Meigs.

Mothers are out of fashion for girls' books, but Margaret Ashmun likes them and has an excellent example of the nearly extinct type in *Isabel Carleton's Year*. It was the last year of high school and held a complete family, a lot of schoolmates, a

## What 15c Will Bring You from the Nation's Capital

The little matter of 15c in stamps or coin will bring you the *Pathfinder* 13 weeks on trial. The *Pathfinder* is an illustrated weekly, published at the Nation's Center, for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 244 year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the *Pathfinder* is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the *Pathfinder* on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. The *Pathfinder*, Box 39, Washington, D. C.

### WEBSTER'S NEW INTERNATIONAL DICTIONARY

G. & C. MERRIAM CO., SPRINGFIELD, MASS. REGULAR AND INDIA-PAPER EDITIONS

Whatever your question;—be it the pronunciation of a new term; the spelling of a puzzling word; the location of Nigeria; the meaning of tractor, white coal etc.,—this New Creation contains a clear, accurate, final answer.

By WILLIAM I. HULL  
of Swarthmore College

An unanswerable indictment of military and naval "preparedness," in which it is shown to be its own judge and executioner.

Cloth. Net \$1.25.

WHAT THE WAR  
IS TEACHINGBy DR. CHARLES E.  
JEFFERSON

A book that gathers up in telling fashion the lessons which the red carnage of Europe should bring home to every American.

Cloth. Net \$1.00.

THE LIFE AND TIMES of  
BOOKER T.  
WASHINGTON

By B. F. RILEY

*Author of "The White Man's Burden," etc.*

This authentic life of the negro slave who rose against overwhelming odds is unique among biographies in American history.

Illustrated. Net \$1.50.

Skilfully drawn types of men who formed it, dramatically told tales of the incidents that marked it, together with some wonderfully vivid descriptions of the country in which it all happened, are the outstanding features of as fine a book of the North as has appeared in many a day.

Illustrated. Net, \$1.35

## "TAKE IT FROM ME"

By VANCE THOMPSON

The author of "Eat and Grow Thin" has written a book about "the other fellow." Coming as from man to man it will be found of fascinating interest.

Cloth. Net \$1.00.

THE TRAIL TO THE  
HEARTS OF MEN

By ABE CORY

A story of action and power, permeated with the spell of adventure, quickly moving, dramatic and glowing.

Cloth. Net \$1.35.

## CUPID IN OIL-SKINS

By J. J. BELL

The author of "Wee MacGregor" has written a story of war time in an English seaport town, of love and submarine-chasing, of delightful humor and grim determination.

Illustrated. Net \$1.00.

## WEB OF STEEL

By CYRUS TOWNSEND BRADY  
Father and Son

"Promises to be one of the season's hits."—*Spokane Chronicle*.  
Illustration and colored jacket by the Kinneys. Net \$1.35.

THE CASTLE OF  
CHEER

By CHARLES H. LERRIGO

*Author of "Doc Williams."*  
"One resounding note of optimism. A strong, inspiring, invigorating story, spicy with romance and humor."—*Continent*.

Illustrated. Net \$1.25.

BILLY TOPSAIL,  
M. D.

By NORMAN DUNCAN

The latest of the "Billy Topsail" books is a fascinating tale of adventure with "Dr. Luke of the Labrador," whose prototype, every one knows, is Dr. Grenfell. Cloth. Net \$1.25.

BILLY BURNS OF  
TROOP 5

By I. T. THURSTON

*Author of "The Bishop's Shadow," etc.*

A crackerjack story for boys of all ages.

Illustrated. Net \$1.00.

BOY SCOUT  
CRUSOES

By EDWIN C. BURRITT

An adventure tale of the South Seas which will take its place in the boy's heart next to "Treasure Island" and "Robinson Crusoe."

Illustrated. Net \$1.25.

"TELL ME A HERO  
STORY"

By MARY STEWART

*Illustrated in Colors by Samuel M. Palmer.*

Retells in clear, simple form some old stories found enshrined in mummy-cases and other out-of-the-way places. Delightfully illustrated.

Net, \$1.25.

hand wrought ring, an accident, and, finally, a trip to Europe.

Boulah Marie Dix has written an excellent tale of seventeenth century New England of a plucky little bound girl, *Blythe McBride*, who came from the slums of London, and won her way to freedom and a home in the new land.

*Polly Trotter, Patriot*, is not exclusively a girl's book for all its title. There are other patriots, boys and men in the stirring story of New York during the Revolution, by E. B. and A. A. Knipe, and not the least of these is Nathan Hale.

## JUST STORIES—FOR BOYS

The hero of Elbridge S. Brooks' new tale is a romantic *Son of the Revolution*, an Ohio lad who, fascinated by the wily Aaron Burr, is entangled in that traitor's mad scheme of empire that opened on the island of Blennerhasset and ended with Burr's capture at New Orleans.

W. P. Eaton's *Peanut-Cub Reporter* climbs the ladder of success fairly fast, but the reader on the way sees the working of the country and the city newspaper office, the way a reporter learns his job and the right and the wrong of it.

*Don Strong of the Wolf Patrol*, by William Heyliger, deals with Boy Scouts in a village and with a lazy fellow who waked up. *Billy Burns of Troop 5* was a Washington street lad whose Scout Troop helped through the fiftieth anniversary at Gettysburg when Scouts made themselves famous.

Baseball and football both have their innings in *The Unofficial Prefect*, by A. T. Dudley. It is the story of an American school with the plot centered about the team and the nine.

A good high school and college football yarn is *The Fullback*, by L. Perry, with the question of professional play for the crux, and "Sheridan twenty miles away" when the great game is called.

All sorts of interests besides athletics figure in E. A. Brown's *Archer and the Prophet*. It reminds me a bit of that one-time favorite, "St. Winifreds," tho entirely of today, and of an American "prep."

Following the *Lure of the Black Hills* while yet their only inhabitants were the wild creatures and wilder Sioux was a risky business, as D. Lange tells us. The Benton boys had dangers a-plenty, but remained boys, not supermen.

*Connie Morgan in Alaska*, by J. B. Hendrix, impresses one as the real thing. The men are not adventuring, they are simply facing the risks of life in the far north. And Connie is a *tillicum*. That's the name they give in Alaska to the fellow, or the dog, who stands by his friends.

## ABOUT REAL FOLKS

Swiftly told tales of stirring events that called for courage, endurance, generosity, self-sacrifice, fill the chapters of F. J. Gould's worth while book on *Worth While People*.

*Truly Stories from the Surely Bible* are not made over but are told in the King James version, only shortened by the omission of all unnecessary additions. They are from the Old Testament, the great old stories of Moses, Joseph, Elijah, Daniel.

*When I Was a Boy in Russia* tells of the life on a country estate where little Vladimir Mokrievitch grew up; how stirred by tyranny the youth became a "revolutionist," was sent to Siberia, escaped and finally reached Switzerland, where he now dwells, an exile.

The first story in S. M. Collman's *Tales from the Old World and the New* makes one wish that she would next turn her uncommon gift for showing that facts are as romantic as fancies to a short child's history of the United States.

A large book, nearly 500 pages, is *The Story of the United States* by M. L. Herdman. This has many colored plates and pays much attention to Indians and wars. An excellent child's reference book.

The new volume in the series *True Stories of Great Americans*, *La Salle*, is

## For Your Throat

When troubled with coughing, hoarseness, voice-strain, tickling in throat, or irritation in the bronchial tubes, place one of

BROWN'S  
Bronchial  
TROCHES

In the mouth—let it slowly dissolve, and get welcome relief. Irritation and tickling gradually lessen, cough ceases, voice clear—the vocal chords are eased and relaxed. Contains no opiates—safe to take. 25c, 50c and \$1 at druggists.

nuts and Shell Barks. Order Ten Pound Total

Carton Pecans today, \$2.50 Satisfaction guaranteed.

Southern Indiana Pecan Co.

236 3rd Street,  
Mt. Vernon, Ind.

no doubt a biography, but it is quite as much a whole book of Indian stories, hair-breadth escapes and romantic adventures not alone of La Salle, but of the fearless Father Hennepin and of Count Frontenac.

M. H. Wade in *Pilgrims of Today* recounts the adventures and struggles of six emigrant boys and one girl whose names have become well known in this their adopted land, Riis, Muir, Mary Antin, Schurtz, Pulitzer, Steiner and Nathan Strauss.

The *Boy's Life of Mark Twain* is full of entertaining incidents and Mr. Paine has made a living figure of the happy-go-lucky lad growing up in the middle west and of the witty and famous and good man he became.

How *Elizabeth Fry* by the simplest beginnings wakened England at the commencement of the last century to the horrors of the prison system is told by Laura A. Richards in a short life written for girls. The "angel of the prisons" was one of a noted family, the Gurneys of Earlham, "gay Quakers" whose household of young folk was a merry one. It is an inspiring book, the story of one of the noblest and most human of women who achieved miracles long before feminism was the fashion.

#### ADVENTURE NOW AND THEN

W. A. Johnston's *Deeds of Doing and Daring* tell marvelous and true stories of the builders of skyscrapers, the fighters of forest fires, the miners and other everyday heroes who make the world as we know it.

The *Boy with the United States Mail* opens with some chapters for stamp collectors and Mr. Rolt-Wheeler goes on to all sorts of exciting incidents in telling us how we get our letters.

Popularizing paleontology sounds difficult, but F. Rolt-Wheeler in the *Monster Hunters* makes a good story out of a boy's trips to Africa and to Wyoming in search of fossils with unpronounceable names but thrilling histories.

An Indian boy by adoption, J. W. Schurtz has told his paleface brothers many good Indian tales. *Apauk, Caller of Buffalo*, was a lad in the land and the days of the great buffalo herds. He was a fine boy, but it is a piteous story of the buffalo.

James O. Curwood has lived in the wilds and himself knew *The Grizzly King*. There are white men out for big game and Indian guides, but Musqua and Thor and the other beasts and the birds of the Great Divide are the main characters of this good story.

The version of the "Conquest of Mexico," arranged by H. W. Banks and gaily illustrated by T. H. Robinson, makes an exciting and romantic story. But why *The Boy's Prescott*? If girls are warned off from history why dedicate this attractive volume to three of them?

#### WHAT SHALL WE DO?

Besides programs for special festivities and descriptions of clever new amusements G. L. Davison had included in her *Games and Parties for Children* a long list, with directions, of the ever satisfactory old games, those so old that no one knows their beginning.

The *Jolly Book of Play Craft* belongs to the "rainy day" class. It is filled with ingenious suggestions for making sets of men and so on for all sorts of games out of pasteboard boxes, buttons, spools and wire. Making the games is as much fun, if not more, than playing them.

The *Boy's Book of Mechanical Models*, by W. B. Stout, directs to more complicated constructions, but these also demand only a few tools and such bits of board and cord and ends as are to be found in almost any house. Think of making a phonograph and an X-ray machine from bits of board rescued from the landings!

Two new volumes in a popular series are *When Mother Lets Us Draw* and *When Mother Lets Us Carpenter*. The explanation of perspective, composition, and other art terms in the first are simple and enlightening with attractive suggestions for subjects. The book on hammer and

## THE BEST OF THE NEW BOOKS

### H. G. Wells' New Novel—Now 70th Thousand MR. BRITLING SEES IT THROUGH

"The Great Novel"

THE MACMILLAN COMPANY, Publishers, NEW YORK

# Danger of Stomach Acidity and Fermentation

By ARTHUR TRUE BUSWELL, M. D.

EUGENE CHRISTIAN

If I were asked to sound a health warning that would be of the greatest possible benefit to mankind, I should say emphatically—"Beware of acid stomach." For acid stomach is the cause of fermentation which, bad enough in itself, is the forerunner of a hundred ills that sap the energy and vitality of its victims. I venture to say that ninety per cent of all sickness starts with acid stomach.

Nature provides hydrochloric acid as one of the digestive fluids, but too much of this acid causes fermentation, hurries the food out of the stomach and carries the acid all through the body. As a consequence, poisons (toxins) are formed which are absorbed into the blood, causing auto intoxication, nervousness, mental depression and countless ills of which this is but the beginning.

Every one of the vital organs in time become affected—the heart, the liver, the kidneys, the intestines, the nerves and the brain all decline, for the stomach is the Power Plant of the body. Even the teeth are affected by acid stomach, for the gums recede and pyorrhoea will be the result.

Stomach remedies only neutralize the acid because they are stronger than the acid. This ultimately ruins the lining of the stomach. The acid being neutralized is absorbed into the blood only to come back to the stomach in greater quantities at the next meal.

How much more sensible would it be to attack this disorder at its source. Instead of attempting to neutralize the acid after it has formed, why not prevent it from forming in the first place?

Superacidity is caused by wrong eating and the remedy must be found in the field of the cause—in eating correctly.

The individual sufferer from indigestion, acidity, fermentation, gas and such disorders has not carried his experiments with food very far. If he had he could easily cure himself as Eugene Christian, the famous food scientist, has proved beyond all doubt.

The reason which led Eugene Christian to take up the study of food in the first place was because he himself, as a young man, was a great sufferer from stomach and intestinal trouble.

So acute was his affliction that the best specialists of the day, after everything within their power had failed, gave him up to die. Educated for a doctor himself, Christian could get no help from his brother physicians.

Believing that wrong eating was the cause and that right eating was the only cure, he took up the study of foods and their relation to the human system. What he learned not only restored his own health in a remarkably short space of time, but has been the means of relieving some 25,000 other men and women for whom he has prescribed with almost invariable success, even though most of them went to him as a last resort.

Christian says that all stomach and intestinal disorders with their countless sympathetic ills—are caused by wrong selections and wrong combinations of food and that right combinations of food will positively remove every stomach and intestinal disorder by removing its causes.

No one would think of putting salt into an open wound, and yet we do worse than that when we keep putting irritating, acid-creating

food combinations into our stomachs already surcharged with acid.

The word diet is one which has an unpleasant sound—it makes us think of giving up all the things we like for those we have no taste for. But Eugene Christian's method is entirely different—instead of asking his patients to give up the things they enjoy, he prescribes menus which are twice as enjoyable as those to which the patient is accustomed.

Christian believes in good foods deliciously cooked—the kind all of us like best and which may be obtained at any home store, hotel or restaurant. He says that most of the things we eat are all right—but that we don't know how to combine or balance them.

Often, one food good in itself, when combined with another equally good food, produces an acid reaction in the stomach; whereas either of the foods alone or eaten in combination with some other food would have been easily and perfectly digested.

Unfortunately, each food we eat at a meal is not digested separately. Instead, all of the foods we combine at the same meal are mixed and digested together. Consequently, if we eat two or more articles at the same meal which don't go well together, there is sure to be acidity, fermentation, gas and all kinds of digestive trouble.

At Eugene Christian's New York office there is a constant stream of men and women who go to him for treatment after having tried everything else and rarely are they disappointed in the outcome. Some of the results he has attained read like fairy tales. I know of a number of instances where his rich patrons have been so grateful for their restoration of health and energy that they have sent him checks for \$500 or \$1,000 in addition to the amount of the bill when paying it.

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally that he has written a course of little lessons which tells you exactly what to eat in order to overcome the ailment which is troubling you.

These lessons, there are 24 of them, contain actual menus for breakfast, luncheon and dinner, curative as well as corrective, covering all conditions of health and sickness, including stomach acidity, constipation and all intestinal disorders from infancy to old age and all occupations, climates and seasons. They also tell you how to reduce and how to gain.

With these lessons at hand it is just as though you were in personal contact with the great food specialist, because every possible point is so thoroughly covered and clearly explained that you can scarcely think of a question which isn't answered. You can start eating the very things that will remove the causes of your disorder the day you receive the lessons and you will find that you secure results with the first meal.

If you would like to examine these 24 Little Lessons in Corrective Eating simply write The Corrective Eating Society, Dept. 412, 460 Fourth Avenue, New York City. It is not necessary to enclose any money with your request. Merely ask them to send the lessons on five days' trial with the understanding that you will either return them within that time or remit \$3, the small fee asked.

nails is as clever, with workable designs and clear diagrams.

*How Boys and Girls Can Earn Money*, by C. C. Bowsfield, emphasizes the "good ways" of beginning to earn. Many ideas fit the town youngster, but more are for the country dweller, both because healthful tasks are more frequent and varied in the country and because Mr. Bowsfield is a specialist in country living.

The editor of *Hunting and Fishing*, W. H. Miller, has written a *Boy's Book of Hunting and Fishing*. This is introduced by Dan Beard and is a thoroly practical book telling the kinds of tackle, of guns, of outfit necessary, and also possible to a boy of small purse.

## PEBBLES

After a while paper may be so scarce that shoe manufacturers can't afford to use it in soles.—*Des Moines Register*.

Chubbs—Have you heard Brown's latest joke?

Dubbs—Yes, it's rather worse than the other one he had.—*Judge*.

America has contributed \$28,000,000 to the people of war-stricken Europe, just to show them to what extent we are money-grubbing people.—*Dayton News*.

The Farmer—Say, don't you see that sign "Private! No Fishing Allowed"?

The Fisherman—I never read anything marked "Private."—*Brooklyn Eagle*.

The stories of the way those British "tanks" go over shell-craters and trenches will fill with envy the heart of every motorist who has tried to travel unimproved New England highways.—*Boston Herald*.

Uncle Silas (visiting city relatives who use electrical appliances for cooking at the table)—"Well, I swan! You make fun of us for eatin' in the kitchen. I don't see as it makes much difference whether you eat in the kitchen or cook in the dining room."—*Life*.

Newest of devices—one was exhibited recently at Atlantic City—is the pneumatic flag pole. The flag attached to it waves with a permanent wave, an immortal flutter. Now for the automatic hand-clapper and the dictaphone-cheer.—*F. P. A. in the New York Tribune*.

A humane society secured a downtown show window and filled it with attractive pictures of wild animals in their native haunts. A placard in the middle of the exhibit read: "We were skinned to provide women with fashionable furs." A man paused before the window and his harassed expression for a moment gave place to one of sympathy. "I know just how you feel, old tops," he muttered. "So was I!"—*San Francisco Argonaut*.

The reformer heard of a case which interested him more than the ordinary, so he sought out the reformed one and asked: "You stopped smoking because she asked you to?" "Yep." "And you stopped drinking because she asked you to?" "Yep." "And you stopped swearing because she asked you to?" "Yep." "And you gave up your poker parties and went into refined, so-called society for the same reason?" "Yep, yep." "And yet you never married her!" "Well, you see, after I'd reformed like that I found I could do better."—*San Francisco Argonaut*.

UNUSUAL GIFT BOOKS  
FOR YOUNG PEOPLE

## The Princess Pocahontas

By VIRGINIA WATSON

This beautiful gift book tells the story of a high-spirited thirteen-year-old girl—Pocahontas, daughter of the Virginia chief, Powhatan. How John Smith and the English came in ships that seemed like great birds; how they suffered; how the Princess Pocahontas befriended the strangers—this makes a fascinating romance, full of adventure, yet true to the records left by Smith and others. Small octavo, boxed, with rich cover, decorations and nine illustrations, in full color, by George Wharton Edwards.

Price, \$2.50 net

## Baldy of Nome

By ESTHER BIRDSALL DARLING

Baldy did not look like much of a dog when his little master, Ben, sold him to the lady who owned famous kennels of racing dogs in Nome, Alaska. But Ben's faith in him was justified when he saved the lives of his mistress and Scotty Allan, the driver of the racing teams. Then came his chance on a racing team. Baldy made good, and his name is famous throughout Alaska. This story is practically all true, and Baldy is a real dog. Illustrated with photographs, and decorated by Hattie Longstreet. Large 12mo.

Price, \$1.75 net

## Little Mother

By RUTH BROWN MacARTHUR

Mrs. MacArthur's little "Tannie," who finds a shelter, but not a home, under the roof of a wealthy cousin, will soon be the friend of thousands of American children. She may be appreciated just as much by the grown-ups who read her story, smile at it, and wipe away a tear. "Tannie's" rich nature cannot help winning the love of the reader, as it finally won her cousin's. Jacket in full color, color frontispiece, and other illustrations by Emlen McConnell. Large 12mo.

## TRAVEL AT HOME

Travelers of this year have not often strayed beyond the United States. Mrs. Gerould went as far as *Hawaii* and brought back four delightful essays on those lovely islands. Of one, however, *Molokai*, the home of the lepers, she gives us much more than a skilfully worded description. It is a study most delicate and faithful, which, less wisely wrought, might well have been morbid, disgusting or hysterical.

One does not commonly look for real thrillers in government reports, but hidden in a scientific quarto of 1875 published by the Smithsonian Institute, someone discovered Major Powell's diary, *First Through the Grand Canyon*. It is as exciting as a dime novel; there is a hairbreadth escape to every page and for sheer intrepidity, persistence and daring it will be hard to match this terse record of the three months' journey down the Colorado River. Aside from the fine adventure story thus rescued from oblivion, it is well that Major Powell and his gallant companions should, even after so many years, come into their own.

*Wild Life in the Rockies* is a second volume of Lieutenant Ruxton's "Adventures in Mexico." In this book his journeyings begin at Chihuahua, going northward to Colorado, then a hunter's paradise. The next spring he traveled by boat, stage coach and train to Chicago and New York and so back to England. All this was in '46 and '47 and the description of Mexico, of the plains still full of buffalo, of the eastern states and, also, the analysis of the Mexican temperament and point of view make this reprint well worth while.

One questions if *Our Hispanic Southwest* and *We Discover the Old Dominion* should not come under a review of art books, since the drawings in wash and line of Ernest Peixotto and of Walter Hale deserve attention for themselves. Mr. Peixotto writes the text that accompanies his studies of the old Spanish and Indian buildings, and these essays, beginning with New Orleans and covering wanderings in Texas, New Mexico, and Arizona and bringing to notice such wonderful and little known sights as San Xavier del Bac, without Tucson, and the vast bare church at Ancona, are as charming as the drawings and both make one eager to follow his trail among the Spanish missions.

One gets more of the Old Dominion from Mr. Hale's delicate but clear line work than from Mrs. Hale's lively but superficial pages. She writes about "we" rather than about what we

Majestic  
Coal Chute

Keeps the coal man from marring the sides of your home, protects your walk, flowers, lawn and shrubs. A glass door serves as a window, giving splendid light to the basement. It locks from the inside and is burglar-proof. It is extra durable, has a heavy steel body, semi steel door frame and boiler plate hopper. Every home should have one.

**Write for Free Book** Describing the Majestic Coal Chute and other Majestic Specialties: Garbage Disposers, Milk and Package Receivers, all metal Basement Windows, Rabbish Burners, Street and Park Refuse Cans, Metal Plant Boxes, Pops and Pipeless Warm Air Furnaces, etc.

The Majestic Co., 652 Erie St., Huntington, Ind.

"discovered" but Toby, a most engaging personality, was along, adding not a little to the gaiety of the trip and the enjoyment of all properly constructed readers.

After the north and the west, the east provides but tame reading, it must be confessed, but Paul Wiltstach has done an excellent piece of work in his careful history of *Mount Vernon*. It is a full and readable account of the estate, built from the family papers and it manages to make live the personality of Washington and the other members of the family to whom Mount Vernon was home. The book is well illustrated and should become an authority on the nation's Mecca.

Ex-Governor McCorkle's compilation on *White Sulphur Springs* suddenly makes one realize that we have in our midst watering places with picturesque histories after the fashion of Tunbridge Wells. Charles Dudley Warner's pretty tale "Their Pilgrimage" is set at the Virginia resort and reprinted in this volume; several papers of the early part of the last century show that a century ago the South, at least, held this a favorite pleasure ground. The war swept over it, but it endured all the changes of the years and, escaping the fate of Ballston Spa and Saratoga, is, in its second century, more popular than ever.

*The Old Seaport Towns of New England* sympathetically and gaily described by Hildegard Hawthorne in an attractively printed volume with drawings of J. A. Seaford. Beginning with Portland of many memories, she wandered down the coast and round the corner to Newport, to New London and New Haven. It is a tempting itinerary. Does anyone in America take such by the way sight seeing journeys save the happy folk who write the holiday books?

Theodore Dreiser and his friend the illustrator, Franklin Booth, took a motor trip from New York to Indiana, where both were born. A fat book is the result. One fancies it the sort of book an Englishman would find enlightening for it sets down with unadorned faithfulness the minutest details of life and conversation as these are in the middle west. There are, along the way, some thoughtful questionings of what we are seeking and whither tending but we might have had these, and verisimilitude of description, and yet omitted the incidental bad eggs in Rahway, or was it Harrisburg? It takes time to be short, but often it is worth while. Mr. Booth's sketches are too few, however.

Grown from some delightful magazine articles published years ago comes *The New York of the Novelists*, a handy bit of light erudition. Arthur Bartlett Maurice has gone beyond the New York of Curtis and Bunner and Hopkinson Smith and describes as well the city of Edith Wharton, of O. Henry, of Davis, of Edna Ferber and Chambers. Probably long after many of the stories it mentions are wholly forgotten this book will be of interest and use to those who know and love the great town with

The Most Important Art  
and Gift Book of the Year

# Vanished Towers and Chimes of Flanders

By GEORGE WHARTON EDWARDS

*Illustrated by the Author*

The war has swept away in Belgium historic buildings and towers whose priceless pictures, sculpture, and chimes cannot be replaced. Mr. Edwards, a recognized expert, has pictured and described here the dearest of these lost treasures—those in Louvain, Malines, Ypres, Nieupoort, etc. Never was a book more timely, seldom one so beautiful.

The paper is specially made for the book. Of the illustrations twenty-two are in full color and nine in sepia monotone. A book that any collector or art-lover will prize. Size, 8 by 11 inches, boxed. Price, \$5.00 net.

## THE BOOK OF BOSTON

By Robert Shackleton

The Boston that only one who has lived there knows. Mr. Shackleton finds it "a very human city, with pleasantly piquant peculiarities." Telling interestingly the things to be seen, he deals still more with that Boston which is "a state of mind"—its literary tradition and lecture habit, its ancestor worship, the "Boston Bag" and the "Sacred Cod"—and the things that make it a woman's town. Price, \$2.00 net.

## UNVISITED PLACES OF OLD EUROPE

By Robert Shackleton

Strange corners in the Europe that is passing—places seldom visited, but full of interest and charm—Liechtenstein, the Forest of Arden, Neutral Moresnet, Guernsey, the Scillys, sleepy Brenta, and many others. A unique book—a book of enthusiasms and a new viewpoint. Many sepia illustrations, and decorations by R. L. Boyer. Price, \$2.50 net.

## RECENT PUBLICATIONS

**THE REMINISCENCES OF THE RIGHT HON. LORD O'BRIEN, LORD CHIEF JUSTICE OF IRELAND.**  
 Edited by His Daughter, Hon. GEORGINA O'BRIEN. With Portrait. 8vo. \$2.50 net.  
 [Just Ready]

LORD O'BRIEN has much to say of sport and of prominent figures in the social life of Dublin, but the main interest of the book lies in his personal recollections. . . . being an honest and kindly gentleman and a good sportsman, he was popular even with his political opponents. He was something of a humorist himself as well as an admirer of humor in others. This book of reminiscences which has been carefully edited by his daughter, is full of entertaining stories. —*The Morning Post*.

**AN IMPORTANT BIOGRAPHY BY BISHOP BRENT.**

**A MASTER BUILDER.** Being the Life and Letters of Henry Yates Satterlee, First Bishop of Washington. By the RE. REV. CHARLES H. BRENT, D. D., Bishop of the Philippine Islands. With 16 full-page Illustrations and Portraits. 8vo. \$1.00 net.

"It is in all respects a most satisfying work." —*N. Y. Tribune*.

"The book is a powerful presentation of Bishop Satterlee's work in all of its marvellous breadth and variety, touching every aspect and interest of the Church in his time, and it is done with Bishop Brent's accustomed pith, point, grace and lucidity." —*The Churchman*.

**CUBA, OLD AND NEW.**

By ALBERT G. ROBINSON, A. G. R., Author of "Cuba and the Intervention," etc. With 22 full-page Illustrations from Original Photographs. Small 8vo. Cloth, ornamental. \$1.75 net.

"The author has studied Cuba twenty years as correspondent and visitor. The book will aid in an understanding of Cuba's problems and of her relations to the United States. Historically, descriptively and industrially it abounds in well-presented information." —*Outlook*.

**THE SPIRIT OF MAN.** An Anthology in English and French from the Philosophers and Poets Made by the Poet Laureate in 1915, and Dedicated by Gracious Permission to His Majesty the King.

Crown 8vo. \$1.50 net. India Paper Edition, \$2.00 net. Leather Edition, \$2.50 net.

"A unique anthology." —*Daily Graphic*.

"As a whole the collection is as admirable as would be expected from the poet's poet and the rare scholar who is now poet laureate." —*N. Y. Sun*.

"The most beautiful small anthology that we have handled since the *Golden Treasury* first came our way; and in no selection of the kind since Palgrave's have we found 'notes' at the close fuller of light and leading." —*Saturday Review*.

**SONGS OF CHILDHOOD**

By WALTER DE LA MARE (Walter Ramal). With Frontispiece. New Edition, with Additional Poems. Fcap. 8vo. Gilt top. \$0.75 net. Leather, \$1.25 net.

**THE CROWD IN PEACE AND WAR**

By SIR MARTIN CONWAY, Late Roscoe Professor of Art, Liverpool, Slade Professor of Art, Cambridge, President of the Alpine Club. Crown 8vo. \$1.75 net.

"The book is one of the most valuable issued in many months. The detail, always vital and never tedious, into which the author carries his analyses, the naturalness and vividness of his illustrations, and the epigrammatic style in which he writes, combine to hold the reader's interest tense through all the 332 pages, giving to a condensed and serious psychological study much of the fascination of a romance." —*The Nation*, N. Y.

**ARTISTS AND THINKERS**

By LOUIS WILLIAM FLACCUS, Assistant Professor of Philosophy in the University of Pennsylvania. Crown 8vo. \$1.25 net.

These essays are studies in the border-line relations of art and philosophy. They discuss the personalities, methods, and art theories of Rodin, Maeterlinck, Wagner, Tolstoy, Hegel, and Nietzsche, and trace a few of the variations of the problem: Is the Artist a Thinker, and the Thinker an Artist?

" . . . fresh and original, the literary manner is distinguished, and the collection of essays an auspicious promise of notable future achievement." —*N. Y. Nation*.

**THE ADMINISTRATION OF INDUSTRIAL ENTERPRISES.**

With Special Reference to Factory Practice.

By EDWARD D. JONES, Ph. D., Professor of Commerce and Industry in the University of Michigan, Author of "Economic Crises," "The Business Administrator: His Models in War, Statecraft, and Science," etc. Crown 8vo. \$2.00 net. [Just Ready]

The author's object has been to present in systematic review the methods of the general executive in operating a business of manufacturing type. Present standard American practice is the theme.

**LONGMANS, GREEN, & CO. NEW YORK**

its extraordinary ugliness and its surpassing beauty, as well as to visitors in its crowded and disordered streets.

John Lane Company. \$3. *New York of the Novelists*, by A. B. Maurice. Dodd, Mead & Co. \$2.

### TRAVEL ABROAD

Travel abroad nowadays is like to take the distinctly reminiscent form, and as such appear William Elliott Griffis' chapters on *Bonnie Scotland* and *What We Owe Her*. It is too much to ask for anything really novel on this storied land, but here is an admiring tribute, and written under such attractive chapter headings as *Heather and Highland Costume*, *Dundee the Gift of God*, *The Outpost Isles*. All the other recent books on sight seeing or adventure deal with the other side of the globe and few enough of these there are.

An uncommonly vivid piece of descriptive writing is Mary Ninde Gamewell's *Gateway to China*. This is Shanghai, "the quaintest little republic in the world." It has a polyglot municipal council elected by popular vote, there are courts of three different European nations, and six foreign post offices. There are schools and missions with all sorts of methods mixt up together. Altogether Shanghai as Mrs. Gamewell draws it is one of the most unexpected spots on the earth, queer even for China.

*An Irish Woman in China* records the ordinary daily life of a nurse and a doctor's wife, Mrs. de Burg Daly, whose home for twenty years was in Ningpo and New Chwang. It is an informal story, dealing little with the great political events of those years altho the spirit of the Russians and of the Japanese as she knew them, and adventures in the Boxer uprising are part of her story. A wise addition to the handy Wayfarer's Library is that classic by Isabella Bird Bishop, *Unbeaten Tracks in Japan*. It is rare to find a book of travel that has vitality to carry it beyond a first edition, but now and then appears an "Eothen" or a "Farthest North" or this series of letters written forty years ago. Mrs. Bishop was the first foreign woman to visit many districts of Japan. She traveled alone and set down sympathetically, faithfully and vividly sights and experiences, many of which travelers of today will hardly meet.

Two valuable additions to the literature of exploration are *With Scott*, the *Silver Lining*, and *The Last Voyage of the Karluk*. Griffith Taylor was one of the geologists on Scott's tragic last voyage. He was back in Australia when the fate of Scott and his companions was learned, and his story concerns the earlier days of the expedition and the explorations of his own section of the company. The giving much

## TWO IMPORTANT BIOGRAPHIES

**Cicero**

By Hannis Taylor

Author of "The Origin and Growth of the English Constitution," "The Origin and Growth of the American Constitution," etc.

This account of Cicero's life and times should appeal with peculiar force to the American people, embodying as it does a record of conditions so nearly identical with our own. Indeed, no reader can fail to be impressed by the close resemblance between Roman public life as it was in Cicero's time and American public life as it is today. Illustrated by reproductions of old and rare prints.

8vo. \$3.50.

**Ella Flagg Young** and a Half-Century of the Chicago Public Schools.

By John T. M. Manis

"Born the daughter of a mechanic, her early years a continual struggle for means of livelihood; Mrs. Young rose by sheer force of character and ability to the highest rank in her profession, and remains today after retirement from it a national figure in our educational system, the upholder of its highest standards and the protagonist of its progressive spirit."

—*Boston Herald, Illustrated*, June 3, 1916.

**A. C. McClurg & Co., Publishers**  
 Chicago

scientific information the book is mainly the story of a great adventure and the record of fine comradeship and of discomfort and danger gaily endured. The story of Stefanson's flag ship and of the final rescue of the survivors of the company is told by her master, Captain Bartlett, and set down by Ralph T. Hale. Between them they have certainly made one of the finest stories of life in the arctic regions ever published. The details of the daily routine, the daily forethought and the daily heroism are vividly described and many matters such as "how you hunt pemmican," usually left to the imagination of the ignorant reader, are made clear. It is a swift, modestly told tale of heroic adventure, as attractive for youngsters as for the grown ups to whom it is address.

*Bonnie Scotland*, by W. E. Griffis. Houghton Mifflin Company. \$1.25. *Gateway to China*, by M. N. Gamewell. F. H. Revell & Co. \$1.50. *An Irish Woman in China*, by Mrs. de Burg Daly. F. A. Stokes Company. \$3.50. *Unbeaten Tracks in Japan*, by L. B. Bishop. E. P. Dutton & Co. 40 cents. *With Scott*, by Griffith Taylor. Dodd, Mead & Co. \$2.50. *The Last Voyage of the Karluk*, by R. A. Bartlett and R. T. Hale. Boston, Small, Maynard & Co. \$2.50.

#### A FEW ART BOOKS

The most serious contribution from the illustrators this year is Joseph Pennell's pictures of the *Wonder of Work*. These etchings and lithographs are from the work of many years and are of varied excellence, some slight, many forceful and original. The idea behind them is well set forth in the artist's introductory essay and in the dedication to Meunier. But they speak for themselves. The scenes are from the world over and of great variety. There is a sense of vastness in the shadowy interior of the Krupp works; of terror in the blackness of the Charleroi furnaces; picturesqueness in the smoke and the white pillars of Leeds; a curious mixture of romance and reality in the bay of Baie; and in the American scenes, of Pittsburgh, Chicago, the far west, the expression of immense power and energy held in leash. The series is a contribution to social history as well as a gathering of sincere drawings.

Despite its vari-colored and highly calendered paper, the collection of illustrations in *Shakespeare in Pictorial Art* are of unexpected interest and suggestiveness. The artists began at Shakespeare's plays in 1665 and have been at them ever since, so that this series is in its way a review of the history of illustration. There is wide variety, from the Watteau-like cuts by Gravelet in 1752 past the pre-Raphaelites whose romantic paintings illustrate themselves rather than Shakespeare, to the inimitable Lear's Fool by Gillet and Spurr's real Touchstone. Here are Sargeant's terrible Terry as Lady Macbeth; Abbey's beautiful Viola and the Duke; Corot's three witches; and Sir John Gilbert's humorous title pages.

Several years ago was published, in two folio volumes, a most interesting study of English domestic architecture, "Homes of England." This is now

# The World in Reconstruction

## An Important Announcement

**T**HE world we knew three years ago is not the world we know today. Out of the titanic conflict of nations and the crash and smoke of battle have come conditions hitherto undreamed of. Huge problems beset the fighting nations of Europe and deeply concern America, their big brother nation overseas. America has been brought to realize, as never before, how much her life depends on that of every other nation in the world. America has prospered amazingly by the war. America in due time must suffer because of the war, despite the fact that nearly all the rest of the world will be her financial debtor.

How shall the resulting problems be solved? How shall the new conditions be met? How shall stricken Europe go on living when the killing stops and she quits dying?

How will her struggle back to peace and life affect us here? How shall we adjust our industries and our trade to meet the new conditions?

America has no more vital questions to be answered than these—and The Independent has no better work than to help illuminate the world's uncertain path during 1917. That is what gives added importance to this announcement of "The World in Reconstruction," a series of articles for the year to come by distinguished writers who will point out what the Great War has done to the World and how the resulting problems may be solved.

# **BUSINESS EFFICIENCY IN AMERICA**

Efficiency is the watchword of the hour. Never before has the necessity for individual, business and national efficiency for the United States been so apparent or so real. The Independent announces a twelve months' campaign for Business Efficiency in America to be conducted during 1917 by The Independent and the National Institute of Efficiency. This program will embrace twelve articles on Human Efficiency by Edward Earle Purinton, twelve editorials on Masters of Efficiency and twelve articles on broad aspects of Business Efficiency by members of the National Institute of Efficiency.

**F. W. DEVOE & C. T. RAYNOLDS CO.**

101 Fulton Street, New York

followed by a single volume on *Twenty-five Great French Houses*, from the religious fortress of Mont St. Michel and the robber palace of Pierrefonds to the smiling and peaceful Cheverny. There are not many topics that lend themselves to the impressive folio treatment, but the stately and romantic French palaces are among these, and the splendid page, the open type, the broad margins, the host of full page plates and the greater host of cuts of details make this study by F. A. Cook a thoroly delightful and valuable work on the Chateaux.

A great work on a little known topic is in two beautifully made folios on *Rajput Art* by Ananda Coomaraswamy, the text in one, the plates in the other. To most people this is an unknown world, a rich, marvellous, mystical world, where every line and tint and figure is of mysterious import. Here one gets the Hindoo view of life, and his whole philosophy, for art to him was not fancy, but the symbolic representation of the mysteries of life and death and the hereafter as he translates them.

Another folio of real interest is the translation of Jens Thiis's essays on *Leonardo da Vinci and the Florentine Year of Leonardo and Verrochio*. Here with a study of Leonardo's contemporaries, one finds over 200 reproductions of his paintings, his small drawings and pages of the marvellous sketch book which are not easy to come at, and which in their variety and casualness of subject make Leonardo a vivid personality.

Paul Gsell had the happy thought, knowing that to get Rodin to write a book was impossible, of gaining his consent to the setting down of a series of their conversations. Thus was *Auguste Rodin, Art*, built up and is now translated by Mrs. Romilly Fedden. It is an informal presentation of the sculptor's theories illustrated by over a hundred photographs from his works. A little stiff in manner at times, as copied conversation is like to be, there is a pleasant inclusiveness won by this method, and moreover it makes a real person out of the master.

Professor Hamlin's *History of Ornament, Ancient and Medieval*, was written primarily for students to whom its material has been often altogether inaccessible, and always difficult to come at. But while learned, and for the technical student, it is immensely interesting to anyone interested in art. It concerns itself with the meaning and the gradual development of decorative details, the forms peculiar to each land and in these traces the influence of neighboring races on one another's art. Turning the pages of this work shows one at once how much the mere onlooker is missing by his lack of comprehension of the genesis and intent of the conventionalized flowers and animals and geometric patterns that meet the careless eye on facade and wall and pavement, while for the designer such knowledge is imperative if absurdities are to be escaped.

Dr. Kunz has written the story of

*Ivory and the Elephant in Art, in Archaeology and in Science.* The first part of the book treats the purely esthetic side, the second of the elephant himself and the physical characteristics and preparation of ivory.

Beginning with prehistoric and ancient carved ivories, Dr. Kunz has traced ivory working, down thru the ages, and has given to his readers something far more substantial and interesting than merely hurried glances at medieval and modern carvings, oriental work, vegetable and imitation ivory, narwhal horns, walrus tusks, the so-called "whales' teeth," and the scrimshaw work done by American sailors. Like all Dr. Kunz's books, the volume is superbly illustrated, and is a standard.

*The Wonder of Work*, by Joseph Pennell Philadelphia. J. B. Lippincott & Co. \$2. *Shakespeare in Pictorial Art*, by M. C. Salaman. John Lane Company. \$3. *Twenty-five Great French Houses*, by T. A. Cook. Charles Scribner's Sons. \$16. *Rajput Painting*, by A. K. Coomaraswamy. 2 vols. Oxford University Press. \$34. *Leonardo Da Vinci*, by Jens Thiis. Boston. Small, Maynard & Co. \$12. *Auguste Rodin, Art*, by Paul Gsell. Boston, Small, Maynard & Co. \$3. *History of Ornament*, by A. D. F. Hamlin. The Century Company \$3. *Ivory and the Elephant*, by G. F. Kunz. Doubleday, Page & Co. \$7.50.

### GOTHIC ARCHITECTURE

Tho to be a wise critic of pictures one need not be a painter, it is to the working architect, witness Vitruvius, Palladio, Severy, George Street, that builder and archeologist must go to school if they would interpret Roman, Renaissance and Spanish building. Sir Thomas Graham Jackson has had a long and honorable career in his profession and he crowns his days with what is perhaps the best book in English on its topic, *Gothic Architecture in France, England and Italy*.

It is not hard to solve the apparent paradox and make out why, when the painter too often writes with petulance and *parti pris* and unintelligence, the working architect should speak both wisely and nobly of all the great unperished past. It is his good fortune to draw so constantly, not for decoration only, but for essential structure, on that goodly heritage that he is not able to think himself very much wiser than his fathers; and it is his happy necessity, that, dealing as he must with the primary qualities of matter these essential problems impose on him gravity, sincerity and uprightness of mind. This is the temper of these two volumes, the complement of an earlier one on Byzantine and Romanesque, and the outcome of long study that circled especially about the Adriatic and included not merely the sketching of ruins but the repairing of structures. We owe the preservation of precious morsels to Sir Thomas Jackson.

Everywhere his English training has opened his eyes to the significance of moldings, a matter less important to the French architects, like Viollet-le-Duc, and his professional preoccupation has led him to seek explanation and interpretation in the conditions of material and form. In the little book on "Reason in Architecture" he had pushed this bias to the point apparently

## LIPPINCOTT BOOKS

of denying the spiritual or emotional factor in the genesis of Gothic form, forgetful that, like a sacrament, art has both the outward visible form and also the inward spiritual grace, that both co-exist in a preestablished harmony and neither can withdraw without ruining the whole. But here, being rather historically minded than controversially, he is content to analyze and explain and praise not unworthily nor yet fulsomely, but with discrimination and insight, and adding his own drawings in lieu of photographs, he makes a work invaluable alike to the student of art and to the professional architect mainly concerned with questions of construction.

*Gothic Architecture in France, England and Italy*, by Sir Thomas Graham Jackson. University of Chicago Press. 2 vols. \$14.50.

## THE REAL FRANCE

Entirely superfluous is Elizabeth Shepley Sergeant's prefatory excuse for publishing her *French Perspectives* during war period. These delightfully informing sketches of French bourgeois character and domestic scenes would be welcome at any time. Take the Ravnagacs and their conviction that American life is a perpetual picnic, Marie-Constance, the little milliner, who, in spite of her hard existence, stoutly maintains that romance is truth, Mlle. Marcelle, the tireless worker in the cause of woman suffrage, and many others, including a glimpse of the intellectuals, all charmingly and faithfully drawn with the skill of an accomplished artist. Toward the close the author foreshadows the inevitable coming of war in the return of militant patriotism, which gripped even those who had previously been among its strongest opponents.

*French Perspectives*, by E. S. Sergeant. Houghton, Mifflin Company. \$1.25.

## FRANCE AND ENGLAND

It is exceedingly interesting to compare *A Woman's Diary of the War*, by S. Macnaughton and *A Frenchwoman's Notes on the War*, by Claire de Pratz. Both books treat of the first months of the war, and each woman is profoundly impressed by the rebirth of the soul of her nation, the splendid spirit of unity, the forgetfulness of political and class distinctions. Miss Macnaughton went to Belgium with the British Red Cross. She tells of her experiences there and of the effect of the war on her countrymen at the front and at home. Her book is personal and vivid but of less distinction and value than that of Mlle. de Pratz, which is a remarkably able delineation of the spirit of France.

Mlle. de Pratz was in a Breton village during the mobilization, later in Paris. She describes with enthusiasm and with skilful pen the response of the French to their country's call; their eagerness for *La Revanche*; their, to a foreigner, unexpected depth and seriousness. She writes with special admiration of the women of France, their adaptability in filling the places of the men.

*A Woman's Diary of the War*, by S. Macnaughton, \$1. *A Frenchwoman's Notes on the War*, by Claire de Pratz, \$1.50.

The temperature in the home can be kept exactly as desired both day and night, and the family set free from all worry and attention to drafts and dampers if the heating plant is controlled by

**The MINNEAPOLIS' HEAT REGULATOR**

Simple in operation; automatic in action; reliable; one of many steps—a marvel of convenience. Insures safety and saves fuel. Used with any kind of heating plant, hot water, hot air, steam, vapor or vacuum. The standard for 31 years. Sold by the heating trade everywhere under a positive guarantee of satisfaction.

## FOREIGN FRAGMENTS

During the first year of the war, the Netherlands wallowed in gold; from 150,000,000 gulden, the Treasury's yellow metal reserve rose to nearly 600,000,000. But soon the country found itself between the devil and the deep sea, i. e., between the clutches of Germany and the fangs of England, and the flow of gold gradually ceased.

The Dutch Colonial Army, at present fully mobilized, consists of 200,000 men, of whom about 50,000 are Dutchmen.

A polyglot Chinaman, Mr. Sung Tsung-Fan, is twenty-three years old. He occupied until recently an editorial position on *La Tribune* of Geneva, being at the same time correspondent of *Le Bonnet Rouge*, of Paris. Besides his Chinese mother tongue, he speaks Japanese, English, French, Italian and German. Born in Shanghai, he was sent to Tokio at the age of seventeen to complete there his education. After a four years' study at the University of Geneva, he obtained there the M. A. degree. In Florence he studied painting.

Owing to the lack of British competition east of the Suez Canal, Japan dominates, at present, the coal market along the coasts of the Pacific and Indian Oceans.

The same lack of foreign competition favorably influences the machine industry; Japan is now flooding the markets of China, Australasia, British India and Asiatic Russia, mainly with electrical and textile machines.

Japan's consumption of steel and industry has enormously risen thru the ammunition orders received from Russia and the other Allies. It now reaches 1,200,000,000 tons, of which 300,000,000 satisfy the domestic consumption. China and Corea mainly furnish the raw product.

Of the fifty new steamers added to the Japanese-American transit in 1915, twenty-two are newly built and fifteen of Japanese make.

"It was Chancellor Caprivi, successor of Bismarck, who first made the 'German Bay' really free by acquiring Helgoland, one of those rocky nests wherefrom England spread her polyparms over the seas." From an address by Dr. W. von Bissing, professor of history at the University of Munich, president of the Munich Academy of Sciences.

Jews are today fighting each other in all the armies of Europe. Russia alone has over 350,000 Jewish soldiers; Austria-Hungary over 50,000; Rumania over 20,000. In brief, a total of about 500,000.

Since 1718, when King Charles XII of Sweden practically committed suicide, no ruler has ever died on the battlefield.

Thirty years ago France's relations with England and Italy being of a rather precarious nature, Lefebvre de Behaine was sent, February 15, 1887, by the French Government (cabinet René Goblet) to Prince Hohenlohe, German Chancellor, offering a Franco-German alliance!

It may not be out of order just now to remember the visit Emperor William paid, some years ago, to the American fleet, sent on its famous round trip by President Roosevelt. The Admiral and his officers admired the enormous interest the Emperor took in the most minute details of the machinery; but they were genuinely shocked when he returned, this time accompanied by a couple of his experts, who filled their notebooks with their master's and their own observations.

Very shortly after the beginning of the great war one noticed the departure of the animal world from the affected districts. The first to leave their native haunts were the boar, the badger, the roe buck and the deer. Curiously enough, the hare, as if to give the lie to his bad reputation, remained in his burrow. The pheasant, bent-neck and wild duck could not stand long the noise of the large Krupps and Skodas. Brother wolf, the German legend notwithstanding, left the battlefield at an early moment. The singing birds

**GROWING OLD GRACEFULLY**

The key to health in old age is the *prevention* of bowel disorder.

Constipation, which becomes more and more chronic with advancing years, frequently makes the burden of old age seem heavy indeed. Yet in most cases constipation can be entirely prevented by a little care in the matter of diet and by supplying in Nujol an efficient substitute for the mucus which exhausted nature no longer provides.

Nujol is not a bowel stimulant. It acts as an internal lubricant, softening the contents of the intestines and so promoting normal evacuations. Your druggist has Nujol. Avoid substitutes. Nujol is sold only in pint bottles bearing the Nujol trademark.

## Your Christmas Present

Turn to page 359 of the November twenty-seventh issue of The Independent and note the big features of the Christmas Number of The Countryside Magazine. Then, if you think you would enjoy a magazine of that type and if you are a subscriber to The Independent, just drop a postal card to W. W. Ferrin, c/o The Independent, 119 W. 40th St., New York, and he will send you a copy free of all charges as your Christmas present from The Independent.

(finch, nightingale, lark) continue to build their nests in their habitual haunts, mingling their song with that of the 42 and 75.

The most disastrous effect of the war upon the world's fauna concerns, however, the *Aurochs*, whose two principal herds were kept in the forest of Bielowieja, between Bieloostock and Brest-Litovsk, and on the estate of Count Potocki, in Volhynia. In both places the war raged with great violence in 1914-15. Some of the animals died from hunger, others were struck by the German shells. Thus, an animal species which has been with us since the quaternary period, has been extinguished.

The French Governor of Indo-China has lowered the reward for tiger killing to \$4 apiece. The happy hunter is, however, entitled to the skin, worth about \$15.

The reconquest of enormous territories is now going on in spite of the war in Turkestan and the Caucasus. In the first of the two countries a canal of 140 kilometers in length, and a depth of seventeen to thirty meters, is being dug on the left bank of the Syr-Daria (the Iaxartes of the ancients), in order to irrigate the steppe of Goldnaya, stretching between the river and the Samarkand-Kokan Railroad. At the expense of \$3,000,000, 49,000 hectares have been added to the 13,000 made cultivable at the end of the last century. Similar work is done along the Caspian Sea, south of Baku. Here nearly 350,000 hectares will be redeemed.

The French Colonial Empire embraces about 10,000,000 square kilometers with a population of 50,000,000: 10,000,000 Arabs and Berbers in North Africa; 15,000,000 natives of Indo-China; 3,500,000 of various races in Madagascar; 20,000,000 to 22,000,000 of negroes in West and Equatorial Africa, etc. There are about 1,500,000 whites; 650,000 of French origin; 260,000 naturalized Frenchmen; 300,000 belonging to various European nationalities, mainly Spaniards and Italians.

C. I. Cid, of Quebec, has invented an apparatus which consists of an ordinary thermometer, plus three bells, an electrical lamp and a *jet d'eau*. It is installed in an apartment, let us say, with the temperature of 70°. The thermometer is set at 80°. If fire breaks out and the temperature of the room rises to 80°, an electrical bell gives the first alarm, and the electrical lamp is lit to guide the tenant and firemen. If the heat of the room reaches 90°, a second alarm rings. Same procedure with 100°. The apparatus can be connected with some neighbor's house or the fire station. At 140° the "sprinklers" begin their work over a maximum area of eight square feet. The bells ring and the water flows until the fire is put out and the temperature of the room becomes normal again.

All of us know, of course, that, in general, man is larger than woman. But many will be surprised to learn that this male superiority dates from the very first day of man's appearance on this world: The boy baby is one centimeter taller than the girl. We do not grow in regular succession. The body reaches its first full development at the age of 2 to 5 years; first period of growth, 6 to 8; second period of full development, 9 to 11; second period of growth, 12 to 16. Period of consolidation, 17 to 25. The young girls reach their maximum height at the age of 18; man at 25. In certain races, the body continues to develop until the age of 30.

The weight grows normally from birth to maturity and the maximum, in the majority of cases, is reached long after the maximal life has been secured. With man: at the age of 40; with woman, about ten years later. From these dates on, the weight decreases. Certain sicknesses, however, cross this rule. We grow quicker in summer than in winter. Children, generally speaking, grow less from September to January; more from February to June, reaching the maximum growth from June to August. The influence of the temperature is more accentuated in the northern climates.

## Independent Opinions

More than one of our colored readers have written calling attention to the injustice of the present administration toward the negro. We select for print the letter of the professor of the social sciences in Shaw University:

The election is now over, but your final campaign editorial yet rings in my ears and brings to mind the eternal question which the American people are afraid to face squarely.

Your comparative estimate of the personal qualifications of the Democratic and Republican candidates pays President Wilson a tribute that he surely does not deserve. You characterize President Wilson as a man of broader human sympathy than Mr. Hughes. Obviously a new interpretation is given the term sympathy, or you have pushed beyond the pale of humanity 10,000,000 Americans. To come to the point, if sympathy is feeling with one's fellows, sharing with them their fortunes and misfortunes, it has no abiding place in the breast of our President. When Mr. Wilson came into power he found a small number of negroes holding appointive offices in the Federal Government. These he ruthlessly removed without regard to merit. In more than one instance he did violence to the civil service rules that he might vent his spleen upon the negro. He set up a Jim Crow government at Washington and left not a stone unturned to humiliate the negro, to make him feel that he is not a part of the body politic. The well nigh unparalleled progress of the negro since emancipation does not impress Mr. Wilson. The cry for justice by a race struggling to surmount the barriers of prejudice imposed by the dominant race does not move him. The lynching of negro women and children in the states whose electoral votes make possible the election of a Democratic President evokes from him not a word. How strange is the sympathy of Mr. Wilson! And stranger still he solemnly promised to be the President of all the people.

WM. S. TURNER

Raleigh, North Carolina

Our column of "Remarkable Remarks" is more widely quoted than anything else in the magazine, but it has been the cause of much perplexity to some of our readers. A Canadian bar-rister writes us as follows:

In almost every issue of your publication you publish a column styled "Remarkable Remarks." It is my firm opinion that these are selected by your office boy, al-though I can scarcely credit even the office boy with such an entire lack of horse sense or humor. I should be very pleased if you would confirm my opinion in this regard, as this column has been a constant source of wonder—not to say annoyance—to me ever since The Independent has come under my notice.

In the very remote event that they should be selected by anyone else, the only explanation I can think of is that you use the word "remarkable" in its widest sense and intend this column to include remarks which are striking for their perspicuity, humor or sanity, as well as those which are striking for their density, fatuity or idocy. But why publish the latter? I can illustrate my meaning perhaps best by a quotation from your issue of the 9th. The Crown Prince William Frederick is alleged to have made a remarkable remark to wit, "The common soldier is a human

## Make This Christmas Memorable

You are searching for a gift this Christmas that will be of permanent value. You want it to stand out from the ruck—to carry the message of your personality—to be a tribute to the intelligence of its recipient.

You need look no further than

### THE NEW INTERNATIONAL ENCYCLOPAEDIA SECOND EDITION

To possess the New International is to have that grasp of affairs that distinguishes the successful man or woman. When you give the New International you are giving more than twenty-four beautiful volumes crammed full of vital facts on every subject. You are giving the opportunity for a more abundant life.

It is because of the possibilities that are behind the ownership of the New International that your gift will be gratefully remembered long after the others are forgotten.

*Business Men* will go to it for that definite knowledge of events that are shaping the world today.

*Scholars and professional men* everywhere will find this masterpiece of American scholarship a veritable necessity.

*Women* of the family will find the New International provides the means for entering into the broader life that is their rightful inheritance.

*Children* are indeed fortunate if they can have for their education so fascinating a background as the New International.

Owing to Strikes and other unforeseen delays in publishing vols. 23 and 24, we have decided to allow Christmas purchasers the benefit of present low introductory price.

80,000 articles—(30,000 more than any other encyclopaedia) covering every subject of human interest written in compact, understandable manner. Every subject has a separate article—there is no searching through complicated indexes.

**Illustrations**—that really illustrate in colors, and black and white, splendid portraits, reproductions of masterpieces, etc.

**Bibliography**—at the end of every important article there is a list of books on the subject for further reading, invaluable to the student.

**Thoroughly International** in character and scope; treating more American and foreign subjects than are to be found in any other Encyclopaedia.

**War Articles**—The New International is the only encyclopaedia written since the great war began. The causes and progress of the world struggle are analyzed and discussed by authorities in a special 75-page article.

**Thin Paper**—durable and easily handled. For school, college and library use a special binding of library buckram is provided.

Mail the coupon today for descriptive booklet, specimen pages, maps, illustrations, courses of Reading and Study, all of which we will gladly send you free of charge. But do it now before Christmas plans interfere.

## Auto-Intoxication—Dangers and Relief

Sent for your  
FREE  
examination

A hazy feeling—dullness—half headaches—inability to think—these come from stupefaction, or partial paralysis, of your brain by poisons generated by food waste, fermenting in your colon—the lower part of your digestive tract. This is called "auto-intoxication"—that is, intoxication from poisons generated inside the body. Indigestion and constipation are its symptoms. It may lead to nervous exhaustion, high blood pressure, liver and kidney disorders and sometimes malignant growths. A clean colon, doing its work thoroughly and well, is easy to have, however. Dr. Kellogg tells you about this in his new book—"Colon Hygiene." It teaches natural methods only—diet, exercise, rest, sleep and regulation of working hours. No drugs. Following its teachings will give you permanent relief from indigestion, constipation and their attendant ills. Thus you may regain bodily comfort and have a keen mind, renewed energy, a clear eye, and abiding health. Send the coupon for a FREE examination of the book. Over four hundred pages—many illustrations—substantially bound—only \$2. Get this book and do yourself for all time the damage of indigestion, constipation and auto-intoxication.

Examine it FREE first. Send Only the Coupon—No Money

GOOD HEALTH PUBLISHING CO.  
312 Main St., Battle Creek, Mich.

Send me "Colon Hygiene" all charges prepaid. I will return the book, or send you \$1 with a five cent note. While your name, address, and business or profession are in the coupon, no charge.

## Will You Accept This HUMIDOR?

Size of Humidor  
10 1/2 x 7 1/4 x 4 1/4.

Your first order for 50 Detrick Perfecto Cigars at \$2.50 brings you this metal made, Mahogany finished, handsome, durable cigar-keeping humidor. I am offering it as an inducement for you to try my cigars—its value prohibits giving it with any but the trial offer.

### Detrick's Perfecto Cigars

are of the finest possible quality, imported Sumatra wrapper, rich, even burning, hand made by experts. Direct from factory to you—you get the middleman's profit. Cigars their equal, cost you 10c each at your dealers.

**My Proposition** Order a box of 50 Detrick Perfectos at \$2.50, stating color preferred, and I will send with the cigars, the handsome, useful humidor as described above, all charges prepaid. Sample these cigars just as freely as you wish—let your friends try them—if they are not up to your expectations—if you are not delighted with their quality, return the remaining cigars and the humidor and we will willingly pay back your \$2.50.

You need not send money in advance if you have commercial rating.

I am so sure of the merits of my cigars—so sure that you will want to smoke them regularly—so sure you will get the best smoke for your money you have ever had—that to get you to TRY THEM, I am giving you this Humidor.

This is no youthful concern—I have been in business thirty years and refer you to any commercial agency for my financial responsibility.

J. F. DETRICK, Pres.

**DETRICK CIGAR CO.**  
127 S. Ludlow St. Dayton, O.  
On orders west of Rocky Mts., add 50c extra for delivery of humidor.  
Descriptive literature sent on request.

## A High School Course In Two Years

Learn in your own home. Here is a thorough complete, and simplified high school course that you can finish in two years. *Makes all college entrance requirements.* Prepared for leading members of the Association of Universities and Academies.

Write for booklet. Send your name and address for our booklet and full particulars. No obligation. Write today—now.

American School of Correspondence, Dept. P-2489 Chicago, U. S. A.

being as I am." Now surely this is sheer drivel, and to be inserted in a paper making claims to sanity, published in a democratic country, is quite inexcusable.

EDWIN B. ROSS

Vancouver, Canada

Mr. Ross is a true Britisher. That is to say he sticks at a problem till he works it out. He states the case exactly when he surmises that our intent is "to include remarks which are striking for their perspicuity, humor or sanity, as well as those which are striking for their density, fatuity or idiocy." We simply quote the remarks as "remarkable" and leave it to our readers to divine into which category they fall. Often we do not know ourselves.

Here is another reader who has detected nonsense in that column:

One of the "Remarkable Remarks" in The Independent of November 6 is this of King Constantine: "The holy ikons that have protected you in the past will protect you in the future." What childish nonsense! During the Russia-Japan war, Pop Tcherbakoffsky, holding aloft an ikon before the regiment of which he was chaplain, was plugged by three pagan bullets, fired by Japanese.

S. WIGGINS.

New York

Isn't it important to know what sort of opinions the German Crown Prince and the Greek King hold, even tho we are not impressed by their brilliancy? Anyway the office boy can prove an alibi in these two cases, for they were picked out by the editor in chief.

We really shall have to drop the word "first" out of our vocabulary, for whenever we use it we get into trouble. Here is an instance:

Your article concerning "Electric Harvesting," in the issue of November 13, 1916, was too sweeping. This is not the first electrically driven threshing machine in the United States, or even in the West. For the past three years, at least, F. C. Krotter Company, of Palisade, Nebraska, have owned and operated just such a machine on their ranch in that vicinity, the power being drawn from their own plant.

P. H. PERSON

Kearney, Nebraska

The blunder of Donald Wilhelm writing about "The Candidates in College" on October 16, in alluding to Woodrow Wilson as "son of a Methodist minister," was caught by a host of readers, but the president of San Antonio Female College who corrects from personal knowledge, has surely the right to the floor. We hope that mistake did not have any serious influence on the voting either way:

At Clarksville, Tennessee, in 1889 I was the pastor of Madison Street Methodist Church and Doctor Joseph R. Wilson was Professor of Theology or Bible in the Presbyterian University located in that city.

Dr. Wilson and I were about as good friends as a distinguished and elderly Presbyterian minister and a young and undistinguished Methodist preacher could well be. One morning I met Dr. Wilson on the street. He seemed to be in a good humor. He said, "I have come into a new experience today." I replied, "Doctor, it seems to be a pleasant new experience." "It is," said he. "Woodrow has heretofore been known as the son of Doctor Wilson. Today I waked up to the fact that I am now known as the father of Woodrow Wilson."

J. E. HARRISON

San Antonio, Texas

## Could You Fill His Shoes?

Suppose a good job were open where you work. Could you fill it? Could you jump right in and make good? Or would the boss have to pass you up because you lacked training?

Don't take chances on being promoted. If you want a job that pays good money, get ready for it.

Pick out the job you want in the work you like best. Then start *right now* to get, through the International Correspondence Schools, the training that will prepare you to hold it.

Thousands of men have advanced through I. C. S. training to the very jobs they wanted. What these men have done you can do. All the I. C. S. asks is the chance to help you. No matter where you live, the I. C. S. will come to you and train you in your spare time.

The job you want is within your reach. I. C. S. training will win it for you. The thing to do now is to make your start. Here's the coupon—mark and mail it now.

MOTOR  
PROGRESSBy  
John Chapman Hilder

THE old order is rapidly changing. And, as is quite common when old orders change, many people are benefited. The old order I have in mind is the unprofitable habit of putting up one's car for the winter. It is unprofitable because it is equivalent to taking interest-earning dollars out of the savings bank, or out of safe investments and keeping them, idle, in the old family sock.

That a motor car is an investment no one will deny. It represents a considerable sum. You realize, when you buy a car, that you are tying up a goodly amount of cash in it, but you part with this money willingly enough because you know you will receive ample return in those peculiar joys that motors give their owners.

When you buy a car you expect it to run pretty consistently. If a salesman said to you: "You understand, of course, that this machine will not work on Sundays and holidays," or "this automobile will run only in the mornings," would you accept the statement calmly and buy the car?

Not by a hatful.

You would most probably invite that salesman to drive his car to the ocean and keep on driving.

Yet what difference is there between having a car that won't run week-ends and putting your car in cold storage for four or five months—from the viewpoint of the return on your investment?

In the words of all stump speakers, "I pause for a reply."

Even if yours is a touring car, there is no need to cheat yourself of over a third of its working power. For a very moderate sum it is possible to buy a detachable top which will turn it into a closed car in about fifteen minutes. And a most presentable closed car at that. If your mind boggles at the thought of a detachable top, put up the regular collapsible top, adjust the side curtains, buy a heavy overcoat, or a leather coat, fleece lined, or a robe or two and some woolen socks and gloves. Innumerable heaters are to be had at small cost—steering wheel heaters, heated foot rails, hot air registers, portable heaters and so on almost without end.

The movement to promote year round motoring has been steadily growing with the increased facilities for its enjoyment. Manufacturers are making closed cars for year round sale in constantly augmented numbers and varieties.

The most recent and popular development in the promotion of year round motoring is the convertible body—closed

in winter, open in summer. In all its forms it is an example of that ingenuity and practical inventiveness which has been one of the most potent factors in the spectacular growth of the entire automobile industry in America.

Chief among the convertible bodies now in favor is the sedan, which is little but an enclosed touring car meant to be piloted by a member of the family. In some-models the entire top, with windows, is a separate unit which fits neatly into the touring body. In others the top is permanent but the window sashes are removable. Both types have their advantages and their weaknesses. But both are good. Next come the convertible coupe, the coupelet, and the cabriolet—which are to the two and four passenger roadsters what the sedan is to the touring car. Choice among those types is merely a matter of taste and personal requirements. They are all splendid aids to year round motoring.

A point worth mentioning is that you need not be deprived of the use of your car even if it should be two or three years old. There are detachable tops to fit almost anything on wheels, regardless of vintage.

The enjoyment of winter motoring rests largely on a moderate expenditure for accessories, coupled with a few commonsense precautions in operating the car.

LET us consider for a moment just what effect cold weather has upon the car. The most obvious thing that comes to mind is that the water in the radiator may freeze and cause a breakage when the motor is started up again. Worse than that, if the water freezes it may freeze somewhere in a water-jacket, and when you start up again, and the engine gets hot, you are liable to have a waterjacket cracked. No matter where the freeze may occur, it is pretty certain to cause a more or less serious leak. The best preventive for a frozen cooling system in the daytime—or rather when the car is not in the garage—is a ready-made radiator and hood cover. There are several makes on the market nowadays, one virtually the same as the rest. They are made to fit the hood and radiator shapes of nearly all American cars, and not alone do they cover the machine more thoroly, but they look many hundred per cent better than the old-time horse blanket, bear robe or newspaper.

Covering the hood and radiator of a car that has been running and is standing at the curb with the engine stopped is good practise because by keeping the engine warm it makes re-starting easy. It may be well to remind you, however, that when you leave your car at the curb with the engine running the radiator should not be covered.

In winter it is even more important than in summer to give the storage battery the care it needs. One of the easiest ways to save the battery is to help it by keeping the engine warm overnight, so that starting will be comparatively easy in the morning. During the winter you will probably run at lower speeds on the average than in summer.

# MAZDA

*"Not the name of a thing, but the mark of a service"*

As the turbines draw from Niagara the energy that sets the motors whirling—so MAZDA Service draws from the flood of new thoughts in lighting, the ideas that help the lamp-makers make better lamps.

4639

## —The Meaning of MAZDA—

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York. The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

The Original Food-Drink for all ages.  
More nourishing than tea, coffee, etc.  
In the home, or at Hotels and Cafes.  
Substitutes cost YOU Same Price.

## What do you hire stenographers for?

To produce finished letters.

Then why don't you let them do it! They cannot produce finished type-writing if they are called away from their typewriters a couple of hours a day, answering the buzzer—to sit in on tedious, time-devouring, money-eating sessions of shorthand dictation.

It is about time you decided you have had enough of the extravagance of shorthand. It is high time you found out that there is no percentage in having your letters written *twice*, once in shorthand and once on the typewriter.

It certainly is time that you dictated to The Dictaphone and have your letters written *once*, on the typewriter—and have more of them and better; and at least a third less in cost.

Dictate to The Dictaphone and that's what will happen to your correspondence. To say nothing of a *convenience* in dictating that will amaze you.

Sound like mere assertions? Well, make us prove them!

Reach for your telephone and call The Dictaphone, and arrange for a demonstration on your own work. If you do not find that name in the book, write to

## Concentration Spells Success

*When rightly used, but when wrongly  
used is sure to bring failure*

Andrew Carnegie, Henry Ford, James J. Hill, John Wanamaker, Theo. N. Vail and others whose names are synonyms for success in the business world, owe their success to the **Power of Concentration**. This power is the inherent possession of every life, but few persons ever learn to use it right. That is what makes **BIG** business for the few and little business for the many.

**"Concentration —Its Mentology and Psychology"**

By F. W. SEARS, M.P. (Master of Psychology)

teaches how to develop and use the **Power of Concentration** rightly.

The person who can concentrate rightly for what he wants, when and where he wants to—whether it is for money, health, love, increased business, a better job, political power, social position, good memory or anything else he may desire—has at his command the greatest power in the world, a power which, when he learns to use it rightly, gives him the mastery of himself and his environment, and makes his body strong, healthy and vigorous.

You have this **POWER** and can learn to use it rightly by persistently applying the lessons taught in this book. No matter how many books you may have read, this book is different. You need to learn the lesson it teaches. Price 50 cents postpaid. One and two cent stamps accepted. Worth a thousand dollars. Money back if you want it.

Make your order, whether by mail, or by personal delivery, to the publisher, present of this book.

**Centre Publishing Company, Suite 643, 110 W. 34th Street (at Broadway), New York**

NOTE: Dr. Sears lectures every Sunday at 11.15 A. M. in the Criterion Theatre, Broadway at 44th St. N. Y. City

Hence the generator will have less chance to keep the battery charged. And since the added darkness of winter forces you to burn your lamps longer each day, your battery really needs more charging than it does in spring and summer. If you don't have much chance to run faster than from ten to fifteen miles an hour most of the time, help to generate current for your battery by running the motor quite fast for short intervals while the car itself is not running. Be careful, however, not to let the motor race.

If you do not care to take this means of storing up energy, take the car to a battery service station and have the charging done there. Still another expedient is to buy a home charging outfit, which enables you to charge the battery by using current from the electric light circuit. It is an inexpensive device.

One of the reasons why it is important to watch your battery carefully in cold weather is that the chemical processes act more slowly at low temperatures than in summer heat. It is necessary to keep the distilled water in each cell at the proper level and you should not only own a hydrometer but use it freely to test the specific gravity of the electrolyte.

When the motor is cold, it is hard to start for two reasons: First, the mixture does not readily vaporize. Second, the oil between the pistons and the cylinder walls is congealed with the result that the pistons are more or less stuck and require abnormal effort on the part of the starting motor—and therefore the battery as well—in order to break them loose.

When you step on the starter button and spin the engine to no avail, stop spinning it when you find that the motor does not respond within a reasonable space of time. If your motor does not start the first time, get out and prime it, or wrap hot cloths around the carburetor. Spinning it the first time has broken the stuck cylinders loose. Warming the carburetor will make the mixture vaporize easily, and after that you should have no trouble.

Keeping the engine warm overnight prevents the oil from congealing, relieves the starting motor and the battery of much unnecessary strain and keeps the carburetor from getting so cold that the mixture condenses in the manifold, instead of vaporizing.

It is advisable with most motors to use a lighter oil in winter than in summer. The instruction book that came with your car probably advises you in detail on this point.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product.—Address Motor Editor, The Independent, 119 West 40th Street, N. Y. C.

## MR. PURINTON'S EFFICIENCY QUESTION BOX

350. A Western Reader. "I have a college degree, but am living on a lonely quarter-section of land in the West. I like farming and also carpenter work. My people want me to leave here and go into some work where I can 'use my education.' (a) Should I enter the building field, buy lots and build on them with my own money, starting with \$800 to \$1000 capital? (b) I am thirty years old and unmarried; have not much self-confidence in matters of courtship; how can I meet young women, and how learn to act toward them?"

(a) Learn the fundamentals of the real estate business before starting to buy and build on your own money. Better also get a job, or form a partnership, with an experienced builder of suburban homes in a large city near you; then gradually branch out for yourself, on a basis of real knowledge. Put your money in the bank, don't risk it on a mere experimental vocation. Succeed first.

(b) What do you care about courtship until you meet the girl you love? Then, if she is a real woman, your lack of self-confidence will appeal to her—if you are manly in other ways. Join a church nearby, or attend several churches. Find, or else organize, a social center in coöperation with your district school. Prepare for marriage by learning how to treat a wife—books will be suggested if desired.

351. Mr. P. K., New York. "I am eighteen, studying at a rabbinical college. Do not want to become a rabbi, desire to study medicine, ought to make my living while doing this. (a) Should I leave college and start in medicine? (b) I like journalism, too, after medicine; should I rather take this up? (c) How can I be more efficient in memory and concentration? (d) Should a student read newspapers? (e) Is a club a useful thing for a student? I thank you, and congratulate you on the good work you are doing for society."

(a) Consult your parents; also an expert character analyst (names frequently mentioned here). One of the best ways to earn your living while studying to be a doctor is to get a position of some kind at a good health resort or sanitarium, and obtain actual experience while memorizing theory.

(b) Go to the New York Public Library, find standard books on medicine, also on journalism, and see which kind interests you most. Have a talk with a doctor, then with a reporter or an editor, and compare results. Choose one calling, and stick. Don't study one while hankering after another.

(c) Ask Efficiency Publishing Company, Woolworth Building, New York, for a list of books and schools.

(d) One good paper—about fifteen minutes a day.

(e) Social? No. Professional? Yes. Athletic? Sometimes. In general, postpone club life till you are grown—a college student isn't.

352. Mr. J. C., Alabama. "We want to make our school as efficient as possible. Our courses run from kindergarten to high school. I write to suggest that the schools seem to be the best field for your work. Would be glad to know of any publications on the subject of school efficiency."

The branches of school efficiency are so many that even a partial list of books and helps would fill a page of *The Independent*. Write your State Superintendent of Schools, also the U. S. Commissioner of Education at Washington, for a list of school journals in the country; obtain sample copies, take several, watch articles and advertisements for educational work. Among these are *Education*, *The Journal of Education*, *The Rural Educator*, *Normal Instructor-Primary Plans*.

You can buy for cash or on easy payment plan will be arranged for you. No pay all charges. Write today about this sensational offer.

METRO TYPEWRITER COMPANY  
70 Front Street Brooklyn, N. Y.

AT this time of the year the President of the United States sets forth in a proclamation the reason why we should offer up thanks for the bounties and blessings of the past year. The fates have been kind to us and we have escaped the scourge of war and the sufferings which follow.

While you are celebrating Thanksgiving do not forget that in many a foreign home there is an empty chair at the head of the table and hungry women and children who are not as fortunate as ourselves.

You can add much to your own happiness by helping these unfortunates who are suffering through no fault of their own. This Committee will help you by forwarding in full, without any deduction, any contribution (no matter how small) you feel like sending and further assure you that every penny will go toward the relief of the widows and orphans of Germany, and will be distributed under the supervision of our Ambassador to Germany, the Hon. James W. Gerard.

Checks should be made to the order of JOHN D. CRIMMINS, Treasurer, 21 Park Row, New York or CHARLES G. DAWES, 220 South State Street, Chicago

Educational Service Corporation, 230 Fifth avenue, New York; Educational Equipment Company, 70 Fifth avenue, New York. Study book lists of New York publishers specializing in educational work; such as American Book Company, Ginn and Company, Rand-McNally, Putnam, Baker and Taylor, Macmillan, Barnes, Cambridge Press.

353. Mrs. M. H. B., Kentucky. "Some of us housewives have got so far on our difficult path as to avoid drugstores by means of right foods, baths, exercise and large laundry bills; but we are fearful lest we fail in the moral training of the child. What do you think of the approval system? Shall we scold our children when they do wrong—or rather praise them when they do right? Is not approval the only key to successful relationship with children and husband, also with tradespeople and household keepers?"

They do. One of the most common, and most criminal, traits in American family life is a lack of decent praise for the kind things done every day without hope of reward or even recognition. More children starve for praise than for bread. Juvenile court officials claim that 70 per cent of the sins and follies of "wayward" youths may be traced to bad treatment in the home—nagging, scolding, forbidding, denying, and punishing. Children need hardships, griefs, privations, obstacles, too. The new spineless mode of child-training is as void of character as a jellyfish. Every child must learn to do right for right's own sake, not for a piece of tabby, material or mental. A smile is good, a backbone is better, the combination is best.

354. Mrs. J. B. T., West Virginia. "The hardest day in the week, to many housewives forced to do their own work, is the family wash-day. Even those who hire the washing done seldom find a woman properly trained to do it. Why should we wash clothes as our grandmother did, when we have progressed as much in other lines of household efficiency? Can you suggest how to make wash-day less burdensome, and results more scientific and economical?"

A leading feature of approved domestic science books and courses is the treatment of the modern laundry. Ask for particulars of American School of Home Economics, 529 West Sixty-ninth street, Chicago. Write Colgate & Co., New York, for their booklet "The Right Way to Wash Clothes." Investigate possibilities of an electric washer—details from Western Electric Company, 463 West street, New York. Are you a member of the Housewives' League, or the Housekeepers' National Alliance? If so, apply to headquarters for solution of your household problems.

355. Prof. A. D. L., Massachusetts. "I understand that you recommend the no-breakfast plan for brain-workers. I have tried it, and it does not work. When I omit breakfast—formerly meat or cereal, fruit, and coffee, I am troubled with morning headache, bad stomach, tendency to confusion of mind. Then at noon, when I have but forty minutes in which to eat and return to my desk, I am so hungry I overeat, and feel wretched in the afternoon. Still, I am convinced that the two-meal plan is right in theory, and was never in really good health on three meals. What should I do?"

Don't blame us if you experiment unwisely. A change in meal-habits should be authorized by an expert. The average man, being slave to his stomach, should not make free with it—he cannot run it all by himself.

Probably your morning headache is nervous reaction from years of coffee-stimulation; or just "habit-hunger," likely soon to vanish. Don't be a quitter. But your noon recess is too short for a good meal; try a very small breakfast—say an egg on toast, or a dish of flaked cereal, with fresh or stewed fruit, then at noon a sandwich and glass of milk, or dish of custard, with fifteen minutes of perfect relaxation following. But consult your doctor first.

356. Mr. M. H. W. "Will you kindly inform me where a person wishing to become an efficiency expert can get the necessary training?"

Nowhere, we are sorry to say. Efficiency work is so new that a complete course of training for experts has not yet been devised. You can learn vocational or industrial efficiency by obtaining a position with leading efficiency engineers—such as the Harrington Emerson Company or the Business Bureau; personal efficiency, however, must be learned from a variety of sources.

Join the Efficiency Society, the National Institute of Efficiency, the National Association of Corporation Schools, other similar organiza-

tions. Read a dozen of the best books, and take three or four modern mail courses on the subject—procure list from Efficiency Publishing Company, Woolworth Building, New York. Study professional magazines and trade journals, keep files and clippings on your chosen branch of the science. Make your life and work supremely efficient, where you are; so be ready for opportunity when it comes.

357. Questions from Kansas. "Can you give me the names of schools that would prepare for City Manager position? Am a junior in college, have specialized in sociology and economics, would like to take a course that would fit me for a position where I could learn the details of city administration by actual experience, and be in line for a higher place."

Regular schools and colleges do not include the training you need, as the position of City Manager is of recent evolution and not yet standardized. You will find much valuable information, with references to books and magazine articles, in *The Independent* for April 3, 1916, under *Debate on City Manager Plan*, page 40. Requirements of the position you want are mentioned in the literature cited.

We would suggest that you prepare, and apply, for a subordinate position under a City Manager in a place where the scheme has proved successful; and thus learn while you earn. Take a course by mail in bookkeeping, stenography, accountancy, or some other essential office branch, then climb on this foundation.

358. Retired Professional Man. "My problem is to construct a *modus vivendi*, at sixty years of age, for the rest of my life. Have plenty of means; children all grown and educated; people seem interested in me only to get something out of me; health rather poor—nervous, in bad shape; am lonesome for real companionship, as my wife recently died. Interested in education, science, philosophy, law, medicine; always thinking how things could be made better around me. How shall I attain more health, happiness, usefulness?"

We can hardly suggest a plan of life without a personal consultation. But we know men of your age, and older, whose largest usefulness began at sixty. Some of the world's finest books were written, benefits conceived, empires built, inventions made, memorials dreamed, by men past seventy.

Read Sanford Bennett's book on "Prevention and Cure of Old Age." Find what your local health and school officers are doing in social service—offer to aid them. Coöperate with your board of associated charities. Consult pastors of various churches for pointers on cases of need. Take a higher membership in the National Institute of Efficiency (particulars from *The Independent*), and enlist others in the work. Join various national civic associations, put their teachings into effect in your community. Ask yourself what your wife would have you do, if she were living; do it, and be happy.

359. Mr. W. J. P., Iowa. "I am twenty-six, married, have one small daughter. We live on a farm of 120 acres, lease runs four years, basis one-half share of proceeds, average profit to us \$550 a year. I am called a successful farmer, but like machinery better, and can do almost anything with tools. Have made a gasoline farm tractor, a canvas canoe, an electric lighting outfit, etc. The rhythm of a smoothly running machine thrills me all over, a modern locomotive is finer music than any piano or violin. (a) Should I leave a successful farm to enter the work I was born to do? (b) Would Haddock's 'Culture of Courage' help me decide? (c) How about Dickson's *Course in Memory Training*? (d) Would Dr. Blackford's *Course in Character Analysis* be worth to me the difference in price between that and her book—some \$25?"

(a) Start your real work—but don't leave the farm. A man who can clear \$550 a year on a rented farm has no business trying experiments in a foreign field. You could learn gradually to be an electrical engineer, a teacher, sales man or demonstrator of farm machinery, a farm efficiency expert, a commercial photographer, or somebody else even more desirable. Get a copy of *Popular Mechanics*, 6 North Michigan avenue, Chicago; study all the advertisements, find the good openings, choose the best. But hold on to the farm for the present.

(b) Not very much. (c) In your case we regard the *American Course* of higher value, to systematize your work and give you more time for new activities. (d) No.

## Christmas, 1916.

Your friends can buy anything you can give them—except your photograph.

*There's a photographer in your town.*

# MARKET PLACE TALKS

BY LUIGI CRISCUOLO

## WEEDING OUT INVESTMENTS

**A**N intelligent weeding-out process is just as necessary in the field of investment as it is in farming or business. Investment securities that were considered high grade twenty years ago are now worth but a fraction of their previous value while others that are now worth many times par value were selling for a song a decade ago. As conditions change in industry and finance, securities of all kinds are affected.

The problem of the investor is how to keep in touch with changing conditions so as to prevent material losses which occur in securities originally believed to be sound. Ten years ago a divisional bond of a prosperous railroad system sold at above par; this bond sold this year as low as 40 and has only recently recovered to about 50 due to a favorably regarded reorganization of the company. There are numerous cases that illustrate this exact point.

The investor may ask why bonds that once sold at so high a price declined to such an extent or why they ever sold at high prices. The reason is that a railroad division that was once profitable may lose its source of income, or its traffic may be diverted in order to effect economies for the whole property. When the system becomes weakened either thru poor management, restrictive legislation or bad general conditions, a hand-to-mouth financial policy prevails and money is borrowed for short terms at high rates.

When earnings do not improve and the company's credit continues to decline, a receivership ensues and the organization is found to be so demoralized that only a drastic readjustment can save it. It is then that the divisions with poor earnings are either eliminated or holders of its securities are given stocks for their bonds; this is evident in many of the recent railroad reorganizations. That is why we see such drastic scaling down of securities, that is why one railroad reduces its bonded debt from \$87,000,000 to about \$36,000,000, or by 58 per cent.

This disease is not prevalent among railroads alone for many industrial concerns have had to undergo the same sort of treatment. Public service corporations in large cities have suffered from the same disease; the New York tractions had an epidemic a decade or so ago and trouble seems to be brewing in Chicago, St. Louis and San Francisco. The cause is not always the same but in most cases we find: uncordial public relations, poor service, a too liberal dividend policy, exploitation by means of holding companies, over-capitalization, increasing cost of taxes,

labor and material, extension of mileage while the fare remains stationary, etc.

These are all factors that affect securities and factors that the intelligent investor must be on the lookout for if he does not wish to suffer a loss. For such reasons as those cited, investors should look over their holdings regularly twice a year, with the assistance of a reputable investment banker, for the purpose of weeding out undesirable or unprofitable holdings. Furthermore, those in which there is a large profit should be sold if an impending decline is at all evident or likely.

**S**OME concrete cases of what a process of elimination consists of may assist the reader. A business man who is not dependent upon his investments has been buying only very conservative securities in a high market when their yield is but 4.25 per cent or thereabouts. He finds that, while he has the best sort of holdings, his income is only a little over what the savings bank would pay. He is burdened with the care of securities, clipping and cashing of coupons and perhaps taxed locally so that his net income is reduced to 2½ per cent. It would be wise for an investor of this type to sell some of his securities at top prices and purchase another grade of bonds, well secured but affording a yield of 5 per cent due to the fact, perhaps, that they were not legal for savings banks. There could also be included a few high grade public utility and industrial issues yielding above 5 per cent.

Then we have the investment fund in which there predominate such issues as low-priced railroad shares which do not pay dividends. These may have been bought on the assumption that due to earnings of say 2 per cent, they were entitled to sell at better than 10 or 20. The stocks are held for months or years while the market fluctuates up or down 5 points, and are not sold because the small profit does not tempt. In the meantime the interest piles up to a considerable amount. If such stocks do not move very fast there is no object in sensible people holding them unless they are sure of their ground and have other investments to fall back on in case of loss.

There may be found in the holdings of a New York investor many bonds which are tax free in Pennsylvania, for instance, and which for that reason may sell a few points higher than the same class of bond of another company that was not tax free in that state. It is obviously unprofitable for a Pennsylvania tax free bond to be held by a New Yorker under such conditions and

it should be exchanged at a favorable time.

It may happen too that a woman may hold short term issues that require re-investment every few years as they mature. This affords room for temptation on the part of unscrupulous brokers with get-rich-quick schemes or stocks of doubtful value. High grade short term issues yield very little just now and are more suitable for business men or institutions than for women. They might be disposed of to advantage at high prices and the funds re-invested in first mortgage long term issues.

Among the changing conditions that affect public utility bonds are renewals of franchises. As soon as a company begins to have difficulties about the renewal of franchises the safety of its bonds is threatened and if the bonds are not absolute first mortgages a sale is often advisable. In the case of stocks the need for a change is all the more apparent. In buying public utility bonds it is always advisable to be sure that the company's franchises extend for about five years after the maturity of the bonds. Public utility bonds are about the least affected of any class by depressions, particularly if the company serves one or more communities with transportation, light, power, water, etc. Bonds of companies furnishing more than one utility are preferable as are bonds of companies serving several communities.

We must admit that it is not an easy matter for an investor to keep his holdings in absolutely flawless condition. However, in these days of specialized investment banking with highly paid experts in charge of statistical departments, it is a comparatively simple matter for an investor to ask his banker, or any banking house at all if he has no regular banker, for advice regarding his investments. This advice is furnished gratuitously and any conclusion is the result of careful study that will assist investors.

*The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.*

## Foundation Stones of Safety

These are the absolute fundamentals of safety in investment bonds, as universal experience has demonstrated:

The *sponsorship* of an experienced, able, responsible investment house, of proven integrity, ample capital, and independent judgment, which has first invested its own funds in the bonds before offering them to the public.

Sufficient *margin of safety*,—the equity protecting the bonds being ample for all possible contingencies.

Thorough *responsibility* on the part of the borrower, corporation or individual.

Adequate *earning power* on the part of the property mortgaged, to insure prompt payment of interest and regular reduction of the principal.

A *strongly drawn* trust deed or mortgage, making every provision to safeguard the bondholders.

Regular *reduction* of the principal sum through serial payments, so that the bonds are steadily retired and the margin of safety steadily increased.

First Mortgage Serial Real Estate Bonds, issued and safeguarded under the *Straus Plan*, are fundamentally safe by each and every one of the above tests, and yield the attractive interest rate of  $5\frac{1}{2}\%$ .

We have prepared special literature, of value to every prudent investor, describing the *Straus Plan* and the thoroughly safeguarded bonds issued thereunder.

## ACCELERATIVE ENDOWMENTS

For the purpose of making a blanket reply to inquiries which, tho few in number, are constantly reaching me from readers, I wish to explain that the plan of life insurance known as the "Accelerative Endowment" consists in the inclusion of a provision in a Life or Endowment policy thru which, if the annual dividends are left with the company, they will be used to shorten the term of the endowment. An Ordinary Life policy is an endowment at age 96. By leaving the annual dividends to be accumulated at compound interest, it is possible to make the cash surrender value equal the face of the policy in from 25 to 35 years, the initial age of the policy-holder governing the time necessary to effect the result. In the same way the term of a 15 or 20 year Endowment may be shortened. To illustrate an Ordinary Life policy carrying the accelerative endowment provision, I have in mind the case of an insured aged 30, in a certain company, whose policy was matured as an endowment at age 62, when he surrendered it and received in cash \$1,038. The reserve under the original policy was \$455, and the dividends at compound interest amounted to \$583 more. The advantages of that plan to those who can afford to leave their dividends with the company are obvious.

## COMPETITIVE LITERATURE

There recently came to my attention an article in a company publication on the subject of competition in the life insurance business. It merely served to remind me of a custom which has grown up during the past ten or twelve years, one with which I do not agree. I refer to the strict embargo which all of the best companies have placed on the use by agents of what is called competitive literature. I am in thoro accord with the motives which actuate them in their efforts to remedy a former abuse; but I sincerely believe that in attempting to abolish competitive literature they have merely gone from one extreme to another.

Commencing about twenty-five years ago and running down to 1905, when the New York legislative investigation of life insurance brought life insurance activities almost to a dead stop, competition was fierce and often unscrupulous. Libelous and defamatory literature was as abundant as that which was devoted to needed legitimate criticism. Policies, plans, managements, financial results were recklessly and shamelessly misrepresented.

# Stocks and Bonds ON THE PARTIAL PAYMENT PLAN

Write today for Booklet C. 2, "The Partial Payment Plan," which explains thoroughly our method by which you may purchase Stocks and Bonds in any amount—from one share or bond up, by making a small first payment and the balance in convenient monthly instalments. You may sell your securities at any time to take advantage of rise in market.

Free Booklet, C. 2, "The Partial Payment Plan." Gives full information of this method, which appeals to thrifty men and women in all parts of the country.

## DIVIDEND

### MERGENTHALER LINOTYPE CO.

New York, Nov. 14, 1916.

A regular quarterly dividend of 2½ per cent. and an extra dividend of 2½ per cent. on the capital stock of Mergenthaler Linotype Company will be paid on December 30, 1916, to the stockholders of record as they appear at the close of business on December 2, 1916. The Transfer Books will not be closed.

FRED K. J. WARBURTON, Treasurer.

## THAT PLEASURE CAR

Have you selected yours for 1917? Have you gathered sufficient information to be sure which make and model best suit your needs and tastes? In order that your selection may be permanently satisfactory, perhaps you would like some expert advice. Ask our Motor Editor what you wish to know. He will serve you gladly and without charge.

## THAT MOTOR TRUCK

Have you worked out your plan for adding it to your business equipment? Have you figured out the cost of such a service? Have you clearly in mind the saving that will result?

## THOSE ACCESSORIES

Do you want to know more about them, and in detail? Do you desire information regarding the equipment of your car? Would you like to learn some new things about the parts that go to make up the car that fully satisfies?

Put your problem up to The Independent Motor Service. Tell us your motor needs and what you wish to spend. Tell us what makes interest you most. We will give your problem careful and prompt attention.

THE INDEPENDENT-HARPER'S WEEKLY  
MOTOR SERVICE

119 West 40th Street New York

Great injury resulted. The whole institution of life insurance suffered damage; the confidence of the public in it was undermined.

But because man possesses the ability and the inclination to abuse the privilege of criticism is not a reason for abolishing it entirely. Because a certain number of unscrupulous persons prospered in the trade of lying is no warrant for prohibiting the circulation of the truth. Life insurance management has not yet reached a state of perfection, nor are the persons in control of some companies as upright as they should be. There are numerous irregularities remaining to be extirpated. The best interests of policy-holders demand that the exercise of honest, fair, constructive criticism continue uninterrupted; and it is the duty of companies which are striving in every way they can to serve the people—and they are many—to help this cause of honest criticism to the limit of their means.

#### EXPERIENCE

Thoroly discredited in the north-eastern portion of the United States, the system of deferred dividend life insurance is vigorously promoted by a number of local old line companies in the West and South. As long as any considerable fraction of the insuring public remain subject to its deceptions—and hundreds of thousands annually seem to become its victims—the subject is a live one. It is gratifying to note the interest in it shown lately by some of the readers of this department, and for the benefit of all who want real life insurance at its minimum cost it is a pleasure to recount the experiences of those who have tried tontine and learned for themselves what it is. A reader in Massachusetts writes:

"Twenty years ago, at age 38, I took out a deferred dividend policy, annual premium \$37.70 per thousand. 'Former policy results' were represented as \$521 per thousand (cents omitted in all cases). About eight years ago an agent of the company told me that the deferred dividends were running about a third smaller than when my policy was written. Three years ago the dividends were said to be \$291 per thousand. I was assured then that dividends would be larger rather than smaller when my policy matured. It matured a few weeks ago and I received \$254 per thousand, 86 per cent. of what the dividend was three years ago, about 72 per cent of what it was eight years ago, and less than 50 per cent of the bait that was dangled before my eyes when I took out the policy."

R. W. S., Rapid City, S. D.—The annual report of the Dakota Life Insurance Company for the year ending December 31, 1915, indicates a sound financial condition: assets, \$1,694,249; total liabilities, including \$299,999 of capital stock, \$934,249; net surplus, \$1,694,249. It wrote \$1,654,500 new business in 1915 and ended the year with \$9,699,500 in force. Investments are of good character and yield a fair return. Expenses are reasonable; mortality rate low; cost of new business, high. Company has been doing business only nine years.

## TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

# BOTH SIDES

## NATIONAL PROHIBITION

# A DEBATE

RESOLVED, That the manufacture, importation and sale of intoxicating liquors for beverage purposes should be forbidden by an amendment to the Constitution of the United States.

WE have now twenty-three prohibition states, and three more, Florida, Utah, and New Mexico, have elected legislatures pledged to adopt prohibition in the next session. Alaska voted in favor of prohibition this fall. This debate was prepared by Mary Prescott Parsons.

### BRIEF FOR THE AFFIRMATIVE

I. Abuse of alcohol constitutes a serious menace to national prosperity.

A. It shortens life, produces ill health, insanity, bad heredity.

B. It lowers standards of living and causes poverty, suffering and divorce.

C. It lessens efficiency and increases industrial accidents.

D. It corrupts politics.

E. It increases crime.

F. It causes moral degredation.

II. A prohibition amendment is the best solution of the problem.

A. Other remedies are impractical.

1. Local option cannot be enforced.

2. High license has not prevented immoderate drinking.

3. Government dispensaries failed.

4. Licensing individuals will not work.

(a) It is inquisitorial. (b) Liquor dealers cannot be trusted to enforce the law.

5. The Gothenburg system is only a temporary expedient. (a) It does not remove the drink evil.

6. Education, self-restraint and substitutes for the saloon cannot remedy conditions in this generation.

B. National prohibition is practical.

1. The liquor problem should be dealt with by the central government. (a) Prohibition is needed to promote the general welfare. (b) The Federal Government has already begun to control the liquor industry. (1) By taxation. (2) By the Webb-Kenyon law. (c) Only national prohibition can be enforced. (1) State prohibition has failed even since the passage of the Webb-Kenyon law. (2) In Russia national prohibition has been enforced.

2. The argument that national prohibition would be unjust confiscation is not valid. (a) By taxing the liquor industry, the Government does not, in any way, guarantee its permanence. (b) The liquor industry would lose no more thru prohibition than other industries have lost thru tariff laws.

3. National prohibition would improve political conditions.

4. The social benefits of national prohibition would be great. (a) It would reduce drinking to a minimum. (1) In most cases accessibility rather than craving leads to drinking. (2) Illicit trade could not be large at first and would decrease. (b) Home conditions would be improved. (c) The fact that prohibition lessens sickness has been shown in Russia. (d) Prohibition states have a low per cent of illiteracy, insanity and crime.

5. Economically, national prohibition would be an advantage. (a) Much of the money now spent for liquor would be saved or spent to better living conditions. (b) Increased efficiency would lead to higher wages. (c) The same amount of capital, invested in other industries, would furnish markets for more products and work for more persons. (d) The saving thru diminished poverty, insanity and crime would more than counterbalance the loss of revenue.

### BRIEF FOR THE NEGATIVE

I. National prohibition is fundamentally wrong.

A. It is contrary to the principles of our Government.

1. It abridges personal liberty.

2. It is unjust confiscation of property.

3. It violates states rights.

4. It would furnish a dangerous precedent for changing the Constitution to suit passing fads.

5. The amendment could be adopted contrary to the wishes of a majority of citizens.

6. Once adopted, the amendment would be almost impossible to repeal.

B. It would endanger the economic welfare of the country.

1. It would cause industrial depression. (a) The capital invested in the liquor industry would be rendered useless. (b) Many persons would be thrown out of work. (c) The oversupply of laborers would reduce wages.

2. It would necessitate the reorganization of our system of taxation at a critical time. (a) It would diminish the Federal revenues.

C. It would not make the country temperate.

1. Craving for intoxicants cannot be abolished by law.

2. National prohibition could not be enforced. (a) Illicit production and distribution of liquor is easy. (b) The United States Government has found it impossible to prevent moonshining. (c) The states have been unable to enforce prohibition. (d) The conflict of national and local police power would increase the difficulty of enforcement. (e) Public opinion will not support prohibition.

D. Its social effects extremely harmful.

1. It would lead to disrespect for law.

2. Ill health, crime and other social ills would increase. (a) More drugs would be used. (b) There would be an unregulated and illicit trade in the most impure and harmful forms of alcohol.

II. National prohibition is unnecessary.

A. Evils due to use of alcohol probably overestimated.

1. Most people do not consider moderate drinking morally wrong.

2. Many physicians do not believe alcohol harmful in moderate quantities.

3. It is impossible, with our complex relationships, to tell what part alcohol plays in poverty, crime and other ills.

B. A modified Gothenburg system would meet our needs.

1. Private profits eliminated.

2. Political influence of the liquor interests would cease.

3. Consumption of liquor reduced.

4. Only orderly saloons maintained.

5. Higher taxes on a high per cent of alcohol would discourage consumption of the most harmful liquors.

C. Temperance sentiment is slowly but surely growing in the United States.

1. Thru education of children.

2. Thru interest in efficiency.

3. Thru interest in substitutes for the saloon.

III. Prohibition in Russia is no criterion for the United States.

A. Russia's problem was simpler since vodka was a government monopoly.

B. The experiment has not been tested under normal conditions.

## UNFINISHED BUSINESS

**T**HE President's address to Congress at the opening of the short session on Tuesday was merely a statement of the unfinished business which lies before the national legislature. Mr. Wilson recommended nothing new. He was wise to do so. For three months is all too short a time for Congress to deal with the necessary appropriation bills and the inevitable routine business and to finish the work left incomplete when the long session closed. There is also the question of propriety to be taken into account. Owing to our foolish and antiquated methods of procedure, every Congress has one of its sessions after its successor has been elected. The Sixty-fifth Congress was selected last month. It will meet one year from now. Meanwhile the Sixty-fourth Congress goes on legislating, whether its membership really represents the national will or not. It is desirable, therefore, that new and controversial matters should not be considered by the moribund body.

The President, as was natural, devoted his main attention to the unfinished aspects of the railroad problem. He recited his recommendation to Congress in the closing hours of the last session, and reiterated, with one exception, those which have not been already enacted. His recommendations then were six in number: First, the enlargement and reorganization of the Interstate Commerce Commission; second, the establishment of an eight-hour day for railroad employees actually operating trains; third, the appointment of a commission to observe the results in practise of the eight-hour day; fourth, explicit approval by the Congress of the consideration by the Interstate Commerce Commission of an increase of freight rates to meet the additional cost of the eight-hour day; fifth, an amendment to the existing law providing for federal mediation, conciliation and arbitration of labor disputes by the addition of a provision that a full public investigation of every such dispute shall be completed before a strike or lock-out may lawfully be attempted; and, sixth, the empowering of the Executive, in case of military necessity, to take control of such railroads as may be necessary for military purposes and operate them.

The second and third of these proposals Congress enacted into law at the last session, under the pressure of the threat of a general railroad strike. The fourth recommendation the President now withdraws, on the ground that it might cast a doubt upon the commission's authority or its inclination to do justice. The other suggestions the President very earnestly renews.

From the first of Mr. Wilson's proposals there should be no dissent. The Interstate Commerce Commission should be large enough and flexible enough to do its work efficiently and promptly. Nor should the last of his suggestions meet with any disapproval. If national safety should ever require military activity on the part of the armed forces of the United States, the Government should not be dependent upon private enterprizes for the transportation of the troops and materials of war.

The withdrawal by the President of his former recommendation that Congress urge the Interstate Commerce Commission to consider the question of increased freight rates is an act of belated wisdom. But it leaves Mr. Wilson in an unfortunate position. When he advised Congress to decree the eight-hour day forthwith, he assured the railroads that "no obstacle of law would be suffered to stand in the way of their increasing their revenues to meet the expenses" involved in the new working day. He seemed clearly then to be assuring the railroads, for the purpose of securing their acquiescence in the eight-hour legislation, that he and Congress would do something to help the railroads meet the situation. Now he says that there is nothing they can do. He is doubtless right in his present statement; the Interstate Commerce Commission is not and ought not to be subject to presidential or congressional dictation in the performance of its appointed functions. But the President should have known that three months ago as well as now. He ought not, even in the heat of haste, to have held out an unfounded hope to the railroads.

The backbone of Mr. Wilson's present recommendations, however, lies in his proposal for governmental investigation of labor controversies on railroads coupled with compulsory abstention from strike or lockout pending the investigation. This is likely to be a hotly controverted proposal. Labor is wont to be impatient of any restraint upon its right to strike when and as it pleases. In this country, at least, the leaders of labor thought and action are inclined to interpret any legislation making a strike illegal pending investigation as an invasion of the right of the individual to work or not as his own desire dictates. But in so doing they lose sight of the fact that when the individual acts not as an individual but as the member of an organized group, he of necessity loses some of his individual characteristics, and even some of his individual rights and privileges. The individual, whether he be capitalist or workingman, cannot have it both ways.

Mr. Wilson has set forth this aspect of the cause clearly and convincingly:

I would hesitate to recommend, and I dare say the Congress would hesitate to act upon the suggestion should I make it, that any man in any occupation should be obliged by law to continue in an employment which he desired to leave. To pass a law which forbade or prevented the individual workman to leave his work before receiving the approval of society in doing so would be to adopt a new principle into our jurisprudence which I take it for granted we are not prepared to introduce. But the proposal that the operation of the railways of the country shall not be stopped or interrupted by the concerted action of organized bodies of men until a public investigation shall have been instituted which shall make the whole question at issue plain for the judgment of the opinion of the nation is not to propose any such principle. It is based upon the very different principle that the concerted action of powerful bodies of men shall not be permitted to stop the industrial processes of the nation, at any rate before the nation shall have had an opportunity to acquaint itself with the merits of the case as between employee and employer, time to form its opinion upon an impartial statement of the merits, and opportunity to consider all practicable means of conciliation or arbitration. I can see nothing in that proposition but the justifiable safeguarding by society of the necessary processes of its very life. There is nothing arbitrary or unjust in it unless it be arbitrarily and unjustly done. It can and should be done with a full and scrupulous regard for the interests and liberties of all concerned as well as for permanent interest of society itself.

Congress should take this recommendation of the President seriously. The circumstances of the overnight passage of the eight-hour law make this problem of labor disputes on railroads one of superlative importance. The uninterrupted operation of the railroads of the country is a vital matter for the whole people. No body of persons can be permitted to stop their operation at their own pleasure. There are two ways to prevent. One the President and Congress took three months ago: to grant their demands without investigation or delay. It is manifestly the wrong way. The other method the President now proposes to Congress: full public investigation under government authority, with uninterrupted operation until the inquiry is complete. It is the best way in sight. The most important task the present Congress has before it in its last days is the enactment of this plan into law.

### OPEN THE DISCUSSION

**A**BOUT eight months ago a group of 100 representative Americans scattered thruout the United States formed themselves into "The American Neutral Conference Committee." The best statement of the purposes of this committee is to be found in the petition it is circulating thruout the land. It bears the caption "To Our Government" and reads as follows:

We, the undersigned citizens of the United States of America, declare our conviction that adequate guarantees against future wars—the avowed aim of both belligerents—can be secured by

1. Repudiation of military conquest as a means of territorial expansion.

2. Recognition of the right of each people to determine its own social, political, and economic development.

3. World organization for the development of international coöperation and the settlement of international disputes.

We believe that various public statements by leading spokesmen of the opposing belligerents indicate that discussion based on these principles may be substituted for armed conflict.

We recognize, however, that the nature of the conflict makes difficult the initiation of direct negotiations by the belligerents themselves.

We, therefore, earnestly urge our Government, acting alone or in coöperation with other neutral powers:

1. To invite the belligerents to state the basis upon which they would be willing to begin peace negotiations.
2. To mediate by constructive peace proposals which shall safeguard the just claims of the belligerents and the common interests of all nations.

We submit that this is a thoroly opportune and statesmanlike proposal. It is in no sense a stop-the-war movement because war is "naughty." It urges our Government, either alone or in conjunction with other nations, to invite the belligerents to state what they are fighting for, or else to let us make suggestions to them, or both. These requests are perfectly reasonable and in strict accord with the neutral rights and duties under international law. If either are accepted by the belligerents the way is opened for further discussion or mediation. If both are declined the situation will be no worse than it is now. In other words, there is everything to gain and nothing to lose by making these suggestions now.

Neither The Independent, nor anybody else that we know of, wants a premature or inconclusive peace. The war must not stop until Belgium and western France are liberated, and Germany gives guarantees that she will not go to war again for the lust of world domination. She must either voluntarily withdraw into her borders and submit to the constitution of a League to Enforce Peace or else the war must go on until she is compelled to do so by military necessity.

We are not going to have peace tomorrow, next week or next month, but it will come some day. The better way is to begin to prepare for it now. If Germany is ready for a "just and lasting" peace, there is no reason why it should not be discussed now, and every reason why it should be.

### FROM BUCHAREST TO JASSY

**T**HE Teutonic avalanche has dislodged six capitals in its course: Brussels, Paris, Belgrade, Durazzo, Cetinje and Bucharest. The French Government has returned to its accustomed seat. The others are yet in exile. The armies invading Rumania are now within a dozen miles of the fortifications of Bucharest. In August, 1914, they were as near to Paris, yet that city was not captured or even besieged. We are reminded of Paris again in that all of the diplomatic corps have followed the Rumanian Government in its flight except our American representative. It is also worthy of note that the American minister who is willing to stay behind and stand the changes of a siege, and to whom all of the Allied Powers have entrusted the care of their national interests in this crisis, is Mr. Vopicka, whom a few years ago certain American newspapers were making fun of because of his uncourtly ways.

Bucharest is, next to Paris, the largest fortress in the world. The circumference of its outer girdle of forts is forty-eight miles. There are eighteen main forts in this circle placed 4500 yards apart, and eighteen smaller forts between and behind. Each of the main forts has six six-inch guns, two eight-inch howitzers, one 4.7 inch howitzer and six quick-firing guns of small caliber, all sheltered by cupolas. These forts are of the same steel and concrete construction as those of Antwerp, Liège and Namur, in fact, they were designed by the same man, the famous Belgian military engineer, Brailmont. Under his direction little Rumania expended \$20,000,000 between 1882 and 1892 in fortifying the capital. There was thought no stronger fortress than

Bucharest in the world except Antwerp, which Brailmont constructed later. But Antwerp succumbed within a week when once the Germans brought their guns to bear upon it, and there is no apparent reason for expecting Bucharest to hold out longer. A Brailmont cupola was considered impregnable, but that was before the days of big guns and high explosives. A subcutaneous injection of picric acid would be fatal to it. The Bucharest forts are armed with guns "made in Germany." When Krupp meets Krupp then comes the tug of war. But what is an eight-inch gun to do when a sixteen-inch gun stands out of range shooting at it?

There was, then, good reason for the removal of the government from Bucharest to its ancient rival, Jassy. The modern Rumania owes its elbow shape to the fact that it was formed by the union of two countries, Moldavia and Wallachia. Bucharest was the capital of Wallachia and Jassy was the capital of Moldavia. When the two were united in 1861 the national assembly decided to make Bucharest the capital of the new nation and voted that \$700,000 be paid to Jassy in compensation of her lost prestige. But the Rumanian Government has never been very particular about promises and the money has never been paid. The change in capital really means that Wallachia has passed into the control of the enemy, but that there is still hope of saving Moldavia.

Russia has come to the rescue, but four months after she promised to, and four months is a long time to lose when wars are speeded up as they are now. Rumania was wary of entering the war. She held off for two years, with both sides bidding for her support. The Allies were the more generous in their offer of enemy territory, and finally Rumania agreed to join them on condition of getting Transylvania, the Banat and the Bukovina. But she insisted upon one precaution: the Allies should promise that simultaneously with her attack on Hungary the Russians should attack Bulgaria from the north, and the French and British from the south. With this assurance of aid Rumania invaded Hungary the last of August. But December is now well along and neither the northern nor the southern frontier of Bulgaria has yet been reached by the forces of the Allies.

### BRITISH EMBARRASMENTS

THE news that considerable changes are impending in the British Government, perhaps even its replacement by a new administration, does not come out of a clear sky. Altho the discussion of the difficulties has been, for the most part, carried on privately and little specific criticism has been voiced in Parliament or the press, yet it has been evident that the disaffection is widespread and deep-felt, and, as usual in democratic countries, the men in power are blamed, justly or unjustly, for whatever goes wrong. Some of the causes of the feeling of discontent are easy to see, tho who is responsible and how they can be remedied we do not know, nor probably do the British themselves.

In the first place, there is undoubtedly a considerable amount of dissatisfaction, if not discouragement, over the conduct of the war. This does not mean that John Bull has been shaken in his dogged determination to see it thru. If the music hall singer challenges his audience, as he did in 1914, with "Are we downheart-

ed?" he would probably get as hearty a roar of "No!" as he did then, and his second demand, "Will we win?" would still be answered "Yes!" But his audience would not now be quite so confident that the men at the head of affairs were going to do the winning. The removal of Admiral Sir Henry Johnson from the post of First Sea Lord and of Major-General Sir Stanley von Donop as Master General of the Ordinance is sufficient to show that neither the army nor the navy has been handled satisfactorily. But these displacements will not appease the populace, and some of the men higher up will have to step down and out.

When the British people raised a volunteer army of five million men and provided them with everything they asked for in the way of guns and shells, there was a natural expectation that something big was to be done. The gaining of half a dozen miles on the Somme at a cost of half a million men does not satisfy this expectation, no matter how it may be explained. The collapse of Rumania is not only a disappointment but a surprise. The quotations from the British press which we gave last week showed how completely the public that read and believed such reports were deceived as to the power of Germany. The inactivity of Russia in this crisis gave rise to the suspicion that she was thinking of making peace with Germany. The inactivity of the army at Salonica is still more mysterious. When it was landed there it was popularly expected to do more in the course of a year than to capture Monastir and coerce Greece. An army of more than half a million has been gathered from eight countries, yet the news that comes from there tells of a fight with Greek peasants on the Acropolis and a bayonet charge up Mars Hill! No matter how wicked King Constantine may be, yet the overthrow of Greek independence is not a congenial task for the French and English who established it.

The suppression of the Irish rebellion left Ireland more rebellious than ever. Home Rule is at a deadlock. British-Canadians have responded gallantly to the call for volunteers, but French-Canadians seem to be moved neither by loyalty to Great Britain nor consanguinity to France. Australia has sent more troops in proportion to her population than any of the other dominions, but the defeat of conscription revealed a growing alienation in that quarter, due in part to the feeling that the British Government is giving Japan too free a hand in the Pacific. The action of the government in using Asiatic labor in manufacturing and commerce has offended labor sentiment in both Australia and England.

In order to put an end to coal strikes the government has had to take control of the Welsh mines. It is likely also to take over all the shipping and regulate the food supply, for there has obviously been a serious miscalculation or a failure to calculate as to the amount of grain needed for the winter. Altho Mr. Runciman assures Parliament that England has lost only two and a half per cent of her merchant fleet, the large number of vessels withdrawn for Admiralty service has cut down on importations just at a time when the withdrawal of men from the fields has lowered the production of home-grown food. The German submarines have lengthened their radius of action and the German destroyers are raiding the Channel and the English coast.

All this has sent up the price of food alarmingly and compelled the adoption of such regulation of consumption and distribution as the other belligerent countries have enforced.

We must also recognize a growing restlessness among certain classes over the suppression of free speech by official and unofficial coercion. The Englishman is accustomed to say what he pleases, and the censorship annoys him even when he knows it is necessary. It is not a nice thing that a world-famous philosopher like Bertrand Russell should be dropt from the university and prevented from lecturing because he has expressed opinions that under ordinary circumstances would be thought harmless or commendable. The Independent Labor party is irritated that its meetings for discussing peace terms are prohibited or permitted to be broken up.

Such are some of the causes of the discontent prevailing in Great Britain. Conditions are not so bad there as in the other belligerent countries, but the British people are not used to standing such bad conditions. They seem at any rate determined to try a change of administration to see if some things, at least, cannot be bettered.

#### WHY CALL IT THANKSGIVING?

THERE is an old and therefore a good story of a funeral where the clergyman expected to officiate failed to appear at the grave. So the undertaker inquired if some one present would not say a few words. After a decent pause a gentleman stepped forward and said that if no one else wished to occupy the time he should like to make a brief speech on the single tax. This is a true story altho it may never have happened, for it not only gives due credit to the followers of Henry George for their propagandist zeal but calls attention to a common trait of human nature, the propensity to make use of any occasion to bring forward one's chief interest. The preachers are specially fond of telling that single taxer story, yet they are particularly prone to act the same.

Take last Thanksgiving for example. The New York newspapers of the morning after give several columns to abstracts of the sermons delivered from which we gather that the chief themes were: denunciation of sloth, selfishness and greed; discussion of the negro question; advocacy of national prohibition; call to personal repentance; criticism of President, Congress, capitalists, pacifists, labor agitators, etc.; preparing the way for Billy Sunday; protesting against deportation of Belgian workmen; the evils of patriotism; the lack of patriotism; the Mexican imbroglio; the eight-hour law; sympathy for Rumania, Poland, etc.; the right to find fault; exhortations to end the war or to take part in it; the necessity of preparedness; why other nations are laughing at us; have we any right to be thankful; disapproval of the high cost of living; condemning the American people because they are making munitions or because they are not using them; and so forth. Not much of the spirit of thanksgiving in all this. But hold, we are too hasty. One congregation did give thanks—to President Wilson—that the nation had been kept in the paths of peace and justice. We do not wish to belittle the part of the President in keeping the nation in these

paths, but we supposed that when he called upon the country to express its thanks he did not expect them to be telegraphed to Washington but directed toward Heaven.

The Pilgrim Fathers established two days of public prayer, one of feasting and thanksgiving, the other of fasting and humiliation. The second has been tacitly dropt. The first has been ostensibly retained, but has gradually taken on the form of its opposite. All stated occasions for the public manifestation of a particular emotion are liable to such progressive degeneration. The muckraker has secured a monopoly of Independence Day and a foreigner listening to the orations now given on the once Glorious Fourth would suppose that it marked the beginning of the fall of the nation into a state of intolerable corruption and degradation. On Washington's Birthday some historian with a scent for scandal regales us with an exposure of the sins of our forefathers. On Decoration Day we hear that both sides were equally brave and patriotic and that it is our duty to forgive them both.

There has been, in fact, only one genuine Thanksgiving Day. That was held in 1621, when an un hoped-for harvest saved the lives of the Massachusetts colony. All the other Thanksgiving Days have been imitations of this original and spontaneous outpouring of public gratitude and the imitations get poorer and poorer year by year until now it is a question whether the day has a right to the name. If we have lost the power or the right to give God thanks for national blessings let us be honest and say so, not call a season of fault-finding and repentance a "thanksgiving."

#### A WIDENING SPHERE OF INFLUENCE

THE fact that the Rockefeller Foundation has been able to call to its presidency with no increase of salary the president of one of the largest and most promising of the state universities shows what an opportunity such philanthropic institutions offer to those who are ambitious to benefit their fellowmen in the most effective way and on the most extensive scale. Dr. Vincent is a growing man, and thruout his career he has been constantly extending the radius of his activities.

He started in with Chautauqua and for more than twenty-five years he had virtual charge of the courses of instruction of this country-wide school. This did not give him enough to do, so when the University of Chicago was started in 1892 he went to that and steadily ascended the professorial ladder to the deanship of the college. In 1907 he became head of the University of Minnesota, and now that institution has over 9000 students.

As president of the Rockefeller Foundation his influence will not be confined to the limits of state or nation. His field is the world and he has a hundred million dollars to spend on it. He may be at the same time sending food to the starving Poles and books to the schools of China. The name of the Rockefeller Foundation is blessed in Belgium, where more than a million dollars have been spent in carrying on the relief work. With a man of Dr. Vincent's wide sympathies, high ideals and executive ability at the head we may be assured that its funds will be wisely used.

# THE STORY OF THE WEEK

The Land of Corn and Oil The Bucharest despatches say that the Rumanian armies in retreating are setting fire to their villages, granaries and oil wells. The Germans, on the contrary, claim to have captured immense stores of produce that will go far toward relieving the famine in Germany. Rumania ordinarily exports more grain than any other country except the United States and Russia, and since the outlet to the sea has been blocked for the last two years there must be a great quantity remaining in the country and the Rumanians have been driven back so rapidly that it is not probable that they could have destroyed it all.

The grain-growing district is Wallachia, the western part of Rumania, most of which is now in the possession of the invaders. The oil region lies on the mountain sides northwest of Bucharest. The Rumanians have fought hard to hold this, the most valuable part of their land, but while they were confronting the Germans at the mouth of the passes they were taken in the flank by the drive from the west. Before retiring the Rumanians are said to have burned up the works and set fire to the wells. If they have done this it will be a great loss as well as a great disappointment to Germany, for the petroleum industry was mostly owned by German capitalists, altho it is said that the Standard Oil Company still has some \$10,000,000 invested there.

The failure of the Rumanians to hold either the mountain wall that protects their northern frontier or the moat river that protects their southern frontier is a grievous disappointment to the Allies. The Carpathians and the Danube have been from time immemorial regarded as almost impassable barriers, yet the Teutonic armies have crossed them not in one but in a dozen places. Of the ten railroads which, starting on the frontiers, run into Bucharest, the invaders now hold nine and by means of them can bring their troops and guns from all sides directly to the capital.

The Rotenturm or Red Tower Pass, at which the army of Falkenhayn battered long in vain, was finally taken with scarcely the loss of a man because entrance of the Teutons thru Vulcan Pass to the west made it untenable. Swiftly advancing eastward along the southern side of the mountains, the Teutons took Kimpolung and Piteshti, which gave them control of the railroad leading from these points to Bucharest.

On the south Mackensen has met with still less opposition. With his next force of Bulgars, Turks and Germans he has crossed the Danube at half a dozen points between Orsova and Chernavoda by means of boats and

## THE GREAT WAR

November 27—Rumanian Government moves to Jassy. Germans catch British armed trawler near English coast.

November 28—Two Zeppelins brought down in England. Bulgars cross Danube to Giurgevo, southwest of Bucharest.

November 29—Germans take Piteshti, northwest of Bucharest. Sir John Jellicoe made First Sea Lord and Sir David Beatty commander of the grand fleet.

November 30—Teutons take Kimpolung. King Constantine refuses to surrender artillery to Allies.

December 1—Allies and Greeks fighting in Athens. British Government takes over Welsh coal mines.

December 2—Russians penetrating Kirlibaba Pass, Carpathians. Germans take 6000 Rumanians in one day.

December 3—Cabinet crisis in England. Allies hold up Greek shipping.

pontoon bridges. This brought him on the left flank of the Rumanians, who were trying to make a stand against Falkenhayn's forces from the west, so they were obliged to fall back upon Bucharest. The crossing at Giurgevo enabled Mackensen to advance up the railroad directly upon Bucharest from the south, and he got within five miles of the outer circle of forts before he was checked by a rally of the Rumanians reinforced by the Russians.

(American Press)

### AN EMPTY VICTORY IN RUMANIA?

The retreating Rumanians are burning all they can of their accumulated stores of supplies—grain, oil and produce—to prevent the Germans from seizing them. The photograph shows an oil supply station, which the Rumanians set fire to in the first of their retreat.

Bucharest Preparing The capital of Rumania, as we have said on an editorial page of this issue, was provided thirty years ago with a system of fortifications which were then regarded as models of the art of permanent defenses. Their present value seems likely soon to be tested, for the advance guards of the Teutonic forces have come within gunshot of the outer ring of forts and have already enveloped the city from the southeast around to the northwest, leaving one-half of its circumference free and only one railroad leading out of it open for the escape of the populace. This railroad is monopolized for the transportation of the machinery and personnel of the government to the new capital at Jassy and for bringing to Bucharest the troops, munitions and food necessary for a siege. Consequently the inhabitants, when ordered to leave the city, were mostly obliged to take trolleys or wagons to the country towns.

Bucharest has grown since the foundation of the Kingdom of Rumania into a city of almost 400,000, which from the beauty of its buildings and the gayety of its social life claims the appellation of "the little Paris." The business was mostly in the hands of aliens, who constitute nearly a fourth of the population. Of these about half were citizens of Austria-Hungary and the rest Jews, who are denied the right of citizenship in Rumania except by special legislative act in spite of the Rumanian constitution which promises that all races and religions shall have equal rights.

Half of the civil population of Bucharest are said to have left the city and the rest are registered to be removed whenever the military authorities decide to do so. All food supplies in the city have been commandeered and are being doled out daily to the people who remain. With only the garrison and civilians engaged in defensive work to feed, Bucharest ought to be able to stand a long siege.

When Rumania entered the war last August it was with the understanding that Russia would send two or three hundred thousand men to her aid. This for some unknown reason Russia failed to do, consequently Rumania had to stand the brunt of an attack of the Bulgars from the south for which she was totally unprepared. For three months while Rumania was being crushed between the forces of Falkenhayn on the north and those of Mackensen on the south, Russia apparently did nothing, tho one might have expected either that troops would have been sent into Rumania or at least that the attacks on the Germans in Galicia would have been renewed. It is permissible to surmise that Stürmer, the pro-German

Russia to the Rescue

premier of Russia, is responsible for thus leaving Rumania in the lurch.

At any rate the moment Stürmer is removed Russia starts a strong offensive against the eastern side of the Carpathians for a distance of three hundred miles. From Bukovina to Bucharest they have established a line behind which the shattered remnants of the Rumanian armies may be reformed and rearmed. So far the Austrians and Germans have held the mountain wall, altho the Russians have sacrificed regiment after regiment in trying to break thru. Only at the pass of Kirlibaba in Bukovina has any perceptible progress been made.

#### Allies Attack Athens

On account of the refusal of King Constantine to surrender the artillery of the Greek army to the Allies a force of two thousand French and British marines were landed at the Piraeus and marched on Athens. Led by Admiral du Fournet in person, they took possession of the Stadium and the Zappeion, an exhibition building on the south side of the gardens of the royal palace. The Greek army had been disbanded at the demand of the Allies, but some reservists were hastily gathered and armed. Old men came in from the country with their hunting guns to take part in the defense of the capital.

The attempt of a French detachment to seize the arms in the engineers' barracks in the morning precipitated a conflict which continued all day long.

The French and British were besieged in the Stadium and Zappeion. A pitched battle was fought with rifle and machine guns between the Greeks on the Acropolis and the French on Philopappus Hill, to the south of it. Mars' Hill was also the scene of a fight between the Greek reservists and the French marines. The warships of the Allies at Piraeus bombarded the hills beyond Athens, and some shells are said to have fallen in the capital. Some months ago the King requested the Allies in case they bombarded Athens to avoid damaging the classic ruins, and it appears that the Allies have tried to comply with this request so far as possible. The Cretans fought with the Allies against the Greeks. Two or three hundred lives were lost in the day's fighting.

At five o'clock in the afternoon the Spanish and Dutch ministers arranged an armistice, and after a conference between Premier Lambros and Admiral du Fournet the latter agreed to withdraw all of his troops except a small guard on condition that the Greek Government surrender six of the ten mountain batteries demanded by the Allies.

#### The Message of Greece to America

The Greek Government has sent a note of protest to Washington against the action of the Entente Allies in occupying Greek territory, and trying to force Greece to enter the war. The Greek Government was willing to abandon its neu-

trality at any time to serve the national interests, but, the note continues,

Unfortunately it has not been possible for us, up to this moment, to obtain the necessary guarantees that Greece, in entering into the European conflict, would not be going to inevitable destruction. In remaining neutral the Greek Government had in mind solely Greek interests, and not, as has been repeatedly insisted on, sympathy with one of the two groups of belligerents. A Greek Government could think only of the interests of Greece. The geographical situation of Greece, which places it in very direct contact with one of the two groups of belligerent powers, makes the application of this policy of neutrality very difficult.

It is for that reason that she has been forced to submit to the occupation by foreign arms of her Macedonian provinces and to permit the belligerents to dispose of her ports, public buildings and works of art; that her highways and railroads have been forcibly occupied, while bridges and tunnels worth many millions have been destroyed.

The Greek Foreign Minister goes on to tell how the Entente Allies have inflicted one indignity after another upon Greece, assuming control of her railroads, mails, telephone and telegraph service and restricting her commerce, and how finally they have demanded that Greece give up her warships, artillery and munitions. The ships were surrendered, but the Government and the people, the army and navy, were determined never to give up the arms necessary for self defense.

But after the fighting in Athens the Government did consent to surrender part of its mountain artillery.

**German Sea Raiders** The activity of the U-boats is increasing and extending. From two to seven ships are reported sunk almost every day. No nationality is safe and no waters secure. The new German submarines have a longer cruising radius and can stay out for weeks without a tender. They now patrol up and down the Norwegian coast on a regular beat for the purpose of stopping British commerce with Norway and thru the Arctic Ocean with Russia. They range the coasts of France and Spain as far as Africa, and with the aid of Austrian and Turkish submarines are making the Mediterranean dangerous for vessels of all classes, including hospital ships. Since the "U-53" visited America and returned a repetition of such a raid upon British commerce on this side of the Atlantic is daily feared, and it is even suggested that a U-boat may be sent to the Pacific. The German surface boats are also growing bolder. Twice within a week they have come within gunshot of the English coast; on their last visit capturing an armed trawler. Consequently, insurance rates have gone up and the problem of supplying Great Britain with food has become alarming.

An American steamship, the "Chemung," was sunk by an Austrian submarine on November 26 about fourteen miles east of Cape de Gota, Spain. Due warning was given, and when the crew had taken to the boats the submarine towed them in to within five miles of the shore, where the men were picked up by a Spanish steamer.

CLOSING IN ON BUCHAREST

The German, Austro-Hungarian, Bulgar and Turkish forces as shown by the arrows crest the mountain on the north and the Danube on the south and are advancing along the railroads centering at Bucharest. The Rumanian Government has removed to Jassy, near the Russian border. The Teutonic armies are now in control of all the shaded area. The Russians are trying to invade Hungary thru the Kirlibaba Pass.

THE NEW PREMIER OF RUSSIA  
General Alexander Trepoff, who succeeds Premier Stürmer, perhaps because of the latter's suspected design of arranging a separate peace with Germany. Premier Trepoff's appointment is regarded as a triumph for the Duma

The captain refused to lower the colors, so the "Chemung" went down after being torpedoed with the American flag flying. She carried no munitions, but was loaded with spelter, copper wire, pig iron and cotton, which are contraband of war.

The British claim that Germany is not keeping the pledge she made to the President on May 5, and they publish a list of thirty-three vessels which it is alleged the Germans sank without warning between that day and May 8, causing a loss of 140 lives. A second list is given, naming 107 British ships sunk, where the crews and passengers were put in peril by being forced to take to the sea in open boats, at distances up to 200 miles from land.

The Germans, on the contrary, protest that they are acting in strict conformity with the Declaration of London, which England first violated and finally officially repudiated. They claim that all ships carrying contraband are liable to be seized or, if it is impossible to convey them to port, to be sunk. They also assert the right to treat armed merchantmen as warships and sink them without warning, and they support this by evidence that such vessels take the offensive, contrary to international law. For instance, Captain Coulbeaux of the French steamer "Mississippi" reported that he had opened fire on a submarine which had not attacked him either before or after his shot at it. The German people have become infuriated over the report of an officer on the "U-41," who was taken prisoner and has just been invalided home. He claims that a British war ship disguised as an American merchantman and flying the American flag, allowed the submarine to approach and then opened fire thru con-

cealed portholes, afterward trying to drown the survivors and neglecting their wounded. The British Admiralty, in its reply, asserts that the survivors were rescued and well cared for, but does not deny the use of the American flag as a ruse of war.

**The Losses of the War** We often receive letters asking for the losses of all the belligerent nations but we are unable to satisfy this very natural desire. Even the governments most vitally concerned, for all their spies and military experts, have not found it possible to determine with any exactness how many men their opponents have to draw upon as certain conspicuous blunders have shown, and it is not to be expected that such information as they have obtained would be given out to gratify the curiosity of neutral nations. The estimates of enemy losses which figure in the reports of the battles are altogether unreliable and often absurd. If they were summed up we should reach the conclusion that all the soldiers in Europe had been killed off long ago, yet we see that military operations are being carried on with undiminished vigor and over a greater area than at any previous time. Taken as a whole there are more men in the field than there were a year or two years ago.

Great Britain is the only country giving out official summaries of its losses from week to week. Germany publishes lists of the names of killed, wounded and missing, but it is impossible to ascertain from the net losses, for some of the missing may turn up again and many of the wounded return to the ranks, and the reports are more or less belated. In regard to all the other countries we can have nothing but guesswork based upon such hints as may be found in hospital reports and occasional and partial casualty lists. The most careful calculation of the available data that we have seen

is that made by the War Study Society of Copenhagen, and abstracted in the *Current History* magazine of the *New York Times* for December. We give below the general summary:

	DIRECT LOSSES OF HUMAN LIFE DURING TWO YEARS OF WAR		
	Dead	Wounded	Invalids
Austria-Hungary .....	718,000	1,777,000	533,000
Belgium .....	50,000	110,000	33,000
Bulgaria .....	25,000	60,000	18,000
England .....	205,000	512,000	154,300
France .....	885,000	2,115,000	634,000
Germany .....	885,500	2,116,300	634,900
Italy .....	105,000	245,000	73,500
Russia .....	1,498,000	3,820,000	1,146,000
Serbia .....	110,000	140,000	42,000
Turkey .....	150,000	350,000	105,000
Total .....	4,631,500	11,245,300	3,373,700

This brings the losses only up to August 1, 1916, the end of the second year of the war. To bring it down to December 15 twenty per cent or more should be added to the figures for England, France, Germany, Russia, Austria-Hungary and Italy, since these countries have been actively engaged in fighting during the last four and a half months. The losses of Japan, Montenegro and Rumania are not included. The column marked "invalids" comprises those now in hospitals from sickness or wounds and those who have been permanently incapacitated.

**The Capture of Chihuahua** It is now admitted that Villa's patient attempt to reduce the Carranzista stronghold of Chihuahua City has at last been crowned with success. After having repeatedly repulsed the assailants, the garrison under General Trevino expected that they would give up their project as hopeless. But in spite of very heavy losses Villa was determined to stake everything upon the capture of the city, and on November 27 General Trevino began the evacuation. The principal cause of the rebel victory appears to have been a shortage of ammunition on the part of the government troops. Of course the American Government is blamed for the embargo

AN ARITHMETICAL PROBLEM, STILL UNSOLVED  
If a snail climbs up a wall four feet every day, and drops back five feet every night, how long will it be reaching the top?

an arms which has checked their importation into Mexico, but Villa's men somehow seem not to run short of the necessary munitions of war, possibly because they have at one time or another captured no small store of government munitions. The taking of Chihuahua left imperiled a number of foreign residents, including half a dozen Americans, who had not been able to leave the city. Several hundred Chinese are said to have been put to death by the triumphant insurgents after the fall of the city.

Driven from Chihuahua City, the forces of the de facto government are making a new base for operations at Juarez. Villa is expected to attack at this point, and, if he does, complications with the United States will almost certainly arise, since Juarez is virtually the Mexican suburb of El Paso and any struggle carried so close to the border would endanger the security of the Texan city. Hundreds of refugees have crossed the border from Juarez to El Paso to find safety under the protection of the American army. The adherents of Carranza express their confidence that with proper reinforcements they can retake Chihuahua and perhaps trap Villa's elusive army in the city and annihilate it. General Murguia has sent a large body of troops to reinforce General Trevino's army to aid him in the campaign of recapture.

**Carranza's New Constitution** The civil war in Mexico has not prevented the meeting of the constitutional convention at Queretaro. At the opening of the convention First Chief Carranza laid his

program of projected reforms before the delegates. He recommended judicial reforms which would secure individual liberty against the arbitrary power hitherto exercised by the state governors and other executive officials. He favored legislation on behalf of labor, mentioning particularly the minimum wage and maximum hours of labor. Carranza said nothing as to the diplomatic aspects of the present foreign relations of Mexico, but suggested a constitutional change which would make it "necessary to have every foreigner who obtains title to real property to resign treaty rights with respect to such property and conform to Mexican laws." Other topics specifically mentioned in the address included a more liberal divorce law, the qualification for the franchise, encouragement of education, division of the landed estates among small owners, direct election of the president and abolition of the vice-presidency. Except for the changes recommended by Carranza, the new constitution will follow in general the outlines of the existing constitution established in 1857 by Juarez, the leader of Mexican liberalism in the last century.

**Caribbean Affairs** The de facto government in the turbulent little republic of Santo Domingo is now Captain H. S. Knapp and his 1800 American marines. On November 29 the captain proclaimed military government under instructions from Washington. The Dominican civil authorities will continue to exercise their regular functions under the protection of the force of occupation, but

no further revolutionary disturbances will be tolerated. The trouble with Santo Domingo in the past few months has been twofold. All regular government was interrupted by revolution and factional warfare, and none of the contending would-be governments could raise the money to meet its necessities, since the United States authorities controlled the customs of the republic and would not allow any faction to make use of them. Now that American occupation has become effective, the payment of the salaries of subordinate civil officials will be resumed. The United States will supervise the coming elections and then try to arrange for an agreement with Santo Domingo similar to that now existing with Hayti whereby the policing of the republic will be entrusted to a native constabulary under the supervision of American officers.

Cuba is discovering, as the United States has already discovered, that the real excitement of an election may begin after it is all over. For a month the presidential election in Cuba has been in doubt, both the Conservative candidate, President Menocal, and the Liberal, Dr. Zayas, claiming a victory. The first news was favorable to the Liberals, and the disappointment of later returns gave rise to numerous charges of fraud and even to demands for American intervention on the part of the more extreme partisans. Re-balloting will be held in two provinces where the returns are most open to question.

**The Food Boycott** The high cost of the dinner pail is the leading issue now before the American people. The suggested remedy is an embargo on exports of food from the United States, and this will be urged at the forthcoming session of Congress by a number of representatives from the great cities who will have behind them the class interest of organized labor. The American Federation of Labor has gone on record as unanimously opposed to any further exportation of foodstuffs until prices are restored to normal. The National Grange on the other hand attributes the rising prices of farm produce to poor crops and the increased cost of what the farmer must buy, and declares against any embargo on foodstuffs, suggesting that if there must be an embargo it had better be on munitions.

Another remedy which many prefer to the food embargo is the food boycott, because by this means food speculators may be induced to unload their stock upon the market to prevent the boycott from continuing until normal prices are restored. Housewives' Leagues, Consumers' Associations, civic organizations of all sorts are lending their support to the movement. In New York City and Chicago the retaining of eggs in cold storage till prices reach a maximum is the chief subject of complaint. Therefore in these cities the consumers have tried more or less successfully to make eggs at present prices taboo. Conferences of consumers in

Underwood & Underwood

#### CHANGES IN THE BRITISH ADMIRALTY

Rear-Admiral Sir David Benty (on the left), who commanded England's cruiser squadron in the battle of Jutland, has been named Commander of the Grand Fleet to succeed Sir John Jellicoe, now promoted to First Sea Lord of the Admiralty. Admiral Jellicoe has been in supreme command of the British home fleets since August, 1914.

An American Press

## HOW AUSTRIA REGARDS PEACE

A cartoon in which Peace remarks to John Bull, who is shutting her out of Europe's council chamber: "I won't be put off this year, Mr. Bull!"

Louisville, Kentucky, and Toledo, Ohio, determined to boycott both eggs and butter. The Woman's Good Government League in Spokane, Washington, agreed to decrease their purchases of eggs, butter and turkeys. In Philadelphia a wholesale potato boycott left unsold 180,000 bushels which the food speculators had hoped to sell for two dollars a bushel. A meeting of Texas consumers summoned by Mayor E. T. Tyra of Fort Worth planned a municipal market and a municipal cold storage plant. In many cities the arm of the law has been invoked, notably in Chicago where a city ordinance, hitherto more honored in the breach than the observance, prohibits the storage of eggs for more than ten months. In Lincoln, Nebraska, cold storage houses have been ordered to furnish the state pure food department with statistics as to the quantity of eggs and other food which they now have on hand.

**Railroad Questions** The Government is rapidly pushing the chosen test case on the constitutionality of the Adamson law to a final decision. The formal negative decision by Federal Judge Hook in the Missouri, Oklahoma & Gulf case on November 22 has been appealed by the Government, and every effort will be made to get a verdict from the Supreme Court before the eight-hour law actually goes into effect on the first of January. If the question of constitutionality remains undetermined after that date the Government will not prosecute railroad companies refusing to meet the new schedule of wages and hours until after a decision has been made.

The testimony on railroad affairs taken by the Newlands joint congressional committee has resulted in some interesting discussions. Mr. Thom, representing the railroads, prophesied that private ownership of railroad properties could not continue unless better conditions were secured. He advocated federal incorporation and the issue of stock without par value. Representa-

tive Sims tentatively suggested federal ownership and a federal guarantee of a minimum dividend or of bond issues as possible solutions to the financial problems of the railroads. Senator Cummins believed that many railroads were heavily overcapitalized, and that a physical valuation of railroad properties should precede federal incorporation. Mr. Thom denied that the railroads were now overcapitalized. He introduced into his testimony a table showing railroad earnings and expenses from 1910 to 1915. During these years the average dividend on stock had decreased from over seven per cent to less than three and a half, and the total income of the railroads decreased by over a hundred and seventy million dollars, a figure all the more significant from the lessened value of an equal sum of money in 1915 as compared with 1910.

### Naval Contracts Awarded

Secretary Josephus Daniels awarded on November 29 naval contracts providing for the construction of four battleships at eleven million dollars each, two fleet submarines and twenty-seven coast submarines. Bids for constructing the authorized new cruisers and battle-cruisers have not yet been completed. The total cost of the ships authorized by the naval contracts already concluded amount to more than sixty-five millions. The battleships will be sister ships to the "California" and the "Tennessee," except that they will carry sixteen-inch guns instead of fourteen-inch. Two will be built by the New York Shipbuilding Company and two by the Newport News Shipbuilding and Dry Dock Company. The newly authorized submarines will, it is reported, resemble our German visitor, the "U-53."

**How Many and How Rich?** The latest estimate of the federal census bureau places the population of the United States at 102,826,309, which added to our military and naval service and our overseas possessions reaches a grand total of 113,309,285. The treasury department, using a different basis of calculation, puts the population of the continental United States at a trifle over one hundred and three millions. The returns of the federal income tax, just made public by the Commissioner of Internal Revenue, are even more interesting than the census estimates, because they show more rapid change. The total yield from the individual income tax is nearly sixty-eight million dollars, of which New York State alone paid over thirty millions. 336,652 persons paid personal income taxes. The most significant aspect of the income tax statistics is not the great national wealth they indicate, but its rapid increase over last year, especially among the highest incomes. Those in the highest class, with annual incomes of more than half a million dollars a year, increased in a twelvemonth from 174 to 329. Or perhaps the increased yield of the tax

may not signify so much increased prosperity as the increased vigilance of the collectors. Other internal taxes also yielded abundantly; the corporation tax nearly fifty-seven millions, the emergency revenue tax over eighty-four millions, and other internal revenue taxes bring the total up to more than half a billion. The new inheritance tax has thus far yielded but little revenue, but since it has been in effect but a few weeks the twenty thousand dollars now to its credit in the national treasury may be but a beginning of its fruitfulness.

**Is There a Cattle Epidemic?** The discovery of several cases of what was thought to be the foot and mouth disease in cattle shipped to Kansas City from Nebraska created no little alarm throughout the cattle raising states. The Union Stock Yards of Chicago declared a temporary embargo against cattle, horses, sheep and swine from Kansas, Missouri or Nebraska. A quarantine against shipments from the same three states was also adopted by Colorado, Oklahoma, Texas, and many other states from Massachusetts to Wyoming. Shipment from the stockyards of Kansas City, St. Joseph, East St. Louis and Chicago was prohibited, and the yards were carefully disinfected. It is not yet certain that the observed symptoms are properly diagnosed as the dreaded foot and mouth disease, but the authorities are neglecting no precaution. Federal veterinary experts are making the necessary tests to determine whether the many suspected cases now under observation in various stockyards have the disease.

PRESIDENT OF THE ROCKEFELLER FOUNDATION

Because the increasing scope of the Rockefeller Foundation demands the entire attention of its executive head, Dr. George E. Vincent, President of the University of Minnesota, is to succeed John D. Rockefeller, Jr., as President of the Foundation. Mr. Rockefeller will become Chairman of the Board of Trustees.

# AFTER WAR COMES PEACE

BY HIS EMINENCE JAMES CARDINAL GIBBONS

ADDRESS the American people on the subject of peace. For we are in the midst of a terrible war, we Christian people, but after war shall come peace, and it is time to look forward to permanent, enduring peace.

The Church advocates the reign of peace, even tho from the foundation of Christianity the Church itself was either pursued with unrelenting fury or bitterly antagonized or opposed.

The people of the United States, isolated by geographical situation from dangerous proximity to aggressive adversaries, and providentially protected by national boundaries, are enabled to pursue a humane, enlightened and statesmanlike policy by fostering and developing our relations with all the nations of the world. Our ideals are sound because they are based upon laws which are intimately interwoven with the Christian religion.

While part of the world is at war, we, in America, grown up as one corporate body, enjoying the same political rights, which manifest the humanizing and elevating influence of Christian civilization, are devoting ourselves to the pursuit of a single object—that to bring about the reign of peace.

For myself, as a citizen of the United States, and without closing my eyes to our shortcomings as a nation, I say with a deep sense of pride and gratitude that I belong to a country where civil government holds over us theegis of its protection, without interfering with us in the legitimate exercise of our sublime mission as ministers of the Gospel of Christ. Our country has liberty without license and authority without despotism. We rear no wall to exclude the stranger from us. We have no frowning fortifications to repel the invader, for we are at peace with all the world. We rest secure in the consciousness of our strength and our good will toward all. Our harbors are open to welcome the honest immigrant who comes to advance his temporal interests and to find a peaceful home.

But while men acknowledge that we have a free government, perhaps we do not receive the credit that belongs to us for having also a strong government. Yes, our nation is strong. And our strength lies, under the overruling guidance of Providence, in the majesty and supremacy of the laws, in the loyalty of her citizens, and in the affection of her people for her institutions. There are, indeed, great problems now employing the earnest attention of the United States, but I have no doubt that, with God's blessing, these problems will be solved by the calm judgment of our people, without violence or revolutions, or any injury to individual rights.

It is a pleasing reflection for the American people that the most ardent advocates of peace among the nations of the world, the most unselfish workers for it, who are devoting money, high intelligence, and exalted position to its attainment, are her own sons and citizens.

The friends and advocates of international arbitration are engaged in the most noble and benevolent mission that can engross the attention of mankind—a mission to which are attached the most sublime title and most precious reward. "Blessed are the peacemakers, for they shall be called the children of God." The work of the League to Enforce Peace is especially to be commended; it is to be hoped that its efforts will be fruitful.

International arbitration helps to avert threatening hostilities. It would be a blessing to humanity if all national controversies in the future were decided by

arbitration. The just cause of any nation should be vindicated by a court of arbitration rather than by an appeal to arms. This is an amicable system which protects the rights of the weak and at the same time does not humiliate the strong.

Several years ago I had occasion to say that "when the world's history is written the twentieth century will enjoy the proud distinction of being styled preëminently the century of peace." Instead we have had, and we are in the midst of, a war; the most terrible war in history.

The twentieth century will no longer deserve the title of the century of peace, but I hope that peace will follow as a matter of course after the war. It must be a permanent, ever enduring peace, because it will be a peace bought dearly.

If the entire Christian world will unite in the single effort of bringing about peace, peace would follow. Never before have more strenuous efforts, more practical and more sincere efforts, been made to bring about happier relations between man and man, nation and nation, than will be made when the war is ended. And to begin even now, in the midst of war, is none too soon.

It is a splendid tribute to the high tone of mind of the present day, to the finer feelings of our generation, and to the inborn love of justice and fair play of our people, that war, with all its attendant horrors, is condemned and declared both unworthy and incompetent to be the final arbiter between right and wrong.

Christ's mission on earth was to establish a triple peace in the hearts of men; peace with God by the observance of His commandments, peace with our fellow men by the practise of justice and charity, and peace within our own breasts by keeping our passions subject to reason, and our reason in harmony with the Divine law. He came above all "to break down the middle wall of partition" that divided nation from nation, that alienated tribe from tribe and people from people, and to make them all one family acknowledging the Fatherhood of God and Brotherhood of Christ. But, looking back and contemplating the wars that have ravaged the Christian world during the last two thousand years, one might be tempted at first sight to exclaim in anguish of heart that the mission of Christ was a failure. My purpose is to disabuse the faint-hearted of this discouraging impression, and to show that Christ's mission has *not* failed, but that the cause of peace has made decisive and reassuring progress *despite the wars*, and the advances it has already made are an assurance of its ultimate success.

For many centuries there was an unbroken series of wars of defense, of invasion, of extermination. So continuous were military campaigns that a sacred writer refers to a time in the year when hostilities were annually resumed: "It came to pass at the return of the year, at the time when kings go forth to war." They had their season for fighting as well marked as we have our seasons for planting and reaping.

But the blest influence of the Church, of our Christian civilization, has been experienced not only in reducing the number of wars, but still more in mitigating the horrors of such strife.

Jesus Christ founded a spiritual republic two thousand years ago. The republic still endures because He established it not by force but by an appeal to the conscience and intellect of humanity. The spiritual kingdom that He founded exists to this day and is continually expanding. So long as the moral Ruler of the world holds the reins of government, which He never surrenders, we have nothing to fear, provided we put our trust in God.

Baltimore, Maryland

BEHIND THE MEGAPHONE, AT THE CAMERA, AMONG THE ACTORS OR UP IN A BALLOON  
MR. GRIFFITH DIRECTS EVERY MOVE OF HIS PICTURES

# PICTURES VS. ONE-NIGHT STANDS

BY DAVID WARK GRIFFITH

PRODUCER OF "THE BIRTH OF A NATION," "INTOLERANCE"

**N**O small part of my twelve years on the stage was spent with traveling companies. Some of these were "first companies" with celebrated actors or actresses, some were second and third and fourth. We actors sometimes had to take what we could get.

In these years I witnessed quite all over the country an interesting phenomenon. It was the devotion of thousands of Americans to a theater that was, taken generally, I think, as little deserving of such devotion as it ever has been in the long history of drama.

We played in communities large and small. The large communities were discriminating. They were exacting. They got the best. The small communities, which to me seem to make up America, got very little. We were accepted as a matter of course in the large communities; in the small our arrival was an event.

They were starved spiritually, these small communities all over the reaches of the land, else they would not have endured the theater that was given them. For weeks in vain the theatergoers in the little centers watched for announcements. At last into town we

limped, as it were, usually very tired after long stretches of one-night stands. We acted and we were away again. Sometimes we carried scenery, more or less; generally we did not. As I look back now it seems a crude, almost humorous spectacle—this spectacle of the theater using the same scenery, yes, and the same music, often, for nearly every play, whether comedy or tragedy, a dirge or a delight.

It was all crude and inadequate, this business of our traveling to the small community that needed enlightenment most, of the storekeeper or real estate man who owned the theater opening its cold and cheerless desertion to receive us, and the faithful who came to see us perform. They paid down their dollars and dimes to enter the theater. The manager stoked the furnace; the town orchestra tuned its rusty strings. The orchestra struggled, the building was warmed, the old and familiar interiors and garden scenes retouched with paint now and then were presented to view, and we actors acted in true "high-falutin" style with what enthusiasm we could muster for this one of many audiences we knew we should very unlikely ever see again. They

loved the stage, these faithful, surely. I know of no better illustration of the hunger in us all for the traditional form of entertainment. And they paid, because they had to pay, very greatly for what they enjoyed, crude though it was. For the business man of the theater made clear to them that he had a hundred expenses to meet, interest on a building expensive to build, to maintain, to heat, light and advertise; that he had to charge from twenty-five cents up to two-dollars or more for each seat because the theater was used only once a fortnight or so.

Doubtless this sorry spectacle would have continued thru many decades had not Science come to the rescue of these typical Americans in the small places.

Science looked askance on the poor actor man and told him his one-night stands were over. Science made an end of a chilly theater and a backward play. It made an end of inadequate scenery, magically, as it were, snatching the faithful from the old, old interiors off to beautiful hours in the glorious spots of the earth. Already the motion picture is the world's chief form of entertainment, the greatest spiritual force the world has ever known. Here in

America it has worked in the course of seven years or so a phenomenal change and it is expanding by leaps and bounds. Already it is the fifth industry in point of riches in America and by all odds the most powerful in point of influence.

Here in America actors, managers, playwrights and producers soon discovered the workings of a tremendous change in the traditional form of entertainment. They watched the end of traveling companies. There are practically none now; those that try the road, save to reach the largest centers, die miserably. Here before me are figures, in fact, that show that last year in twelve months one of many copies of a single film in Illinois and the South played to more people and to more money than all the traveling companies that put out from New York played to in fourteen months. Disregarding the few exceptions, from which I hope something unexpectedly good may come, the old stage is gone, and the new stage is here. It is here, I think, primarily because of the working of economic law, because the man in the small center, and in the large—the typical American, in a word—has discovered that Science offers him something vastly more satisfying, more interesting and more influential for ten cents, or even for five, than the old stage gave at two dollars, or could give at any price at all.

**A**FTER years of experience on the stage as playwright and actor, I am quite sure not only that the new stage will continue to improve, but that it has vastly greater potentialities than the old, not only in point of reaching vastly more millions of people but in actual and intrinsic artistic power. For it is clear to me that not only can a producer express any old-stage idea on the new stage at least as effectively as could be done on the old stage, but more effectively. And there are many ideas that I can express, and have expressed, with the pictures that could not be expressed on the old stage at all. Within the limitations of the old stage, to illustrate only one phase of the situation, it was impossible to employ more than two plots and difficult enough to have even two. In my "Intolerance," which I take because it comes first to mind, there are four plots, each in a different century, each in a different part of the world, all drawn together at the end. And I can conceive a play set in one spot, in one stretch of time, with six or seven plots all woven together.

Within the limitations of the old stage it was impossible to employ many technical means that are used with fine effect in the motion pictures. I can accelerate action in a great many ways—by letting two or three stories or plots race along side by side; I can open a play with so simple a thing as a glimpse of a rose, or a glimpse of a beautiful picture; and in a flash I can take the audience from the banks of the Euphrates in Biblical times down to Me-

dieval France, or down to the story of a little girl of today.

Acting itself has been improved with this development of the technical means of the play. Many actors have told me that they thought that acting on the old stage was difficult, but that it is nothing compared with acting in the new. Not often, in fact, do we find an actor or actress trained in the old school who is successful in the new. Those who succeed are those whose art is simplest and finest. Mrs. Fiske was very successful in her "Tess." Leo Dietrichstein would be successful, I am sure. Irving or Mansfield would be wonderful. Two years ago there was hardly any real actor depending upon the motion pictures. We paid very little attention to the old-stage actors. And when at last we took them and tried them we found they were far beneath in real acting power the ones we had trained. The problem of the old stage and of the new is the same—to permit a playwright to express himself to his audience. The technique is different. The results, I believe, in the new are vastly more effective than in the old, and surely the motion pictures are satisfying millions whom the old stage never satisfied at all.

I use the word "satisfying" deliberately as descriptive of the needs of our civilization. We have little time for art. We make no pilgrimages to its shrines. Art, in short, satisfies a passion that we Americans are prone, the great mass of us, to satisfy in the form that is nearest to hand because we have so little time between the swift stretches of our increasingly busy life. I have observed often that hunger for beauty in the forms of any particular art is usually appeased by gratification in another. I have observed this particularly in Americans. Few indeed of us go from a motion picture play to a theater, or from a theater to an opera, or from an opera to a circus. Surely most of us would not feel after seeing whole reels of beautiful color pictures the passion for paintings that we felt before seeing them.

I think that this observation has point. It makes clear, I believe, that from reasons of time no less than of money most of us are likely to select the art that satisfies us most and is most convenient and least costly. I should be little surprised, to illustrate, if many devotees of the Metropolitan Museum of Art in New York City have discovered that they can get at a neighboring theater for ten cents, with little expenditure of energy, of time and with as little loss of money as they would spend in carfare to reach the museum, something that satisfies their hunger for beauty and for entertainment.

And still the motion picture as it is, is not at all comparable to what I expect it soon will be. Let us imagine a Massenet writing great music to great films or producing great films to be shown with great music. Would not opera and orchestra as they now are suffer as a result? Let us imagine

miniature pictures designed for home entertainment, by the fireside, and for library reference. Let us suppose that color pictures are perfected. May I ask if, after seeing a play set in the Grand Canyon of the Colorado, say, with all its marvelous scenery seen even more accurately than the eye without aid of camera lens can see, we should care to visit any art museum? And who, having heard while seeing this composite the music of a Massenet, would have spiritual energy left for opera?

These developments of the motion picture doubtless seem to many most far-fetched. And yet I need but point out that science is busied with its share of these improvements and has already, by dint of several years of intensive work by six or seven scientists, got the motion picture camera perfected so that, without tinting, without limitation or liability to error such as prevailed in the only color pictures ever employed, pictures may be taken without considerable additional cost and with all the colors of the universe.

**I** DO not know what will be the future of the motion picture because the achievements of science are nearly always impossibilities until they appear. But I do believe that the arts and the passion for them must always endure tho they may not endure quite in the forms that we have them. Surely there will be music as long as people live. And books and poems and short-stories. Surely we shall always love beautiful objects of art such as we find in the museums. These old arts will not be lost. Yet I think they will in their forms be altered. Perhaps, for us busy Americans, science with wonderful hands will shape them into a single medium that the most sanguine of us never have dreamed of.

Certainly those who love acting and the play meanwhile need suffer no apprehension. I am sure that acting and playwriting are not gone; rather they are to enjoy a lusty growth, with rewards in terms of money greatly increased, and rewards in terms of influence such as we writers long have dreamed of. See what promise there is offered by such a film as "The Birth of a Nation." With the old stage the playwright and the actor each evening could reach a thousand persons or so. One evening not long ago while twenty-four copies of "The Birth of a Nation" were being played to full houses in the United States at prices up to two dollars and in South America at opera prices, the same film was being shown in Canada and in Australia, and at the Drury Lane Theater, in London.

I know, finally, that because I am a producer of motion pictures, that because I left the old stage for the new, I am likely to be criticized to my own hurt for the conclusions that I have drawn. Yet I have merely tried to make clear that the arts in form are susceptible to a kind of economic and artistic determinism that works ruthlessly to the survival of the fittest.

The whole civilized world recognizes the importance of absolute purity in food as a safeguard to the health of the people.

If you have at heart the welfare of your own family—which of course you have—begin at the very foundation of good health by studying food values closely. See to it that only pure and wholesome materials are used in preparing the food for the home table.

When you buy baking powder, read the label carefully. Be sure that it is

## ROYAL BAKING POWDER

ward!

made from cream of tartar and not from mineral acids.

Royal Baking Powder is made from cream of tartar, derived from grapes—a natural, wholesome food.

Some baking powders are made from alum or from phosphate—mineral acid salts used as substitutes for cream of tartar because of their cheapness.

Royal Baking Powder produces appetizing and digestible food, insures the quality of cake, biscuits and muffins, and safeguards the health of the family for whom you provide.

# THE ANGELS' ANTHEM

BY HARRY KEMP

There was music on the hillside and singing in the glen  
And anthems heard in meadows when Christ was born to men:  
The King slept on in blindness, tho troubled in his sleep;  
The High Priest's ancient wisdom held no such lore in keep;  
The Trader and the Merchant so bound by gain and rule  
And all the learned Scholars who founded school on school,  
The Consul and the Soldiers, their eyes were sealed, that night,  
And only on the Shepherds there burst the wondrous sight:  
The Shepherds heard the singing that charmed the listening air;  
The Shepherds saw the glory; the Shepherds were aware:  
There was music on the hillside and singing in the glen  
And anthems heard in meadows when Christ was born to men!

## THE TRUSTS AND THE PEOPLE GET TOGETHER

BY GRANT FOREMAN

THE people of Oklahoma who have to wait in the stations, ride on the trains and pay the freight, created a commission to establish their theory that public service corporations are licensed by the state primarily to serve the public. They bedded its authority deep in the constitution of the state and employed twenty-five or thirty sections of that document to define its powers.

The Corporation Commission, elected by the direct vote of the people, is composed of J. E. Love, chairman; George A. Henshaw and W. D. Humphrey, three very busy, tactful and earnest officials. They are given extensive authority over all corporate activities in the state, subject only to the caution of the constitution in the most general terms that their orders are to be "reasonable," and to limited power of review by the Supreme Court of the state. No other state court may modify their acts.

The broad jurisdiction of this commission may be observed in a few sample cases appearing on a monthly docket. A controversy between citizens of a town and a street railway is adjusted by the commission. Complaint of telephone service is heard. Citizens demand a viaduct over a railway. One telephone company seeks service from another. A village needs an express office. Another wants a depot. A shipper on a railroad requires facilities for handling freight. A town demands cheaper gas. A light and power company is charged with failure to furnish proper service. Complaint is made against a railroad company for collecting excess fare from a passenger without a ticket. A railroad company was required to stop a train at a certain station; another to maintain a telephone in its depot for the information of the public.

After the advent of statehood in 1907 and before June 30, 1915, at more than 300 towns or stations in Oklahoma, new or improved depots were ordered built after plans approved by the commission. For the comfort and convenience

*As a lawyer practising in Oklahoma since it became a state, Mr. Foreman has watched the Corporation Commission work out successfully its problem of making the public service corporations actually serve the public.—THE EDITOR.*

of the traveling public an order was made requiring railroad companies at every station to bulletin the time of arrival and departure of trains and if delayed to state how long. Depots must be kept clean and well lighted, and warmed in cold weather; provided with wholesome drinking water and clean, lighted and sanitary toilet rooms. Station agents are enjoined to be courteous to the public, and finally, the order itself is required to be posted in a conspicuous place in each waiting room.

Pleased with the work of the commission, the people have enlarged its authority from time to time and a recent legislature committed to it jurisdiction of the vast natural resources of oil and gas; and last year when overproduction had seriously reduced the price of oil, the producers appealed to the commission for protection against the powerful purchasing companies. After full hearing the commission established a minimum price and where the purchasers were not able to take all the oil produced, required a method of prorating the runs so that all producers might fare equally.

Under the anti-trust law of the state, the commission in a number of cases in various towns fixed the price of ice, compelled the dealers to deliver and weigh it when requested, and to keep it wholesome. A cotton gin was required to gin cotton for a complainant and the commission fixed the price. A cotton compress company was directed to operate its compress and another to change the method of weighing cotton. The commission regulated the price of kerosene and lumber in other towns and prevented a combination of laundries in Oklahoma City from advancing prices.

The commission is called on frequently to determine what constitutes reasonable train service. A multitude of unfair freight rates have been considered and corrected. Refunds varying from a few cents to many dollars have been and constantly are being secured for patrons of railroads, and untold savings have been made to the people of Oklahoma by regulation of the freight rates.

The commission deals in a direct manner with questions before it and the humblest citizen may apply for relief without cost. Many controversies that in other states would be heard by the courts, if at all, are considered promptly and the relief applied expeditiously and effectively; for in many cases if relief is to be afforded at all it must be immediate; such as arbitrary cutting off of telephone or light service; difficulties of shippers in securing delayed freight, or cars in which to ship; claims for lost baggage, etc.

Ninety per cent of such complaints submitted to the commission are adjusted in the most informal manner. So potent is the commission that frequently a letter to the offending corporation brings satisfactory adjustment, and often a telephone call will accomplish what otherwise, if the law afforded a remedy at all, could be secured only at the end of a tedious and expensive lawsuit. Where his method fails the matter is set for hearing according to the established procedure, either at the capitol or at some other town convenient to the parties interested.

Vested with judicial functions and large executive powers, with authority to institute proceedings, to enforce its mandates and to punish for violation of its orders by fine as for contempt, accountable in a limited sense to only one court in the state, the Corporation Commission is an extraordinary agency of the people of the state. It is responsive to every demand, and by its simple procedure and expeditious method of applying remedies avoids the criticism most often directed at the courts.

ABBEVILLE PUBLIC SQUARE WHERE THE MOB GATHERED AND THE LYNCHING BEGAN

# THE LYNCHING OF ANTHONY CRAWFORD

BY ROY NASH

**C**OTTON-SEED was selling at ninety cents a bushel on Saturday morning, October 21. A wealthy negro named Anthony Crawford drove into Abbeville, the county seat of Abbeville County, South Carolina, with two loads to be baled; and while waiting his turn at the gin, went into the store of W. D. Barksdale to sell a load of seed.

As to just how the dispute started, no one knows but Mr. Barksdale. The version current on the Abbeville curb is that Barksdale offered eighty-five cents for his cotton-seed. Crawford told him he had already received a better offer and Barksdale called him a liar. Whereupon, (and from this point the evidence all tallies) Crawford cursed the storekeeper and accused him of trying to beat him out of his money. Barksdale turned back into the store and left Crawford giving free play to his temper outside until a clerk came flying out with an ax handle in his hand. Crawford backed off toward the square and was promptly arrested. By the time the policeman and the negro reached the municipal building a hundred yards distant, the crowd was streaking across the plaza from every store around the market place, intent on giving the negro a whipping for daring to curse a white man. This crowd dispersed without having laid hands on Crawford, and when they had gone Chief of Police Johnson collected fifteen dollars bail and let the negro out a side door. Crawford started toward the gin a short hundred yards straight back of the municipal building, where his two bales of cotton were waiting.

There was a second rush across the square as some one

*How the author gathered the facts of this lynching may be guessed from an item in the Abbeville "Press and Banner" of November 22: "Roy Nash, of New York City, spent several days in Abbeville recently looking over Abbeville county farm lands with a view to making extensive investments. So far no sales have been reported, but Mr. Nash proves that he is interested in Abbeville by subscribing to The Press and Banner."—THE EDITOR.*

ANTHONY CRAWFORD

spied him going toward the gin. He probably would have gotten off with a good beating if he had been a humbler sort, but Anthony Crawford was a successful farmer worth over twenty thousand dollars, far richer than most of those who pursued him, and proud. He once said to a friend, "The day a white man hits me is the day I die." When he heard the hue and cry behind him, Crawford made for the boiler-room of the gin, down in a partially covered pit, where he took off his coat, picked up a four-pound hammer, and waited. McKinny Cann, a rough chap who sells buggies and feed for J. S. Stark, led the rabble. As they closed in on him, Crawford smashed in Cann's skull, and would have killed him had not some one grabbed his arm as he aimed the blow. Then a rock from above caught the negro in the head and he went down. To their credit be it said, the superintendent of the gin and two furniture dealers, W. A. Calvert and his son John, tried to prevent what followed. These citizens of Abbeville took Crawford into the road where everybody could get at him. Under their ministrations, the negro regained consciousness, got on his feet, and fought his way for fifty feet up the road before a knife plunged into his back again. While he was down and bleeding, two hundred white men kicked him into unconsciousness—we spare you the rest.

Enters the law.

The police, as soon as they turned Crawford out of the municipal building, had urgent business further up the street; but Sheriff Burts ran to the gin as soon as the fight started. He begged the boys not to kill the

# Comptometer

## Adding and Calculating Machine

### SERVICE BULLETIN

Teaching Short Cuts by Correspondence.

"How would you work this?" wrote a Bookkeeper.

It was an example of Averaging Accounts—all set down and each step of the operation indicated. The letter concluded thus:

"P. S. I did this on the Comptometer in three minutes. Do you know of a shorter way?"

We did.

And the Bookkeeper got a letter explaining it.

Another Accountant wrote about a Cost problem—wondered if we could suggest a shorter method on the Comptometer. Our letter in reply showed how the operation could be shortened and simplified.

Gradually the number of such inquiries increased. The satisfaction expressed by those receiving instruction by mail was reflected in many letters of thanks for the service and the benefits received from it.

This finally led to the establishment of a regular Comptometer Correspondence Course of Instruction. For several years it has been growing and developing. Now it is one of the important features of Comptometer Service. Even those who are not Comptometer users, often avail themselves of the advice and suggestions offered by this Department.

The basis of this Course is an

Instruction Service Sheet which carries a list of more than fifty arithmetical operations in Accounting. The recipient checks the items upon which he desires instruction. The Course continues until all the items so checked have been carefully covered.

This service is designed especially for Comptometer users, but is open to other inquirers without cost.

#### As They See It

Fort Wayne, Indiana

We are grateful for your series of Instruction Sheets on short methods of calculation with the Comptometer. In our estimation, they are a great advantage in performing the daily routine of almost any mercantile or manufacturing business.

INDIANA PAINT & VARNISH Co.,  
S. W. Newell, Manager.

Wichita, Kansas

The young lady operating the Comptometer advises that a great many points have been made clear to her through the easy Correspondence Course, which has enabled her to increase her speed.

A. G. Johnson,  
District Revenue Supervisor.

#### Personal Instruction Service

The service rendered through our Correspondence Course is simply designed to supplement the personal service of the Comptometer staff working from sixty-five different offices scattered about the country from coast to coast.

Every Comptometer salesman is personally trained to give instruction on the application of the Comptometer to all kinds of figure work.

To illustrate: "Our

Comptometer clerk has left," phones a client to the local Comptometer office, "we must have somebody right away or we will be swamped!"

"All right," answers the Agent, "I'll instruct another clerk so that she can carry the work right along."

"What will it cost?"

"Not a cent."

That will give you a glimpse of what we mean by Comptometer Service. But there's much more to it than that—more than can be even suggested here.

There would be no call for such special instruction if the Comptometer were nothing more than an adding machine—if it were practical for nothing but adding. It is precisely because it does so much more than add, that instruction is needed to teach the user how to apply it on *all* the many kinds of work it is capable of doing.

he pleaded, he cajoled, he entreated his constituents to consider him and his duty; he explained that they were putting him in a terrible hole; and at the end of forty-five minutes, by promising Leslie and Jack Cann and their followers that he would not remove the negro from the county jail nor make any other move until they were sure their brother had not been fatally hurt, the sheriff persuaded them to permit him to arrest the mass of pulp lying there in the road and cart it half a block to the county jail.

At the jail, after the sheriff had summoned a doctor to patch him up for the next round, Crawford told John Scoven to get his coat from the gin and give his bankbook to his son; and during the afternoon he talked rationally to a trusty.

"I thought I was a good citizen," he said.

What is the evidence on this point? Anthony Crawford's life and character embodied most of the things that Booker T. Washington held to be virtuous in a negro. His father, freed from slavery, acquired a cotton patch seven miles northwest of Abbeville. Anthony, born in January, 1865, used to walk that seven miles to school in the morning and back at night, so eager was he to educate himself. At his father's death, Anthony fell heir to the clearing and by dint of hard work and thrift increased his holding to four hundred and twenty-seven acres of the prettiest cotton land in the county; as his family increased to twelve sons and four daughters, nine of whom are now married and settled in homes of their own, near enough to their father's house so that all could hear his voice when he called from the front porch. For nineteen years their father was secretary of the Chapel A. M. E. Church, and as its chief financial prop he was undoubtedly something of a dictator; but aside from that, three days' diligent conversation did not unearth another tangible thing against Crawford's character.

While he lay on his couch of pain in the jail, the afternoon wore peacefully on in Abbeville. For all one who arrived on the noon train could see, no tragedy was impending more imminent than the boll weevil a hundred miles away over in Georgia—not up to three forty-five. Then some evil tongue turned loose the rumor, "The sheriff is fixing to take the nigger away on the four o'clock train."

No such concept of his duty was in the sheriff's mind; indeed, the mob was making for the jail as quickly as he, for Sheriff Burts is not built for speed. They swarmed in the front door to meet him coming in the rear. Neither he nor Jailer Foster McLain made effective protest when they took away their guns and keys. Up the three flights of stairs the leaders rushed as fast as they could unlock doors (for the Abbeville jail is

GOVERNOR MANNING OF SOUTH CAROLINA

He has served notice on the lynchers that the governor's powers stand behind the prosecution

unusually well built) and let themselves into the cell where the magnificent vitality of Crawford was battling with death. They dragged his broken body down and threw it to the cheering

SHERIFF BURTS

throng at the door. Thru the negro quarter they dragged Crawford by the neck as a hint to "good niggers" to continue so, but on coming into a white residential district they threw their victim on top of a passing load of slabs, and so passed in triumph thru the streets of this city of handsome homes, surrounded by lawns adorned with late-blooming marigolds and the lovely old fashioned princess feather.

Altho he was dead before they reached the fair grounds, they hanged Crawford to the solitary great pine that stands in the row of junipers at the gate, and expended a couple of hundred cartridges in firing at his body. Coroner F. W. R. Nance led a jury up the hill at sunset, good men and true who, without going thru the formality of taking evidence, announced their verdict that Anthony P. Crawford came to his death at the

hands of parties unknown to the jury.

That Saturday night the boys were drunk and propositions to go out and clean up Crawford's fifteen children and their kin met with such hearty response that, as one eminent citizen said, "I knew if they ever started they'd shoot every nigger along that seven miles of road." So three or four leading business men intervened and postponed the party by suggesting a meeting on Monday to settle the fate of the Crawford family.

The Monday meeting proved as big an attraction as the Democratic primary, even Anderson County, twenty miles to the north, being well represented. The boys were all for immediate action. Things were looking so ugly that Jack Perrin, for thirteen years clerk of the court and one of the most respected men in Abbeville, hurried over to the bank and persuaded its president, Mr. J. Allen Smith, to assert his influence. As a sop to Cerberus, these eminent citizens suggested to the riff-raff, the Canns, and the crackers that they would try to get an agreement with the Crawford boys to quit the State quietly by November 15. Captain Perrin, Mr. Smith, and J. S. Stark, a dealer in the town, thereupon jumped into a machine and drove out to the Crawford place.

A solemn deliberative assembly was called in the court-house upon their return, attended by several hundred people. The three committee men reported that the Crawford boys were very polite and took off their hats as good "niggers" should; and that they agreed to abandon twenty thousand dollars worth of property and quit the State any time the white citizens of Abbeville requested it, altho they would prefer to stay in the home of their father and of their father's father. A revolver shot interrupted the words of the first speaker just as an expression of respect for their committee, the court house in which they were meeting, the sheriff there present, and deliberative assemblies in general. Cries of "Run 'em out

# Thirty-two years old and President of a million dollar corporation

## *The story of his success and how he achieved it*

Three years ago a studious-looking young man—he was twenty-nine then—came to New York City.

He had only a few dollars in his pocket. But his head was full of ideas and he knew business fundamentals. He entered the Pyrene Manufacturing Company as a salesman.

He did not stay a salesman long. He wanted to grow. Because he knew business principles, he did grow. In six months he was sales-manager. Then he was put in charge of advertising.

In 1916, the President of the Pyrene Company, a million dollar corporation, resigned. The Board of Directors elected the studious-looking young man President. He had been with the company less than two years.

### Why Mr. Allen made good

This is the story of C. Louis Allen's rise from no job to the Presidency of a huge corporation at the age of thirty-two.

"He knows the principles that underlie all big business," said the directors. That is why he is an executive today, while thousands of other thirty-two-year-old men are worrying over details in their own narrow departments.

It is this broad grasp of business that the Alexander Hamilton Institute will give you. It is giving a training in big business principles to more than 40,000 wide-awake men in America today.

### What Mr. Allen thinks of the Course

He says: "Several of our department and

branch managers are studying your Course at my suggestion. They are the men who are creating bigger jobs in this country and fitting themselves to fill them. From reading your Course, I am convinced that it will help every man who is filling his present job and reaching for another."

### The kind of men enrolled

Among the 40,000 subscribers are such men as: H. C. Osborn, President, American Multi-graph Sales Co.; Melville W. Mix, President of the Dodge Manufacturing Co.; George M. Verity, President of the American Rolling Mills; William H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales-Manager of the Ford Motor Co.—and scores of others equally prominent.

### Advisory Council

The Advisory Council includes Frank A. Vanderlip, President National City Bank; Judge Elbert H. Gary, head U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Joseph French Johnson, Dean New York University School of Commerce; and Jeremiah W. Jenks, statistician and economist.

### "Forging Ahead in Business"

An interesting 128-page book, "Forging Ahead in Business," will be sent to you free. It tells in detail what the Course and Service is, what it has done for others, and what it will do for you. Simply send the coupon below for your copy.

Frank Roberts, G. P. A.

Suite 1112

42 Broadway, New York

today," and "Lynch the black bastards," was all the applause the leading citizens received, according to the report of one who was present. At the end of the deliberations it was voted unanimously to order the immediate family of Anthony Crawford to wind up their business affairs and leave the State by November 15, 1916. A portion of those attending were not satisfied, and after the meeting proceeded to close up all of the negro establishments in Abbeville.

"Today's Sunday, Sam. Close up!" were their orders. "And we reckon every day'll be Sunday from now on."

Only one negro place remained open. Jack Perrin beat the gang to the blacksmith shop of Gus Roman. "You stay open, Gus," the clerk of the court said, "and I'll be here when they come to close you up." A mob has tremendous respect for courage.

On the way to the County Fair less than a fortnight, after this, a young countryman with whom I walked pointed out the tree where Crawford was hanged and advanced a reason for this outburst of fury which lynched so substantial a colored man on such slight provocation. "I reckon the crowd wouldn't have been so bloodthirsty," he said, "only it's been three years since they had any fun with the niggers, and it seems as tho they jest have to have a lynching every so often." The editor of one of South Carolina's leading journals stated a second:

"Crawford was worth around \$20,000 and that is more than most white farmers are worth down here. Property ownership always makes the negro more assertive, more independent, and the poor whites can't stand it. There is an element of jealousy that enters in whenever they see a 'nigger' forge ahead of them, and they lay for a chance to jump him."

What is going to be done about it? Article VI of the Constitution makes it difficult for South Carolina to avoid the issue. The answer depends largely upon the moral courage of Sheriff R. M. Burts. He is a well-to-do farmer living near Honea Path, the son of Rev. R. W. Burts, and was superintendent of the Sunday school of Broadmouth Baptist Church when the appointment to fill an unexpired term came from the governor unsolicited and unexpected, because of the family's high standing.

There are those in Abbeville who are outspoken in condemnation of his conduct on the days the mob ruled. The Abbeville jail is unusually well built; a single staircase leads to the cells on the second and third floors. Four men with Winchesters or shot guns could have held that jail for two weeks against the whole county, and militia could have been on the ground within a few hours. A sheriff in South Carolina has "power to call out the posse comitatus to his assistance whenever he is resisted, or has reasonable grounds to suspect that such assistance will be necessary." No Abbeville mob would have taken a prisoner from such men as Capt. J. L. Perrin, or Senator J. M. Nickles, or Hon. W. P. Greene, the son-in-law of the late Gen. R. R. Hemphill.

The press express its unqualified condemnation even earlier. The *Columbia State* pointed out that in view of the present exodus of negro labor to northern industrial fields and the demoralization of labor threatened by the boll weevil, now less than a hundred miles from the Savannah River counties, the problem of the land-owning farmers is to keep the black foundation of their wealth instead of serving notice on him that no matter how industrious, the negro's case is hopeless. The *Greenville News* recalls how Sheriff "Jim" White, of Spartanburg, some years ago drove back from the jail a mob assembled to lynch an innocent negro.

*The Greatest Treasure House  
of Linens in America  
McCutcheon's*

**S**IXTY YEARS of continuous growth and merchandising in Linens as a specialty have taught the Linen buying public to regard McCutcheon's as beyond doubt The Greatest Treasure House of Linens in America.

As you stand before our broad counters today, so far as abundant supplies are concerned, you will find it hard to realize that there has been the slightest difficulty in ocean transportation or any limitation in the supply of Linens as a result of the war in Europe.

Our stocks of Table Linens, Bed Linens, Towels, Fancy Linens of all kinds, Handkerchiefs, etc., are so varied and complete that our patrons need want for nothing in Linens.

Not only are our supplies abundant, but in accord with our usual custom we are showing many new designs in our various lines. In Table Linens, for example, a goodly number of the designs are being shown now for the first time.

Our great stock of Table Linens includes hundreds of different designs—perfectly plain Damask, stripes of every desirable size and variety, Scroll and Floral designs, etc. The opportunity of finding just what you want in Table Linens, as well as in all other household Linens, is almost unlimited.

**THE BOOK SUPPLY COMPANY, Publishers and Booksellers**  
E. W. REYNOLDS, President 231-233 West Monroe Street, CHICAGO

Illustration showing the biggest selling novel ever published, wrapped with special Christmas slip, cover in colors ready for Christmas giving—at all book stores.

"The whole country sounded his praise," says the editor, "reading in the incident an indication that South Carolina was beginning to restore and revere the majesty of the law. Abbeville has blotted that out with human blood. Where was Abbeville's 'Jim' White?" the *News* asks.

By a score of editorials of like tenor and by the conduct of the negroes, who came to the gin, received their \$100 a bale for cotton, and returned home without spending a cent, the white business men of Abbeville had it driven home to them that the time has come when the lynching of a negro may be expensive; that mobs in these days may lynch their own pocketbooks. And on November 6, at a meeting in the courthouse attended by practically every business man of the city, war was declared on those who had decided to run out the Crawford family on the 15th, in resolutions which decried lawlessness, pledged physical support to the officers of the law, suggested the formation of a local company of militia, assured the protection of the men at the meeting to all citizens regardless of condition or color, and called for a meeting of representatives of the law-abiding elements of the whole county for noon on Monday, November 13, two days before the Crawfords were to be expelled. The second peace conference differed on ways and means of maintaining law and order, but endorsed the resolutions of the first meeting and appointed a conciliation committee of twelve, two from Abbeville, two from the towns of the county other than Abbeville, and eight from the rural districts who shall "take up with the citizens the matters discussed in the meeting, and endeavor to bring about a proper understanding between the people of the county." The Crawfords were not expelled on the 15th.

One clause of the Abbeville resolutions is worthy of especial note: "Resolved further, That if it be necessary to carry out this determination, the aid of the State and Federal Government be called in order that every citizen may enjoy his rights under the Constitution." For citizens of South Carolina to suggest that Federal intervention be invited if necessary to insure his Constitutional rights to the negro is not usual. As the editor of the *Columbia State*, one of the most influential journals in the South, says:

"The action of the citizens of Abbeville makes plain that they are aroused. They do not intend to allow the law to be prostrated, with the result that industry will come to an end and property values be destroyed. If the choice be between mob law and Federal law, they will lay aside the traditional objections entertained by Southern men toward interference by Federal authority and welcome its assistance. Moreover, it is scarcely to be doubted that this is a condition of mind that is found among the people of other communities than Abbeville."

Perhaps Anthony Crawford has not died wholly in vain.

New York City

## For Sore Muscles

here is an antiseptic germicide liniment—one that is healing, cooling and soothing. Absorbine, Jr., is more than a germicide, more than a liniment—it is both. It means prompt relief from aches and pains; keeps little cuts and bruises from becoming more serious.

**Absorbine, Jr.**  
THE ANTISEPTIC LINIMENT

It is especially good for children's hurts because it is so harmless and safe to use—made of pure herbs and positively non-poisonous.

Use Absorbine, Jr., wherever a high-grade liniment or germicide is indicated. To reduce inflammatory conditions—sprains, wrenches, swollen veins or glands.

To reduce bursal enlargements—wens, weeping sinews.

To allay pain anywhere—its anodyne effect is prompt and lasting.

To heal cuts, bruises and sores.

Only a few drops required at an application.

\$1.00 a bottle at druggists or postpaid.

**A Liberal Trial Bottle**

will be sent you upon receipt of 10 cents in stamps.

W. F. YOUNG, P.D.F.

283 Temple St., Springfield, Mass.

## ANDIRONS

MARBLE, STONE and WOOD  
MANTELS

Wm. H. Jackson Company  
2 West 47th Street New York City

**LARGE** number of The Independent readers have grasped the opportunity recently given to subscribe for seven big numbers of The Countryside for One Dollar. If we could afford to send all the readers of

The Independent the Christmas number of The Countryside, we are sure thousands would subscribe at once. Just a look at the one hundred and twenty-five or more splendid illustrations is worth the low price indicated on the YES BLANK below—the regular price is Three Dollars per year. But you will also enjoy dozens of articles written by such contributors as:

MISS MARGARET WOODROW WILSON, daughter of the President of the United States, who writes about "Using the Schoolhouse"; GEORGE MADDEN MARTIN, the creator of Emmy Lou; W. H. TRUESDALE, president of the Lackawanna Railroad; GRAND SHOWERMAN, who reviews "The Country Chronicle"; WILLIAMS HAYNES; MRS. LESLIE HALL, who abandoned newspaper work and poultry for dogs; REV. HARRY EMERSON FOSDICK, of Union Theological Seminary; MARY SARGENT POTTER, daughter of Professor Sargent; CHARLES DEXTER ALLEN, author of "American Bookplates, Ex Libris—Essays of a Collector," etc.; ARTHUR TOMALIN, former editor of The Countryside; HUDSON MAXIM; JOYCE KILMER, associated with the N. Y. Times Review of Books, author of "Summer Love, Trees and Other Poems"; HAROLD HOWLAND, associate editor of The Independent and formerly contributing editor of The Countryside; CHURCHILL RIPLEY, one of the best informed experts on rugs in the country; MARY H. NORTHEED; JACK LONDON, author of "The Call of the Wild"; EDNA DEAN PROCTOR; J. HORACE McFARLAND, president of the American Civic Association; GEORGE W. CABLE, author of "Old Creole Days," and many other Southern books; JOHN CHAPMAN HILDER, motor editor of The Independent and until recently editor of Motor Life; KATHLEEN NORRIS, the author of "Mother"; STEWART EDWARD WHITE, author of "The Blazed Trail"; HARRIET SISON GILLESPIE, who describes A House on the Hudson with a Fine Pedigree; GUTZON BORGLUM, sculptor of "The Mares of Diomedes"; F. F. ROCKWELL, author of "Gardening Indoors and Under Glass"; WALTER PRICHARD EATON, one of the best known preachers of the outdoors; JOHN BURROUGHS, the Grand Old Man of the countryside; NORMAN HARSSELL, well known to Countryside readers; E. I. FARRINGTON, former editor of Suburban Life; MAX EASTMAN, editor of The Masses; JOSEPHINE DASKAM BACON, author of "The Imp and the Angel"; HAROLD D. EBERLEIN and ABBOTT McCLURE, experts on old furniture and joint authors of "Architecture of Colonial America"; HERMAN HAGEDORN, writer of plays and pageants; MAY IRWIN, beloved of theater-goers, and EDWARD F. BIGELOW, naturalist, writer and lecturer.

## A Glimpse of the January Number of The Countryside

The January number of The Countryside is devoted, first of all, to Winter Sports, but it contains an abundance of interesting material about houses, gardens, automobiles, interior decoration, rugs, furniture, chickens, and other phases of countryside living.

**A Brand New Game** to be played both indoors and out is described by its inventor exclusively for this number of The Countryside. Many striking pictures illustrate how this game is to be played, and since it bids fair to win wide popularity, Countryside readers will be especially interested in finding out what it is all about. It is something like tennis, and something like lacrosse, but more adaptable than either for countryside use.

**Herbert Reed**, who stands today as the foremost American writer on sports, tells of midwinter sport at the country clubs. Striking pictures accompany his article.

**For The Motorist** who hates to let his car stand idle or to use it only on the city streets, there is a suggestive article by Henry MacNair on Midwinter Motoring. Mr. MacNair was for four years editor of the Automobile News Book, and outlines in this article a group of attractive tours which can be made in winter.

**P. A. Vaile**, author of "Modern Golf" and "Modern Lawn Ten-

nis," an international authority on Winter Sports, takes occasion, in the course of a review of the new book "Golf for Women," to give some pointed and valuable advice to all women golfers who want to improve their game.

**Harold A. Caparn**, a former President of the American Society of Landscape Architects, contributes the introductory article of a most important series on the fundamentals of landscape design for the countryside home. These articles, which will appear in successive months, will state clearly the essential principles of landscape gardening as applied to the relation of house and grounds. They will be of great value to the man and woman who wish to make their suburban or town places distinctive and beautiful.

**Churchill Ripley** writes on Chinese rugs, reviewing briefly the history of these fascinating importations, and describing a number of the elements of design which make these textiles not only intrinsically beautiful, but symbolically interesting.

**Harold B. Eberlein** and **Abbott McClure**, whose article on mahogany last month began a series of articles on American cabinet woods and furniture, write this month on walnut, telling of its decline and fall into the horrors of mid-Victorianism and its reappearance in worthier forms today.

**January is the month for garden planning.** Jessie P. Frothingham in the article "Fireside Gardening," tells how to plan for the flowers and shrubs around the house. F. F. Rockwell, in "The Vegetable Yardstick," approaches the problem of the garden-patch from a new angle, and tells how to lay out a garden that will supply as much vegetable food as is wanted—and no more.

**J. Horace McFarland**, whose garden at Breeze Hill, Harrisburg, is already well known to garden lovers the country over, begins a beautifully illustrated series of article on "Getting Acquainted with the Flowers."

**Arthur Tomalin** continues his helpful page on the "Work for the Month." "The Work for January" has for illustration a quaint drawing which begins The Countryside Calendar.

**Zona Gale**, author of "The Friendship Village," writes on "The Club-house of the People," showing how even the schoolhouse in the small town can be adapted to many community uses, and may be made the center of a helpful and vigorous community life.

**Liberty H. Bailey** is one of the outstanding figures of the American countryside. A fine portrait and sympathetic appreciation of his work appear in this issue. There will also be house plans and pictures, including photographs of the home of Vance McCormick—the man who put Woodrow Wilson in the White House again, and several pages of attractive things to be found in the shops.

**The Motor Editor** of The Countryside inaugurates a monthly department, with a pointed and helpful article on "Cutting Car Costs."

**YES BLANK** for THE COUNTRYSIDE  
119 West 40th St., New York

(either enclose or will shortly send)

**ONE DOLLAR**

for which please forward the Christmas Number of The Countryside, with the Christmas Card, and the Six Monthly Issues beginning with January, 1917.

# THE NEW BOOKS

## THE SYRIAN CHRIST

The striking contrasts in Oriental and Western types of thought and expression have often proved grave obstacles to our understanding of the Hebrew and Christian scriptures. It is to overcome some of these difficulties and to illumine from a new angle the life and teachings of Jesus that Mr. Rihbany has written *The Syrian Christ*. The author's birth and early training, in Oriental surroundings little changed since the days of Jesus, and his thoro schooling for the last twenty-five years in American life and progressive Western thought specially qualify him to interpret the biblical atmosphere and customs in terms that appeal to the American mind. We must not forget that Jesus Christ was a Syrian peasant and that his message comes to us in an Oriental garb. As Mr. Rihbany puts it, "The gold of the Gospel carries with it the sand and dust of its original home." Many have been unable to separate the precious metal from its worthless accompaniments. Sometimes the sand and dust have become the subject of strife and the shining gold has escaped notice.

The vivid, almost flashy and fantastic imagery of Eastern language, and the parabolic form of presenting truth have often been regarded as expressions of scientific accuracy, the naive narrations as historical statements. A conflict between religious authority and scientific knowledge has not infrequently arisen from such misunderstandings. Mr. Rihbany's delightful discourses on the customs of the common folk of Syria, drawn in part from his own early experience, and illumined by his wealth of historical and literary knowledge, will give the reader a sympathetic understanding of biblical incidents and teachings. The author does not write a story of Jesus' life, but rather makes clearer many of its episodes and much of the Master's teachings.

*The Syrian Christ*, by Abraham Mitrie Rihbany. Houghton, Mifflin Company. \$1.50.

## ENGLISH COUNTRY FOLK

The scope and devastation of the war in Europe are as nothing in comparison with its ruthless advance on the pages of fiction. Militarism in stories is becoming uniform and it is more often the case than not that the author resorts to unfeeling conscription to get the war incidents into his plot. So it is a "find," and a very pleasant one, to come upon two excellent novels, wholesome stories of English country folk concerned with problems of normal living in the good old days before August, 1914.

Aside from their appeal to the war-jaded, both stories are well worth reading. *Watermeads*, by Archibald Marshall, is a leisurely tale of a big, happy-go-lucky family too poor to keep up their comfortable estate and too easy going to decide to leave it. Mr.

Marshall's manner of narrative is as detailed as the actual happenings, but far more entertaining.

*These Lynnekers* deserves rather more serious consideration. Its circumstances and setting are similar to *Watermeads*, but the plot is more carefully worked out and the characters more convincing. J. D. Beresford has already won a reputation among the younger English realists by his Jacob Stahl trilogy. His study of Dick Lynneker, developed from adolescence thru manhood, is an equally notable achievement. But don't be mislead by these affirmations of its psychological value. *These Lynnekers* is likewise a delightfully entertaining story.

*Watermeads*, by Archibald Marshall. Dodd, Mead & Co. \$1.50. *These Lynnekers*, by J. D. Beresford. George H. Doran Co. \$1.50.

## A LONG TRAIL

The life of Dr. Charles A. Eastman, an Indian of the Sioux tribe and a nephew of the noted Sitting Bull, reads like a romance in the realm of culture. Until he was fifteen years of age, Ohiyesa made his home in the Canadian wilderness among the scattered remnants of his tribesmen. An earlier book, "Indian Boyhood," describes these surroundings. He has now written the story of his struggles and triumphs, his hesitations and regrets in passing *From the Deep Woods to Civilization*. In response to his father's earnest plea he forsook the alluring life of a hunter and warrior and started his long and difficult journey on "the way of the white man." At almost every step he records his doubts and misgivings and his determined attempts to see in the new manner of life ideals worthy to replace the old. When he left his

father's home in Dakota, and journeyed on foot more than one hundred and fifty miles to the Indian school at the Santee agency, he was accompanied part way by a neighboring tribesman. When his companion turned back Ohiyesa said, "Tell my father that I shall not return until I finish my war path." Sixteen years later, after studies in Santee and the fitting schools at Beloit and Knox Colleges and at Kimball Academy, as a graduate of Dartmouth College and the Boston University School of Medicine, he returned to his own people. Ohiyesa's war path was ended, and Dr. Eastman had begun his distinguished career in helping the two antagonistic races to a better understanding of each other. On the lecture platform, with his pen, and by personal service, he is breaking down prejudices and destroying old enmities. This new book is not only a good story delightfully told, but as interpretation of Indian ideals and a revelation of the deep unity and fundamental likeness of the various branches of our common humanity.

*From the Deep Woods to Civilization*, by C. A. Eastman. Boston, Little, Brown & Co. \$2.

## PICTURE BOOKS

*Seven Maids of Far Cathay, Being English Notes from a Chinese Class Book*, is the result of a quaint game in the study of English in the Woman's Anglo-Chinese College of Neuchang. Artist, Biographer, Correspondent, Diarist, Essayist, Folklorist, and Genius (in alphabetical order), each contributes her bit. Chinese attitudes towards life, the "Able Mother-in-Law," fidelity, love, American customs, the beautiful green and blue universe—all make a jumble, quaintly humorous, and poetic. The Folklorist is especially charming, the Genius especially jocular. Enlightening as well as entertaining, a book, maybe, to re-read, the little volume is artistically as pretty as a Christmas tree.

*The Mysterious Stranger*, the strange, ironic, bewildering, but beautifully written wonder tale found among Mark Twain's papers, should by right have Meryon's gargoyle of Notre Dame for its cover design. However, its holiday quarto form is an attractive bit of book making, and the pictures in color by N. C. Wyeth are all charming, while that of the astrologer is uncommonly rich and decorative color work.

Frank Dadd has made a set of most satisfactory pictures, mostly in black and white, for *Old Christmas*. Washington Irving's Christmas essays. The illustrations are drawn with sympathy and humor, and without exaggeration. There are decorations for the chapter headings, and three colored plates. A fine Christmas card.

Edmund Gosse writes an essay for *The Allies' Fairy Book*, introducing the

OHIYESA—DR. EASTMAN

As lecturer, author and educator he is showing the Indians the way "from the Deep Woods to Civilization."

folk tales of eight nations. The book went to press before Rumania joined the war. But there are more than eight tales, for Japan gives three, Scotland, Ireland and Wales one each. In the illustrations, a dozen color plates and head and tail pieces, Arthur Rackham is as whimsical, as full of charm, and as masterly in color as ever. It is a delightful book, whether one believes in fairies or not.

*Seven Maids of Far Cathay*, compiled by Bing Ding. San Francisco. Paul Elder, \$1.25. *The Mysterious Stranger*, by Mark Twain. Harper & Brothers. \$2. *Old Christmas*, by Washington Irving. G. P. Putnam's Sons. \$2.50. *The Allies' Fairy Book*. Philadelphia. J. B. Lippincott Company. \$1.75.

#### A CHILDREN'S BOOKSHELF

*The David Stories*, by E. C. Cram, picture a boy on a New England farm early in the last century. They are vivid, faithful, interesting records of the rough, honest, rugged life. (Boston: The Pilgrim Press, 50 cents.)

For any small person whose holidays must be spent in bed, *The Clever Mouse*, with six stories for the six days, in six delightfully and drolly illustrated folders, is the best of Christmas cards. (San Francisco: Paul Elder & Co.)

*Treasure Flower*, by Ruth Gaines, is a pretty tale of a little Japanese girl. It is illustrated by truly Japanese pictures, in colors and in black and white, and is a welcome addition to the Little Schoolmate Series. (E. P. Dutton & Co., \$1.25.)

Edwin C. Burritt can write an adventure yarn that is not made from impossible accidents happening to more impossible people. *The Boy Scout Crusoes* is so interesting that it has not had to be garbed in a jargon of unrecognizable English to make it vivid. (F. H. Revell & Co., \$1.25.)

There is a Korean tale of a cat and a dog and a kettle of rice in *Wonder Tales Retold*, written and illustrated by Katherine Pyle. Also there are Norse trolls and pixies, there is the Good Genius from the Indians of our West. These are unfamiliar and very varied stories charmingly told. (Boston: Little, Brown & Co., \$1.35.)

An anthology for dog lovers, *The Dog's Book of Verse* is compiled by J. Earl Clauson. It has the old and famous tributes to dogs, Cowper's, Byron's, Watson's, and despite the elegiac tendency of verse to pets, there is much cheerful reading in the volume. (Boston: Small, Maynard & Co., \$1.)

Elizabeth V. Quinn and Rose O'Neill have, between their text and drawings and music, made a very funny and very attractive *Keupie Primer*. The "note to the teacher" is the only suggestion of school book, and no teacher except the Keupies is needed, anyway. (F. A. Stokes Company, 50 cents.)

All about an invention—except the idea itself, and the possible failure—is treated in *Inventing for Boys*, by A. F. Collins. Chapters on the design, "state of the art," models, patenting, with descriptions of the great inventions, make a fascinating book for a boy mechanically apt. (F. A. Stokes Company, \$1.35.)

In the wording of the King James version, the with wise omissions, Francis Jenkins Olcott has arranged a hundred and fifty Old Testament stories. The color plates by Willy Pogany happily give due attention to setting of time and place, while not emphasizing features that to the child's eye are merely outlandish and comic. (Houghton, Mifflin Company, \$2.)

A happy thought it was that led Edith Laurion Forbes to the gathering of *Forerunners of a Nursery Seventy Years Ago*. With its reproductions of delightful old woodcuts there will be a book for any nursery today, while the grown folk will turn the pleasant pages lingering over half forgotten lines and greeting pictures long

By the author of "The Salamander"

## THE WOMAN GIVES

By OWEN JOHNSON

New York's Bohemian life—a story of the regeneration of a man.

"The Woman Gives" answers all the requirements of an original story of life in the American metropolis. . . . There is power, veracity and a certain grim fatality in the novelist's method. — *Philadelphia North American*.

Illustrated by Christy. \$1.40 net

## Could You Fill His Shoes?

Suppose a good job were open where you work. Could you fill it? Could you jump right in and make good? Or would the boss have to pass you up because you lacked *training*?

Don't take chances on being promoted. If you want a job that pays good money, get ready for it.

Pick out the job you want in the work you like best. Then start *right now* to get, through the International Correspondence Schools, the *training* that will prepare you to hold it.

Thousands of men have advanced through I. C. S. training to the very jobs they wanted. What these men have done you can do. All the I. C. S. asks is the chance to help you. No matter where you live, the I. C. S. will come to you and train you in your spare time.

The job you want is within your reach. I. C. S. training will win it for you. The thing to do now is to make your start. Here's the coupon—mark and mail it now.

I. C. S., Box 4532, Scranton, Pa.

since familiar. (Houghton, Mifflin Company, \$2.)

The art series for young people, by Charles L. Barstow, "Famous Pictures," "Famous Buildings," has a third volume, just out, *Famous Sculpture*. This is an attractively printed, clear and most readable little book. It does not pretend to thoroughness. What it does undertake is to give accounts of the best known statues and carvings of ancient and modern times, thus serving as introduction, and as basis for appreciation. (The Century Company, \$1.)

A thoughtful and attractive selection, the *Cambridge Book of Poetry for Children* has been made by Kenneth Grahame, who does certainly know children. Not a large book, it has good variety. There are the old favorites from Wyndham, Blyden and Nod to Byron's *Senacharib*, and many less known, as *Thorbury's Riding to the Tournament*. Its English genesis is oddly shown in the inclusion of *Sheridan's Ride* and the omission of *Paul Revere's*, altho *Longfellow* is the most quoted American in the collection. (G. P. Putnam's Sons, \$1.50.)

### GIVE ME A STORY

One day E. V. Lucas turned out his trinket box and found some precious war souvenirs, a rare Australian nugget, prest flowers, bits of fur and feathers, an old trout fly, etc. Nothing of value, perhaps, until, transmuted by his magic into striking sketches, whimsical fables and delightful dissertations, they become something you cannot afford to miss, a book called *Cloud and Silver*. (G. H. Doran Company, \$1.25.)

A *Country Chronicle*, by Grant Showerman, is a small boy's sober account of the wholesome farm life that surrounds him. With a boy's candor and matter-of-fact literalness and keen and accurate observation, the author reveals country life as he has known it, with its durable homespun virtues, its awkward simplicities. The story is chiefly remarkable for a perfection of minute detail which results in verisimilitude of presentation. (The Century Company, \$1.50.)

Our *Natupski Neighbors*, by Edith Minster, is not ordinary fiction manufactured on a typewriter. It is more like biography—the true life story of the Natupskis, a family of Polish immigrants who live on terms of intimacy with their chickens and pigs. This account of their progress in decency and Americanism is a human document that readers will not soon forget. (Henry Holt & Co., \$1.35.)

*The Incredible Honeymoon*, by E. Nesbit, is an account of an elopement. The young people are incredibly charming, fall in love with incredible rapidity, escape their elders with incredible ease. Everything which would be likely to go wrong in real life goes right, which makes this a somewhat incredible story. (Harper & Brothers, \$1.)

J. J. Bell's new book, *Cupid in Oilskins*, is an engaging account of the romance of a gunner in the English navy who has been told that he must sink a U-boat to win a certain Lydia with a "lovely pigtail." The author of "Wee Macgregor" touches the war theme very lightly, and the real interest of this little volume is to be found in the personalities of the hero and his friends. (F. H. Revell & Co., \$1.)

*Fibble, D. D.*, by Irvin S. Cobb, is a caricature of the curate of the stage, of comedies that make humor of types—not of individuals. The drawing of Fibble exaggerates his type and he is involved, arbitrarily, in situations in which no living Fibble would ever have involved himself. But the book is funny, with the dry humor best calculated to tickle the fancy of the average American. (G. H. Doran Company, \$1.20.)

Sir Hugh Clifford's life among the people of the Malay Peninsula has made it possible for him to write with great sympathy of a civilization which, he says,

American School of Correspondence, Dept. P-2489 Chicago, U. S. A.

is "an almost exact counterpart of the feudal kingdoms of medieval Europe." The zest with which we read the tales of *The Further Side of Silence* is due in part to the new flavor that the Malay Peninsula gives fiction, and in part to their unusual narrative power. (Doubleday, Page & Co., \$1.35.)

*The Range Boss*, by Charles Alden Seltzer, smacks reminiscently of "The Virginian," tho its Wild West is even wilder, its "bad men" more rampant, and its killings more casual than those of its prototype. A fairly entertaining love story, with a heavy and unconvincingly repentant villain. (Chicago: A. C. McClurg & Co., \$1.30.)

*Somewhere in Red Gap*, by Harry Leon Wilson. Variegated experiences of the woman owner of a Western cattle ranch, told to an obliging guest in an inferior Mr. Dooley style, with occasional flashes of genuine humor and shrewd insight into human nature. (Doubleday, Page & Co., \$1.35.)

The theme of *The Six-Pointed Cross in the Dust*, by John Roland—the old and wonderful story of the adventures of a vagabond knight errant—is rich in possibilities. But the adventures are manufactured—never really happened; and the whole tale lacks the breath of true romance. (F. A. Stokes Company, \$1.30.)

Just for the baseball wise are the amusing letters of *You Know Me, Al*, written with unbelievable frequency and detail by a "busher," R. W. Lardner, to his long suffering pal. (G. H. Doran Company, \$1.25.)

### JUST FOR CHRISTMAS

The story written for Christmas that escapes being either commonplace or sentimental is rare, and Ruth Sawyer's *This Way to Christmas* does escape. It manages to weave folk tales from half a dozen lands in with a simple, merry story of a snow-bound hill country, and both grown folk and children will enjoy it. (Harper & Brothers, \$1.)

Christmas in Russia and in the Scandinavian countries, and Yule as it was celebrated before it became the Christian festival, are some of the chapters in *Yuletide in Many Lands*, by M. P. Pringle and C. A. Urann. (Boston: Lothrop, Lee & Shepard, \$1.)

Christmas Eve in Mentone with a Belgian refugee family and a millionaire American has fairy-tale possibilities not disappointed, by C. N. & A. M. Williamson in *Angels Unaware*. (Harper & Brothers, 50 cents.)

Kate Douglas Wiggin—or her publishers—decided that she should write a Christmas story. So she wrote *The Romance of a Christmas Card*, with not a bad idea for a starter, and now and then a reminder of her light charm, but by no means on every page. (Houghton, Mifflin Company, \$1.)

And *Thus He Came*, the Lord, to rich and poor, to gay and sorrowing, to saint and sinner. In many forms He came, but only to those who could see. Such is Cyrus Townsend Brady's "Christmas fantasy," rather his Christmas vision. (G. P. Putnam's Sons, \$1.)

*When the Blind Saw* is Dr. Burrell's story of a little blind beggar of Palestine, who one winter night saw the glory of a star, and thirty years afterward found his sight when told to go "wash in the Pool of Siloam." (New York: Am. Tract Society, 75 cents.)

An interpretation of the three *Gifts from the Desert*, gold, frankincense, and myrrh, by F. B. Fisher, is this year's Christmas booklet illustrated by Harold Speakman. (Abingdon Press, 50 cents.)

Caspar, one of the Magi, who here becomes the Wandering Jew, tells *The Wise Man's Story*. This is an uncommonly satisfactory retelling of the story of Christ's nativity by A. E. Bailey with many half-tone illustrations. (Boston: The Pilgrim Press, 75 cents.)

## Loyal to the Service

### They Uphold Each Other's Hands

The public *must* be served. This is the dominating thought of the entire Bell organization from the president down. Every employe feels the sense of responsibility that this working principle implies. The public must be served—efficiently, uninterruptedly.

In the fulfilment of this policy, the management of the Bell System realizes that every individual employe must give undivided and undistracted effort and interest to his work.

To assure this, every worker receives adequate remuneration, ample protection in case of illness and provision for old age. All these personal matters are cared for so that the employe has the least possi-

ble worry regarding his own welfare. His whole-hearted attention can be devoted to serving the public.

While each employe realizes that he is but a single factor, he understands that not only is supreme personal effort expected of him, but also a loyal support to every other telephone worker.

There is something in the telephone organization which imbues every employe with a spirit of loyalty to the public. All feel a direct responsibility for each other because each recognizes that only by mutual endeavor can they render the high standard of service which is expected of them. They uphold each other's hands so that the public may be served.

## "Headaches—How Prevented"

What is more exhausting than headache? Yet—a headache is "only a symptom." It is in the conditions back of headaches, the conditions by which headaches are caused—that the real danger lies. High blood pressure, auto-intoxication, eye strain and worse disorders cause headaches. To be rid of headaches, you must get at their cause. How to do this is explained in a new book, "Headaches and How to Prevent Them"—by Dr. W. H. Puley, a Neurologist, a man who has had years of experience in treating all kinds of headaches. You may get relief by following the teachings of the book. No drugs. Only natural means—diet, exercise, rest, and sleep. We send this book for your FREE examination. All you do is ask for it. (See the coupon.) If not satisfied with the book, return it at our expense. Your examination costs you not a penny. If you keep the book, you remit only \$1.25. Not a large book, but—worth its weight in gold to the headache sufferer.

# The Market Place

## STOCKS AND DIVIDENDS

During the week that ended on November 25 the upward movement which had been shown by transactions on the New York Stock Exchange in the second half of the preceding week was checked, and at the close of business on the 25th there was a net average loss for the six days. Some of the war order shares had advanced; others had declined. Railroad stocks had been heavy, owing to doubt concerning the result of legal proceedings related to the eight-hour law. Railroad price changes were slight, however, as support had been given by very favorable reports of earnings.

On the following Monday, the 27th, the market moved downward again. Published warnings that German submarines were preparing to attack ships near our coast caused uneasiness, and the decline of wheat prices at Chicago (due to reports that proposals for an embargo had strong support at Washington) exerted a depressing influence. But railroad shares were firmly held. Confusion and uncertainty characterized the course of the market on Tuesday. Some thought the warning of the Federal Reserve Board concerning the investment of bank funds in British Exchequer bills might unfavorably affect the trade in munitions. The rate for call loans rose to 6 per cent. At the close of the day the quotations showed an average net loss of more than one point. On Wednesday there was a slight recovery. Railroad stocks were notably strong on Friday, the day after Thanksgiving, partly on expectation that the forthcoming message of the President would make recommendations satisfactory to the companies. Additional reports of earnings, while they showed considerable increases of gross receipts over those of one year ago, pointed to declines of net earnings which indicated the greater cost of transportation. During each of the week's full days more than 1,000,000 shares were sold.

In the month of November, transactions on the Exchange amounted to 34,506,981 shares, a number equaled in no preceding November. The business in the corresponding month one year ago was only 17,560,000 shares. In no one of the month's twenty full days were the sales less than 1,000,000, and there were two days when they exceeded 2,000,000.

Prices were affected to some extent by a remarkable list of dividend announcements, showing extra allow-

## What 15c WILL BRING YOU FROM THE Nation's Capital

The little matter of 15c in stamps or coin will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth, now in its 23d year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send it on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address The Pathfinder, Box 39, Washington, D. C.

The germs are killed by a chemical process in water in the container, which you empty once a month. Absolutely no odor. No more trouble to empty than ashes. Closet absolutely guaranteed. Write for full description and price.

ROWE SANITARY MFG CO., 12108 ROWE BLDG., DETROIT, MICH.  
Ask about the Row-San Washstand—Hot and Cold Running Water Without Plumbing

ances. The Du Pont Powder Company gave 24½ per cent extra, in addition to its regular quarterly payment, making 100 per cent for the full year. Another powder company, the Atlas, added 8 per cent to its quarterly of 2 per cent. The New York Air Brake Company's extra of 12½ per cent was explained by the statement that net earnings for ten months had exceeded \$8,000,000. Additions made by copper mining companies were as follows: Quincy, quarterly increased from \$4 to \$5; Allouez, from \$2.50 to \$3; Calumet and Arizona, 1 per cent extra. Lackawanna Steel gave an extra of 3 per cent; Central Leather one of \$2, and Parke, Davis & Co. one of 4 per cent. Initial dividends were announced by the Steel Company of Canada and the Atlantic, Gulf and West Indies Steamship Company. The Atlantic Coast Line restored its old 7 per cent rate, and dividend payments were resumed by two or three companies whose stockholders had received nothing for some time past.

#### LOANS AND CREDITS

New loans to foreign borrowers include \$2,400,000 to Bolivia; \$5,500,000 to the city of Sao Paulo, in Brazil, and \$20,000,000 to each of the three French cities of Bordeaux, Lyons and Marseilles. These cities, with an aggregate population of about 1,400,000, have debts amounting to only \$50,000,000. There are also recent bank credits of \$30,000,000, one of which, for \$5,000,000, is for the benefit of one of the French railway companies, which has been paying 11 per cent dividends on a capital of \$80,000,000.

When it was proposed a few days ago that banks and investors here should buy British or French Treasury notes or Exchequer bills, the Federal Reserve Board published its objections, with what was regarded as a warning to member banks of the Federal Reserve System. These, the Board said, ought not to tie up their liquid funds in obligations of this kind which might have to be renewed several times, thus becoming long-term securities. This caused some surprise in London, where the opinion was expressed that so good a customer as the British Government might reasonably expect all possible accommodation here. The objections proved to be effective, for on December 1 J. P. Morgan & Co. gave notice that the plan for selling such notes had been withdrawn at the request of the British and French governments, which desired to "show every regard" for the Reserve Board.

#### WAGES INCREASED

In the closing weeks of the year there have been many increases of wages, suggested by the high cost of living and the large profits of manufacturers. Those which especially attracted attention at the beginning of the movement were the addition of 10 per cent, or \$28,000,000 a year, to the wages of the Steel Corporation's 260,000 employees (making an increase of 22 per cent since January), and the

similar addition to the pay of 35,000 cotton mill workers in New Bedford. Other steel companies and cotton manufacturers have since followed these examples. The list includes those named below:

Steel Corporation; other steel companies; cotton manufacturers in New Bedford, Fall River, Manchester, Lowell, Lawrence, Adams and Augusta, Georgia; six worsted mills in New Jersey; The American Woolen Company; seven woolen mills in the vicinity of Pittsfield, Massachusetts, and one in Worcester; the Standard Oil Company of New Jersey; the Toledo Plate Glass Company; several shoe factories in Massachusetts; The United States Envelope Company, twelve factories; the National and United States Rubber Companies; the American Thread Company.

As a rule the addition is 10 per cent. It is estimated that the increases for textile workers in New England since January amount to \$10,000,000 a year. In New York the Consolidated Gas Company has undertaken to give to its 17,000 employees a quarterly dividend on wages which is equal in percentage to the dividend received by stockholders. The company's dividend rate is 7 per cent, and the workmen's annual pay will be increased by about \$1,000,000.

### RISING METAL PRICES

In the steel market prices are advancing every week, and almost every day, because of the great demand both at home and abroad. Our railroad companies in the first three weeks of November gave orders for \$75,000,000 worth of steel products, 35,000 cars included. The price of cars is nearly 100 per cent higher than it was before the war. Orders are for about 50 per cent more this year than were sold in 1915, and for locomotives there has been a greater increase, but the companies must wait a long time for delivery. Relief for the car shortage, as to which there is so much complaint, must be delayed. One car order recently placed calls for delivery in November, 1917. Russia ordered 1000 cars last week, England wants 135,000 tons of rails and Russia 33,000. The demand for ship plates cannot be satisfied. Foreign shipbuilders are now trying to buy 100,000 tons, and a large quantity is needed in American shipyards. Altho the output of pig iron was never before so large, the increase during ten months of the present year having been about 40 per cent, price additions are reported every few days. Bessemer pig, \$22 a few months ago, is now selling at \$35. France and Italy recently bought 100,000 tons.

The greatest transactions, however, relate to steel bars which are used in making shells. In the last few weeks the Allies have bought 1,500,000 tons, for delivery in the second half of 1917, paying about \$80. A short time ago the price was \$60. Official reports show the remarkable growth of our exports of steel products. In the nine months that ended with September they amounted to \$619,853,000, against \$215,000,000 and \$152,000,000 in the corresponding months of 1915 and 1914. September, with \$90,895,000, made a new high monthly record.

### DIVIDENDS

#### THE CRESSON CONSOLIDATED GOLD MINING AND MILLING COMPANY.

Dividend No. 50.

Amount, \$305,000.00. Total amount to date, \$4,221,162.50.

Notice is hereby given that the monthly dividend of ten (10) cents per share has been declared upon all outstanding stock of The Cresson Consolidated Gold Mining and Milling Company.

Also an extra dividend of fifteen (15) cents per share has been declared upon all outstanding stock of The Cresson Consolidated Gold Mining and Milling Company.

Both dividends payable December 10, 1916, to stockholders of record November 29, 1916.

By order of the Board of Directors.

ADOLPH F. ZANG, Secretary.

#### UNITED STATES STEAMSHIP COMPANY.

New York November 28, 1916.

At a Board of Directors meeting held this day, a regular dividend of one per cent, was declared on the capital stock of this Company, payable December 30, 1916, to stockholders of record at the close of business on December 16, 1916.

N. H. CAMPBELL, Treasurer.

#### BROOKLYN RAPID TRANSIT COMPANY.

New York, November 27, 1916.

The Board of Directors has this day declared a quarterly dividend of one and one-half per centum (1½%) on the outstanding capital stock of this Company, payable on January 1, 1917, to stockholders of record at the close of business on Saturday, December 9, 1916.

J. H. BENNINGTON, Secretary.

#### LIGGETT & MYERS TOBACCO COMPANY

St. Louis, Mo., November 29, 1916.

A dividend of One and Three-fourths Per Cent (1¾%) has been declared upon the Preferred Stock of Liggett & Myers Tobacco Company, payable January 1, 1917, to stockholders of record at the close of business December 15, 1916. Checks will be mailed.

T. T. ANDERSON, Treasurer.

by the World's  
Great Food and  
Health Scientists

The Natural Food for Stomach and Bowels  
Keeps Them in Perfect Condition.

By Mail, 1 Jar \$1. 4 Jars \$3.50. Circular on request.  
STEWART FOOD CO., 571 Security Bldg., Chicago

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

## Choice Xmas Pecans

**Fresh, Wild Grown, Full  
Meated, Exquisite Flavor**

Fine new crop of  
Wabash Valley  
Pecans now ready.  
Thin shelled easily  
cracked—appetizing  
healthful. We ship  
direct to consumers in 10,  
15 and 20 lb. cartons at  
30c per pound, express pre-  
paid east of Missouri River.

Also Wild Hickory Nuts, Walnuts and Shell Barks.  
Order Ten Pound Trial Carton Pecans today, \$2.50  
satisfaction guaranteed.

**Southern Indiana Pecan Co.** 238 3rd Street  
Mt. Vernon, Ind.

# Insurance

Conducted by

W. E. UNDERWOOD

## PENSION MUTUAL LIFE

As a number of inquiries have been received by this department during the recent past about the management and financial condition of the Pension Mutual Life Insurance Company of Pittsburgh, Pennsylvania, it is important to note that the Insurance Department of that state has ordered the company to cease business. An examination of the company by the Department discloses a deficit of \$1,198,422.60. The assets are found to be \$404,269.17; the liabilities, \$1,502,691.77.

An examination made two years ago showed the company sound financially, it is said; but we are informed now that the capital of \$849,195 is largely in stockholders' notes, as yet unpaid. The Department accountants, who have just completed their examination, report that bonds of approximately \$971,000 have disappeared, the only explanation vouchsafed being the statement of the company's secretary to the effect that they had been returned to H. L. Doherty & Co., bankers, New York. No receipt for them was shown. The management objected to the examination and at first refused to permit it.

A number of letter carriers and mail clerks, members of the Post Office Protective Association, hold policies in the company, the total sum being stated at \$1,034,000.

The Attorney-General has applied for a receiver, answer to which must be made within ten days. If the facts revealed by the Insurance Department are confirmed, the company will be placed in the custody of a special deputy and the business wound up.

The people connected with this company are promoters of the Consolidated Investment Company, the object of which is to acquire and consolidate a number of young and small life companies. The thing resembles an excursion into the realms of high finance.

B. A. T. Kenton, O. (1) The New York law limits the amount of new insurance a life company may write annually for the purpose of covering the initial expense within prescribed boundaries. (2) According to "Fitch's Compend" the net cost of \$1000, twenty-payment life, age twenty-five, during the five years ending December 31, 1915, for the companies named was: Fidelity, \$132.78; Mutual Life, \$129.81; New York Life, \$135.75; Metropolitan, \$115.99; Prudential, \$121.39; Northwestern Mutual, \$126; Mutual Benefit, \$121.94. (3) The mutualization of the Prudential places the control and all the profits of the company in the hands of the policyholders and removes the menace, inherent in the action, arising out of the exploitation of the funds by stockholders. (4) It would seem wise in a young man with a dependent wife to select that one of the three options offered under a maturing policy which provides paid-up insurance.

## REORGANIZATION

OF

## The Missouri Pacific Railway Company

AND

## St. Louis, Iron Mountain and Southern Railway Company

NOTICE THAT PLAN AND AGREEMENT OF REORGANIZATION HAVE BEEN DECLARED OPERATIVE, AND OF OPPORTUNITY FOR FURTHER DEPOSITS OF SECURITIES

To Holders of Certificates of Deposit issued under the Plan and Agreement of Readjustment or modified Plan and Agreement of Reorganization of said Railway Companies, and Holders of Certificates of Deposit issued by Depositaries for Committees which have approved said modified Plan and Agreement, and

To Holders of Undeposited Bonds, Stock and Claims for which Provision is made by said Plan:

NOTICE IS HEREBY GIVEN that the undersigned Kuhn, Loeb & Co., as Reorganization Managers under the Plan and Agreement of Reorganization, as modified July 25, 1916, of The Missouri Pacific Railway Company and St. Louis, Iron Mountain and Southern Railway Company (being the Plan and Agreement of Readjustment of the Capital and Debt of said Companies dated July 1, 1915, as modified July 25, 1916) have declared said Plan and Agreement, as so modified, operative as to all classes of securities for which provision is made therein.

Further deposits of bonds, shares of stock and claims, of all classes for which provision is made in the Plan, may be made on or before January 5, 1917, after which date no deposits will be accepted except on such terms as the Reorganization Managers may prescribe. Such deposits may be made either with Depositaries or Sub-Depositaries for the Reorganization Managers and Committees constituted by the Agreement of Reorganization, or with Depositaries for the Committees which have approved the modified Plan and the respective offers made thereunder.

Elections permitted by the modified Plan or by the offers made thereunder may be made, by Depositors with any of the Depositaries or Sub-Depositaries above mentioned, by presenting their certificates of deposit for appropriate stamping on or before January 5, 1917, after which date no such Depositor shall be entitled to make any such election.

Dated New York, November 28, 1916.

KUHN, LOEB & CO.

Reorganization Managers.

# A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

THE late Dr. William Hayes Ward often expressed regret that his editorial duties on *The Independent* and his outside activities did not leave him time for his great delight, the writing of poetry. Once in his busy life he did have leisure and he improved it. This was in 1888 when he was laid up in the hospital. Hurrying one morning, as he always did hurry, to catch a Barclay street ferry on his way from his home in Newark to the office of *The Independent* he slipped and fell in front of a truck and was crushed under the wheels. At the hospital it was found that four ribs were broken and that it was necessary to remove one of his eyes.

But his spirit never failed him, and while he lay in the Chambers street hospital bandaged and blinded, he composed and dictated his longest poem, "An Invocation to the Muse of Verse," published in *The Independent* of May 10, 1888. As we should expect under the circumstances it is in style reminiscent of his favorite poet, the blind Milton, but in theme it is very modern, in fact it is in some respects more applicable to the present than to the time when it was written.

Considered merely as a feat of memory, the poem is remarkable, for it runs over five hundred lines and reviews the history of poetry from the days of the ancient monarchies of Egypt and Babylon down thru Greece and Rome, Italy and France, to England and America. Like Bishop Berkeley, he then calls upon the Muse to leave old Europe for a new world. The passage on the state of Europe I must quote because of its curious resemblances and still more curious differences to the present. Then, as now, Macedonia was the center of disturbance. The Greeks and the Montenegrins were then fighting the Serbs and Turks. France, Germany and Russia combined were trying to drive Ferdinand from the throne of Bulgaria, and England, Italy and Austria were supporting him, strange triple alliances they seem to us now! France was being urged to war against Germany by General Boulanger and England was threatening to fight Russia in defense of Bulgaria and Turkey:

Hear'st thou the thunder rumbling in the East?  
Seest thou a million Cossacks hid behind Silesian ramparts, and a million more Waiting to leap the Balkans? Roses red, Mile upon mile, scent thy free, virgin air Bulgaria; but rarer and more sweet The freedom pulsing in thy young, red blood  
Than the distillment of the rose leaves plucked  
Ere sunrise, in thy gardens, by the maids! But maids and roses and thy gallant sons Wait the dread Russian. Austria's million men  
Guard the frontier, and Humbert arms his fleet.  
And while the Pfarrer reads the Ninetieth Psalm  
Over the corpse of the gray Emperor,

Bismarck leans, listening for the word of war,  
And Germany and France shall leap to arms.

O Europe, camp of soldiers, camp of slaves!  
Thy men are reared for slaughter, and thy maids  
For tears. Thy wheat-fields are no longer blue  
With peaceful corn-flower, but with poppy red—  
The blood-red poppy with its death-black heart.  
Come hither, men, to our free Western land!  
Come hither, Muse, to our fair realm of peace!

..

Victor Hugo proved to be a prophet in some things. Let us hope that this vision of his will come true also:

I represent a party which does not as yet exist, the party of revolution, of civilization. This party will hold the twentieth century. There will come forth from it, first, the United States of Europe, and then the United States of the World.

The republic, which is not yet ripe, but which in a century will embrace the whole of Europe, signifies that society is its own sovereign. It protects itself by means of its citizen-soldiers; judges itself, by trial by jury; administers its own affairs, by local government; rules itself, by popular representatives. The four limbs of monarchy—the standing army, the courts, the bureaucracy, the peerage—are for the republic only four troublesome excrescences which are withering up and will soon die.

..

Every time the question of prohibition is agitated somebody comes out with the claim that bad cooking has done more harm in the world than liquor. Nobody, so far as I know, has ever attempted to prove this by reference to the statistics of the prisons, the insane asylums or the hospitals or has suggested what it has to do with the question if true. This culinary argument has reached the antipodes and the *Sydney Bulletin* puts it into verse:

What's meat to one is to another booze;  
Who feels a craving base for pork or ham  
Corn beef and carrots, say, or even lamb,  
May find these things his intellect confuse.  
Aye, steak and onions, taken to excess,  
Ofttimes have wrecked domestic happiness.

Seed-cake may land an oldster on his ear,  
Or rouse him to unseemly levity,  
And currant-bun with some may disagree,  
Affecting them as others are by beer.  
'Tis plain the eat and burden of the day  
Can havoc with the public's morals play.

..

I wonder what has become of that French teacher who shortly before the war taught his pupils to sing a pacifistic version of the "Marseillaise":

Plus d'armes, citoyens!  
Rompez vos bataillons!  
Chantons! Chantons!  
Et que la paix féconde nos sillons!

Perhaps he is in the trenches shooting at the director of Hauptmann's

*Festspiel* of 1913 which ended with Germania leading the nations into the Temple of Love and Peace. This scene was too much for the Crown Prince. He left the theater in disgust at such nauseant sentimentality. Verdun is more to his taste.

If Gilbert and Sullivan's "Pirates of Penzance" is still played in London I presume the military censor eliminates the lines:

For my military knowledge tho I'm plucky  
and adventury,  
Has only been brought down to the beginning of the century,  
But still in learning vegetable, animal and mineral,  
I am the very model of a modern major-general.

..

The Socialist organ *Vorwärts* is one of the few German papers which reveal the seamy side of war. The story of what a lady observed on a train between Bremen and Oldenburg is well worth reprinting for the benefit of giggling girls elsewhere:

In the compartment which she entered there were two young girls, and afterward a man came in, accompanied by his wife. No sooner was the latter seated than she began counting slowly on her fingers: "One, two, three"—and continued to repeat the words at short intervals.

The young girls giggled, and whispered to one another about the singular conduct of the woman. At last the man could contain himself no longer, and he addressed the girls: "Perhaps you will stop your silly laughing when you learn that my wife has lost three sons at the front. I am now taking her to an asylum." A sinister stillness at once made itself felt in the compartment.

..

A great author is one who successfully challenges the taste of the world. "I know what I want," says the World. "Give me this and this."

"No, you don't know what you want," says the Author. "Take that and that."

Then the great round World takes it and rejoices. And when he is dead a monument is erected in his honor by the defeated party.

..

St. Francis of Assisi must still live in Russia, for surely from him comes that prayer for the horses in the war liturgy:

And for those also, O Lord, the humble beasts, who with us bear the burden and heat of the day, and offer their guiltless lives for the well-being of their countries we supplicate Thy great tenderness of heart. For Thou hast promised to save both man and beast and great is Thy loving-kindness. Lord have mercy!

..

A freshman in a New York university who was asked to write a theme on his first impressions of the city began with this: "The most amazing sight I ever saw was the skyscrapers of New York crossing the Hudson River on a ferryboat." Such optical illusions of relative motion are not uncommon.

## A MEMORIAL TO DR. WARD

BY W. S. SCARBOROUGH

*The Independent is glad to publish the following appeal to its readers from the president of Wilberforce University. I may add that I have visited Wilberforce, know its president well and can vouch for the good work being done there for the elevation of the negro. While the university maintains a very good industrial department, it has always stressed the higher education of the negro, believing its greatest service lay in training its students for professional life and for the leadership of the race. I have often heard Dr. Ward speak with enthusiasm of the work Wilberforce was doing, and I am sure that any of his friends who feel like responding to President Scarborough's appeal will be aiding a genuinely worthy project.*

HAMILTON HOLT.

IT is the purpose of Wilberforce University to erect a science building as a memorial to the late distinguished editor of The Independent, naming it the "William Hayes Ward Science Hall." We feel that no better tribute could be paid to his memory by the negro. He virtually devoted his life to the interests of the race. By voice and pen he aided our emancipation, upheld our rights and denounced our wrongs, advocated our education and encouraged our ambitions and inspired us with hope for a future free from prejudice and proscription. Dr. Ward was also a personal friend of Wilberforce University and of Bishop Daniel A. Payne, the chief of its founders. Whatever pertained to its welfare deeply interested him. Therefore he noted with deep regret, on a visit some four years ago when he address us during Commencement Week, that our quarters for science teaching were totally inadequate.

Every one who knew Dr. Ward knows what a keen interest he took in all lines of scientific endeavor and research. It seems to us, therefore, very fitting that we strive to build for our great need a monument to him that will not only show our grateful appreciation as a people of his labors in our behalf, but that will also have a close connection with the things in which he took so great delight. It is equally fitting that the oldest negro school in America should be the one to put forth this effort and that its campus should be the spot where such a memorial shall stand.

Dr. Ward was always quick to recognize a real need, and there is no question that a science building is one of the greatest needs of Wilberforce University today. All its class work along scientific lines is greatly hampered by lack of room for work and for even the proper placing of the laboratory equipment for which friends are making arrangements to provide. Our work planned for advance study demands the new building, as does the constantly increasing work in certain industries and in agriculture. We cannot even make the most profitable use of our small but well selected museum because it cannot be properly arranged in our present crowded quarters. Thus we find very important work suffering at every point because of needed enlargement. Wilberforce University, because of its strategic situation, its environment

and many admirable facilities, is one of the strongest centers of negro higher education in the country. Its work is constantly growing. It provides all-round training in literary courses, teachers' training courses, and vocational courses, of which there are seven. With forty-one instructors and five hundred students it is serving most acceptably in a wide field of negro education.

It is the oldest institution of its kind in the United States, as I have just said, dating as far back as 1847,—when was founded the Union Seminary, a manual labor institution for the education of colored people, and which was subsequently merged into Wilberforce University.

It was named in honor of the great English statesman and benefactor of the colored race—William Wilberforce.

It was incorporated in 1856, and its first board of trustees included Governor Salmon P. Chase, who at his death left it \$10,000.

Major General O. O. Howard, Major General Saxton, Dr. Bellows, Dr. Edward Everett Hale, Frederick Douglas and other men of prominence have served as trustees of this institution.

Mr. Andrew Carnegie recently gave \$17,500 toward the erection of a \$50,000 building for girls, which with the \$20,000 already donated by him for a library building, made his total contribution to Wilberforce University, \$37,500.

It has today an enrollment of five hundred young men and women, from nearly all the states of the Union, from the isles of the sea, and from Africa, and needs still larger quarters for them.

We are therefore sending this appeal to The Independent, to the readers of this staunch and fearless paper, to the friends of negro education generally and to the friends of Dr. William Hayes Ward in particular, asking their aid in accomplishing our purpose. The cost of this proposed building will be \$40,000. We beg earnestly that out of their philanthropic love of humanity, out of their interest in education as the saving and uplifting power of a nation as well as a race, and out of their friendship for and pride in the master mind that has gone to its reward, our friends and Dr. Ward's friends will assist us in accomplishing our purpose. The memory of one who delighted in service will thus be perpetuated in an institution whose aim is service.

Wilberforce, Ohio

# Breakfast in Five Minutes

Getting a warm, nourishing breakfast on a cold morning for a commuter-husband that must catch a train and a hungry boy that must hustle to school is easy for the woman who knows

## Shredded Wheat

the ready-cooked, ready-to-eat, whole wheat food that supplies all the nutriment needed for a half day's work or play. Heat two or more Biscuits in the oven to restore crispness, then pour hot milk over them, adding a little cream and a dash of salt. The perfect food to work on, to study on, to play on. Better than porridges because it encourages mastication, which develops sound teeth and healthy gums. Always the same price, always the same high quality.

## WHAT CAN WE DO MORE?

**T**HE United States has protested against the deportation of Belgian non-combatants to enforced labor in the workshops of Germany. The protest is brief and unequivocal:

The Government of the United States has learned with the greatest concern and regret of the policy of the German Government to deport from Belgium a portion of the civilian population for the purpose of forcing them to labor in Germany, and is constrained to protest in a friendly spirit, but most solemnly, against this action, which is in contravention of all precedents and of those humane principles of international practice which have long been accepted and followed by civilized nations in their treatment of non-combatants.

Furthermore, the Government of the United States is convinced that the effect of this policy, if pursued, will in all probability be fatal to the Belgian relief work, so humanely planned and so successfully carried out, a result which would be generally deplored and which, it is assumed, would seriously embarrass the German Government.

Will our protest do any good? Why should we think so? The German will know no law but force. It submits itself to no motive but imperial self-advantage. If we could make it better worth Germany's while to treat Belgium with humanity than to oppress its people, Germany might hesitate. But "the opinions of mankind" have no influence with the rulers of Germany's destiny. Neither the Kaiser nor those below him care a pfennig for what we think about their deeds.

It is well that we should protest. We cannot too often go on record before the court of the world's opinion in protest against inhumanity and barbarousness. But unless and until we are ready to exact a higher penalty from offenders against humanity than the weight of our passive disapproval, we need expect from Germany no deviation from its ruthless course.

## THE MAN OF THE HOUR

**S**UPERFICIALLY the shake-up in the British Government resembles the political maneuvers that used to be customary before the war where a demand for a change of administration was met by a rearrangement of seats in the Cabinet. When things go wrong the people in power are—quite properly, tho not always justly—held responsible for it, but generally the dissatisfaction of the public in England as well as the continent could be appeased by a replacement of the ministers considered at fault by some of their colleagues or by other politicians of the same sort from a party nominally different. The failure of the Allies to make any net gains on the map of Europe during the year, and particularly their distressing blunder in the Balkans, brought about cabinet crises in Russia, France and England. The *Manchester Guardian* puts the situation most frankly and succinctly:

The crisis in the Ministry is but a reflection of the crisis in the war. The crisis in the war amounts to this: That the progress of events and succession of bitter experiences have at last brought home to the minds of most men the fact that we are not winning the war and the further continuation that, with the present methods of waging the war, we shall never win it.

But the overthrow of the Ministry in England at least means more than the discarding of discredited statesmen. It means that the select and aristocratic circle which has, under whatever party name, always ruled England, is being displaced by a new and more democratic element. Lloyd George, the little Welsh lawyer and lay preacher, who as head of the British Govern-

ment is now in control of the largest empire, of the largest navy, and indirectly of the largest army that the world has ever known, had neither hereditary title, family influence, ecclesiastical connections, business support, nor personal wealth to help him in his rise. But he had a peculiar genius for discovering what most needed to be done at any moment and a remarkable ability for doing it.

Lloyd George has been execrated in turn by every party, yet he now has the support of them all. He ruined his career at the start—one would have supposed—by espousing a lost cause, that of the Boer republics against the empire. To take part in a peace meeting was then as dangerous as it is now, and Lloyd George once had to disguise himself as a policeman to escape the mob. His fiery denunciations of the lords in his Limehouse speeches gave him the reputation of an unprincipled agitator, and when he attacked the entrenchments of aristocracy, the unearned increment of the land, there were no words too foul to be applied to him. The curse of the Church was launched at his devoted head because he disestablished the Church in Wales. His advocacy of temperance and woman suffrage brought upon him the hatred of the liquor interests and of the conservative classes. His scheme of social reforms involving old age pensions and insurance against sickness and unemployment might have secured for him the gratitude of the workingmen, but when they found that these benefits were not a free gift, but that they would have to contribute something toward the fund, they,

### LLOYD GEORGE COMES TO THE FRONT

THOSE WHO ARE FOND OF DEDUCING CHARACTERISTICS FROM FACIAL EXPRESSION AND BODILY ATTITUDE MAY FIND IN THIS SNAP-  
SHOT OF ENGLAND'S NEW PREMIER THE REASONS WHY HE HAS SUCCEEDED IN CONCILIATING  
ALL PARTIES AND CARRYING THRU PROJECTS THOUGHT IMPOSSIBLE

too, turned against him, and when he proved that by their dilatory tactics and their drinking habits they were failing to supply the army with ammunition, their resentment rose to furious wrath.

Yet now as Prime Minister Lloyd George commands the support of Unionists, Liberals, Laborites, Ulsterites and Nationals, Churchmen and Nonconformists, and he is the only man in England who could. His courage and outspokenness have won the respect of his opponents; his executive ability and tact have enabled him to carry out reforms that were thought impossible. It was he who, as the first Minister of Munitions, brought order out of confusion and supplied Kitchener's army with the shells it lacked. When Kitchener was drowned Lloyd George succeeded him as Minister of War, tho here he has been hampered by an unwieldy Cabinet of twenty-three. When the Irish rose in revolt Lloyd George was called in to arrange a compromise, and he actually succeeded in getting Carson and Redmond to agree upon a plan for Home Rule, only to have it disavowed by his colleagues of the Cabinet. He has settled strikes and brought corporations to terms. He has speeded up and to a considerable extent sobered up the British workingman. He has had the spending of a larger amount of money and has been the employer of a larger number of men and women than any one else since the world began. In all these various activities he has been able to inspire those who worked with him or under him with something of his own energy and progressive spirit.

Now he is called upon to speed up the war. Rightly so, because he was one of the first to point out the fault of the Allies. On December 20, 1915, he stirred the House of Commons by a courageous and eloquent speech, one passage of which made an indelible impression:

Too late in moving here, too late in arriving there, too late in coming to this decision, too late in starting with enterprizes, too late in preparing. In this war the footsteps of the Allied forces have been dogged by the mocking specter of "Too late!" and unless we quicken our movements damnation will fall on the sacred cause for which so much gallant blood has flowed.

The year that has passed since this warning was uttered has unfortunately confirmed its truth and added new instances. It remains to be seen whether the call of Lloyd George to the leadership has also come "too late."

#### WHAT WILL GERMANY DO NEXT?

**R**UMANIA has been overrun so rapidly that we have hardly had time to consider what new possibilities it opens up. British commentators admit that this unexpected display of German energy means the prolongation of the war, but they are disposed to regard the Rumanian campaign as a side issue of no great strategic importance, for the war will be decided in France, not in the Balkans. But the Cabinet crisis in England suggests that there is some opposition to this official view and that this opposition has come to the front in the person of Lloyd George. If this is so, we may expect to see General Sarrail's army set in motion.

This army, which was sent to Salonica for the purpose of carrying the war into Bulgaria, has remained inactive for more than a year. But recently it has done two things: it has brought pressure upon the King of the Greeks to disband his troops and surrender his navy and artillery, and it has cleared the Bulgars and Germans from the Serbian border and made connections

with the Italians in Albania. The new territory thus brought under the control of the Allies is not extensive, but it is important because it places a barrier between the forces of the Greek King and the forces of the Central Powers in Serbia, at the only point where they could come in contact. That is to say, before the Germans and Bulgars can respond to the appeal of King Constantine to rescue him from the Allies, they must retake Monastir, which they lost last month. General Sarrail evidently suspects that the King would join forces with his brother-in-law, the Kaiser, if he could only get in touch with him. King Constantine is alternately yielding and resisting, friendly and hostile to the Allies, apparently in the hope that he can hold them off until the Kaiser's troops can break thru the barrier at Monastir. Already we hear that German troops have been sent from Rumania to begin an attack upon Monastir, altho Rumania is only half conquered. If they succeed in breaking thru the Germans will be reinforced by some 300,000 Greeks, and with their aid the Italians could easily be dislodged from Avlona, their only hold on the Albanian coast, and the Allies might possibly be dislodged from Salonica.

But there is another prospect opened to the Teutons by their Rumanian victory, that is the invasion of Russia and the capture of Odessa. It would seem absurd to think of such a thing if Germany were as weak and Russia as strong as the journals of the Allies would have us believe. But the inertness of the Russians in Galicia for the last three months and their failure to come to the rescue of Rumania give reason for suspecting that they are seriously crippled for lack of munitions, trained officers or other essentials. Lord Northcliffe, the editor of the London *Times*, is said to have made the indiscreet disclosure, just after his return from the seat of war, that the Russian forces at the front are only half the British and inefficient at that. The statement was called by Lloyd George "a gross inaccuracy." This it might be and still indicate that there has been a gross exaggeration in the number of millions which Russia is supposed to have at her disposal.

Assuming, then, that Russia's inertness is due to a real lack of efficiency and not to a temporary paralysis imposed by a pro-German premier, it is not impossible to conceive of a drive thru Bessarabia from the Pruth to Odessa. The distance is only 150 miles, less than half the distance to which the Germans have penetrated Russian territory further north. There is a railroad leading from Galatz to Odessa, and the Dniester River might serve as an avenue from Galicia. Odessa is to the Black Sea what Petrograd is to the Baltic and the capture of this port of the great grain belt would afford further relief to German hunger.

But it is idle to speculate as to the prospects of such an adventure when we do not know the real strength of either party. A problem with two unknown quantities cannot be solved by a single equation. Germany may decide to undertake neither of these new adventures, but to be content with her present position in Rumania. She has reduced her frontier by six hundred miles in the last month, and could now entrench on a line less than a hundred miles long between the Danube and the Carpathians. But the German policy is to keep on the offensive, so it seems quite likely that they will attempt a drive southward into Greece or eastward into Russia either now or next spring.

## BY THE RIVERS OF BABYLON

IT was a characteristic German touch that when the order was issued for the young Belgians to assemble at the railroad station for deportation to Germany they were notified to bring with them any portable musical instruments on which they played. Just so the slave-drivers when they sent their negroes down the river saw to it that they went with a banjo on the knee. We may assume that the Belgians at forced labor by the Elbe or the Rhine will find the 137th Psalm their favorite chapter.

For there they that carried us away captive required of us a song, and they that wasted us required of us mirth, saying, "Sing us one of the songs of Zion." How shall we sing the Lord's song in a strange land?

Many an article has been written in the last two years comparing Prussia with Assyria and new analogies continue to appear.

## COFFEE HOUSE VERSUS SALOON

THE advancing wave of prohibition in this country has brought to the fore a difficult and pressing problem in temperance reform. The saloon as a social and economic institution seems to be doomed. Its condemnation rests not only upon moral grounds, but upon increasing evidence of its tendency to destroy the most beneficial social institutions and to check industrial and economic progress. If it is to disappear, however, some adequate adjustments and arrangement must be made to supply its place. For there is no doubt that the saloon has ministered to certain characteristic human wants.

The need of some stimulus has so far been a persistent force in the development of society, and the instinct for association in a common place of meeting under exhilarating conditions is a part of man's nature. Alcoholic drinks and the public house have proved to be easily accessible means to meet these ends. Where these social requirements have been overlooked or neglected the enforcement of prohibitory laws against the saloon has been extremely difficult. Where they have been met or substantially ministered to by other agencies alcoholic excesses have been materially reduced.

It has long since been noticed that countries using liberally such infusions as tea, coffee or cocoa have been able to combat more successfully the excessive use of alcoholic liquors. It is, therefore, significant that at the recent meeting of the National Coffee Roasters' Association announcement was made that the consumption of coffee had largely increased in those states which have in recent years gone into the prohibition column. The association considered the advisability of establishing coffee houses in the more thickly populated cities of the country in competition with the saloons. The Convention is reported to have adopted as a slogan "Coffee as a Substitute for Liquor as a Stimulant." The suggestion not only deserves consideration, but if put into effect will go a long way toward alleviating the difficulties that must arise through the abolition of the saloon.

The development of tea, coffee and cocoa houses, in connection with which might be found other accessories of social intercourse, would satisfy reasonably well some of these human cravings which operate powerfully in society and are not met by the moving picture shows, the recreational centers, the open forum and other

similar modern creations which have gone far to turn aside the patronage of the saloon.

The coffee house may yet prove a valuable help in driving out the liquor saloon and keeping the doors barred against its reëntrance into our social system.

## MR. ROOT AND SUFFRAGE

ELIHU ROOT is an ardent anti-suffragist. The great statesman, who above all his contemporaries is supposed to seek in everything its intellectual justification, no doubt has his reasons for his opposition to votes for women. But surely he cannot expect his countrymen to accept without further elucidation the argument he gave in his letter read December 5 at Washington before the first National Anti-Suffrage Convention.

Said Mr. Root:

It [the Federal suffrage amendment] is a destruction of the right of self-government and a subjection of the people of New York to the government of others. Having failed to secure the assent to woman suffrage of such states as South Dakota and West Virginia and Ohio and New York and Pennsylvania, the advocates of woman suffrage now seek to compel such states to accept it against their will and to compel them to carry on their local government and select their representatives in the national government in conformity to the opinions of the people of other states who are in favor of woman suffrage. I think such an attempt is contrary to the principles of liberty upon which the American Union was established and without which it cannot endure.

Without the right of local self-government we should lose the better part of our liberty. To subject any section of the country in its local affairs to the dictation of the vast multitude of voters living in other parts of the country would create a condition of intolerable tyranny, and to use the power of the nation to bring about that condition would be to make the nation an instrument of tyranny. It is needless to argue that this would ultimately destroy the nation.

The one exercise of national power over suffrage—to prevent discrimination against the black race—was made and justified only upon the same grounds which justified the war and the Emancipation Proclamation, and for the time being destroyed all local government in the seceding states. It established no precedent and justifies no attempt at control upon a less terrible and compelling cause.

This is a curious position for a leader of the Republican party to take. It is good old Democratic doctrine. But the doctrine of states' rights received its coup de grace half a century ago—when it was invoked in defense, to use Mr. Root's phrase, of "discrimination against the black race." Does Mr. Root seriously intend to appeal to that doctrine now in defense of discrimination against one-half of the white race?

And does he question the constitutional right of the majority of the states to regulate the qualifications of the national electorate? On his theory could not the adoption of every constitutional amendment to which any state objects be called subversive of local self-government?

Surely we are entitled to hear further from the great constitutional lawyer on his interesting theory.

## WE GIVE TWO CENTS FOR THE ARMENIANS

THE total amount contributed by the American people for Armenian and Syrian relief from the beginning of the campaign on October 1 to November 23 is \$2,018,902.98. The sum seems large, but is pitifully small compared with the ability of the givers or the need of the recipients. It is less than two cents apiece for each of us.

Here we are confronted with the spectacle of the most terrible religious persecution of all history, far

surpassing in extent and brutality the persecution by Nero and the harrying of the Huguenots. As nearly as can be ascertained a million Christians have been murdered or starved to death. There is nothing to be done about that now. Killing a million Turks, most of them innocent of the crime, would not bring back to life the littlest of the slaughtered babes. What does concern us—or should—is that there are two million more Christians in Armenia and Syria who are still alive, but not likely to live long unless we get help to them soon. Some of them have been swept from their homes by the wave of war. Some of them have been transported hundreds of miles away and left to starve in the desert. Men have been conscripted for the army; women taken to the harem; children kidnaped into slavery. Thousands have been slain because they refused to deny Christ and those who survive are threatened with the same fate. In former times it was possible for some to escape massacre by flight to the United States, but this city of refuge is now closed to them by the war. This is a field in which Americans have always taken a special interest because of those who have come to us and because of the schools and missions we have supported there. But what avail is all our missionary work if the people themselves are destroyed?

Yet when told of this dire distress the American people have on the average not been willing to sacrifice two cigarets or sticks of chewing gum. We ought to do more than the belligerents for the relief of the suffering in Europe, but we are doing less. The *profit* we have made on the food sold to the British and French for the relief of the Belgians is greater than the amount we have *given* to that fund. The American Committee for Armenian and Syrian Relief, whose headquarters is at 70 Fifth avenue, New York, is preparing to send a Christmas ship filled with food and clothing for the destitute near the Mediterranean coast. For those in the interior money is sent to be spent locally by American consuls and missionaries, aided in some places by German officials and teachers. The two million dollars so far sent is mostly spent already, leaving the long winter still to provide for.

### GOETHALS, MASTER OF EFFICIENCY

IT is related of Kitchener that once during the South African campaign a subordinate officer reported to him a failure to obey orders and proceeded to give the reasons for his failure. K. of K. heard him thru and said: "Your reasons for not doing it are the best I ever heard. Now go and do it."

There is the spirit of efficiency for you. To "go and do it"—with all that that implies—is to be efficient. To be able not only to go and do it yourself but to make others go and do it too, cheerfully, zealously, effectively, is to be a master of efficiency.

It is precisely this quality, possessed in superlative degree, that distinguishes George W. Goethals, the modest, unassuming army engineer, who needs no more impressive title to commend him to history and posterity than that of builder of the Panama Canal. "The Colonel," as thousands of Canal workers have known him affectionately during the years when they dug the Big Ditch under his inspiring leadership, is done with his biggest job. But he still serves his country, just at

present as chairman of the commission which is to find out how the railroad eight-hour law works. His appointment is the best possible assurance that this big task of investigation of a dangerously contentious subject will be thoroly and adequately done. That is the only way "the Colonel" does things.

It is a significant fact that whenever we come to look at the career of a man who is worthy to be called master of efficiency we find one fact standing out above all the rest. The efficient ones are hard workers. They do not spare themselves. They give the best that is in them and give with both hands. So it is with Goethals. On the Canal every one worked hard; but no one worked harder than "the Colonel." No eight-hour day for him; no luxurious holidays; no "loafing on the job." He stopped work at night only to sleep; sometimes, in his own phrase, he "took the Canal to bed with him."

He is a glutton for work and a bulldog for persistence. One of those who were most closely associated with him on the Isthmus said once: "If he has a weakness it is that when he has made up his mind that a certain way is right, you might as well talk to a stone. Goethals won't hear you. He'll set his teeth in it like a snapping turtle and never let go till it thunders." That is a vital part of his secret: "terrible tenacity—terrible, but open-eyed and intelligent. He is a finisher." "The Colonel's" motto might well be exprest in a slight modification of the vernacular saying of the day, "Don't start anything you can't—or don't—finish."

But his efficiency lies not only in the quantity and the quality of the work he gets out of himself, but in the amount and the excellence of the work he gets from others. As he himself once exprest it: "To successfully accomplish any task it is necessary not only that you should give it the best that is in you, but that you should obtain for it the best there is in those who are under your guidance."

If there was anything more wonderful on the Isthmus than the efficiency of the force that was building the Canal, it was its esprit de corps. Everybody from "the Colonel" all the way down and back again believed in the Canal, loved the Canal, and fought the good fight that the Canal might be made a great reality. They were ready to give every ounce they had for the Canal because "the Colonel" believed in them and they believed in him. It was their job, their responsibility, their trust. The marvelous spirit of the Canal builders was a reflection in a myriad-faceted mirror of the spirit of their chief.

His heart matched his head, and worked in perfect harmony with it. He said: "Be considerate, just and fair with them in all dealings, treating them as fellow members of the great brotherhood of humanity."

In this spirit he approached the human problems that constantly confronted him, and with this spirit he conquered. His broad humanity met the instant, generous response of the thoroly human units of the great machine he guided. "Tell the Colonel" was the characteristic refrain of a popular song on the Isthmus; and every one with a grievance or a problem or a suggestion told "the Colonel" and received ungrudging justice, generous helpfulness and cordial recognition.

Out of it all came efficiency in richest measure; and the building of the Canal will always stand as a monument to the man who "went and did it."

# THE STORY OF THE WEEK

## Greece on the Verge of War

It is reported from London that King Constantine is to be deposed by the Allies and a provisional government set up under ex-premier Venizelos leading eventually perhaps to the establishment of a Greek republic. The French are said to have long favored the overthrow of the monarchy, but the British and Russian governments have favored milder measures of dealing with the King because of his family relations with their own sovereigns, and because it would tend to weaken the respect for kings in general. But the German conquest of half Rumania has encouraged King Constantine in his resistance to the demands of the Allies, and from intercepted communications it is learned that the Kaiser has assured him that if he will attack General Sarrail's army in the rear while the Germans and Bulgars attack the front from Monastir they can jointly drive the Allies from Greek territory. The prospects of such a campaign are discussed in the editorial "What Will

Germany Do Next?" That a conjunction with the Greeks is to be attempted is indicated by the appearance before Monastir of Hindenburg's pet troops, the Mazurian infantry, with which he drove the Russians from East Prussia in August, 1914. These have, during the week, driven the Serbs from newly acquired positions both east and west of Monastir.

Monastir is about a hundred miles north of Larissa, where King Constantine is said to be assembling his troops and where he will make his stand if the Allies drive him out of Athens. The attempt made last week by Admiral du Fournet to disarm the King's troops was frustrated by a rising of reservists which, whether authorized by the King or not, resulted in the abandonment of the attempt. The two thousand French and British blue-jackets who were sent up from the port of Piraeus to seize the Greek artillery at Athens were fired upon and obliged to retreat to the coast.

The Allies accuse the King of trying to trap their troops, but the Greek

## THE GREAT WAR

- December 4—Premier Trepoff announces to the Duma that the Allies have promised Constantinople to Russia. Rumanians routed on Arjish River.
- December 5—Asquith resigns premiership. Defeat of Portuguese by Germans in East Africa reported.
- December 6—Germans take Bucharest and Ploeshti. Germans attack Hill 304, northwest of Verdun.
- December 7—French Chamber supports Government. Lloyd George accepts post of Prime Minister.
- December 8—Germans defeat Serbs near Monastir. Allies blockade Greek coast.
- December 9—Bulgars cross Danube from Dobrudja. Heavy cannonading of British lines in France.
- December 10—Greek King agrees to let French control Corinth Canal. Commercial submarine "Deutschland" returns to Germany in nineteen days.

Foreign Minister claims that he had warned the Allies that the guns would not be surrendered, and that after an armistice had been arranged at the request of the Admiral, the fleet bombarded Athens, firing thirty-eight shells, of which seven were directed at the royal palace. He protests to the neutral Powers against this bombardment of an unfortified city in a neutral country.

After driving the Allied marines out of Athens the royalist troops searched the city for Venizelists and imprisoned 1600 of them. According to the statements of eye-witnesses the prisoners were treated with shocking brutality by the soldiers and the mob. The Venizelists, under the protection of the Allies, had established a recruiting office right in Athens, altho their army was intended to oppose the King.

In order to force Greece into submission the Allies have declared an embargo of the Greek coasts. Since the country is largely dependent upon its commerce it is expected that this measure will soon bring it to terms. There is said to be food enough in Greece to last three weeks, but before this some of the towns that have only sea communications will suffer.

**The Capture of Bucharest** Bucharest, the capital of Rumania, Brailmont's model fortress, the most thoroly fortified city in the world except Paris, surrendered at sight when the Germans got to it. On December 3 the official statement of the Russian War Office announced that Mackensen's troops had been defeated before Bucharest and thrown back with the loss of many prisoners and much booty, including twenty-six guns. But at the time when Petrograd was thus claiming his defeat Mackensen had Bucharest virtually within his grasp, and three days later he was driving

THE CONQUEST OF RUMANIA

The advance of the armies under the German generals Falkenhayn and Mackensen is shown by the spread of the shaded area on the map. By the capture of Ploeshti they have cut the railroad between Bucharest and the oil wells of that region. They are now aiming at the next railroad junction, Buzeu, and have made a new crossing of the Danube over the Chernavoda Bridge in order to cut the railroad leading east from Bucharest. The Russian attacks on the eastern passes of the Carpathians have made little progress.

Paul Thompson

## THE EMPTY SPLENDOR OF BUCHAREST

The Rumanian Government has removed to Jassy and the German troops are now in possession of the capital

thru the streets of the city in an automobile showered with bouquets from the townsfolk, presumably the Austrians and Germans who form a large part of its population. The thirty-six forts that encircled the capital proved no protection. A few of them were bombarded and carried by assault of infantry, but the rest surrendered without resistance. The garrison had, in fact, been mostly withdrawn in advance.

The Rumanians made their last stand on the Arjish (Argechu) River, which runs a dozen miles southwest of Bucharest. Here the Germans expected considerable difficulty, for the river, now at flood, is several hundred yards wide. But the Rumanians, beaten at several points with heavy losses, withdrew so rapidly that they did not even blow up the bridges.

At the same time the Ninth Army under Field Marshal von Mackensen accomplished another feat of more importance than the occupation of Bucharest. By a rapid march northward the troops of Mackensen took Ploeshti, the railroad where the line from Kronstadt to Bucharest joins that leading north toward Jassy, the new capital. This left the Rumanians at Bucharest with only one outlet, the railroad running east to the Chernavoda Bridge. The rich oil fields of Rumania lie mostly between Ploeshti and the mountains, and this region was guarded by a large force of Rumanians and Russians. But the advance brought these troops under attack from the north, south and west, and most of them were captured before they could be extricated from this predicament. The Germans claim to have taken more than 70,000 prisoners within a week. The demoralization of the Rumanians was so complete that in some cases large bodies of them surrendered to cavalry patrols.

Asquith  
Ministry Out

The Coalition Cabinet which has been in power for the past year and a half has dissolved on account of disagreement over the conduct of the war. On what particular points the

split finally occurred is not disclosed, but in the editorial of last week on "British Embarrassments" we discussed the chief causes of public dissatisfaction. Premier Asquith at first hoped that by concentrating the supreme command into a war council of four or five it might be possible for him to retain his office, but this was not sufficient to satisfy the demand for a radical reorganization, so he resigned. The King, according to custom, called first upon Bonar Law as leader of the Unionists, the largest party in Parliament, but he declined to undertake to form a cabinet, so David Lloyd George, Secretary of State for War, was entrusted with the undertaking, and after consulting with the leaders of the various parties was able to announce his success to the King, whereupon he received the appointment of Prime Minister and First Lord of the Treasury and kissed the King's hands.

At the outbreak of the war a Liberal Ministry was in power, which was supported by the Liberal, Labor and Irish Nationalists in the House of Commons. When it was realized that the war was

to be long and would require the co-operation of all factions, the Cabinet was enlarged to include all parties except the Nationalists, who refused to take office unless Home Rule, which had been enacted, should be put into effect. The Coalition Cabinet so constituted was so large and composed of such incompatible elements that its action was often slow and inconsistent, and in spite of the intention of maintaining a truce between parties, it was impossible to prevent personal ambitions and political antagonisms from cropping up.

Mr. Asquith is a man of consummate tact and political skill, as is shown by the fact that he has held office continuously for eight years and a half, which is longer than any other premier of recent times. Since taking office he has weathered two general elections and carried thru such contentious measures as the restriction of the House of Lords, Home Rule and labor legislation. He has commanded the support and respect of all parties during the stress and strain of the war, but it has come to be commonly felt that the times demanded a man of vigor and initiative rather than a parliamentarian however experienced and able. That he bears no grudge against the man who has supplanted him is shown by his promise of loyal support to the new administration.

With him there passes out of power Earl Grey, who as Foreign Minister consolidated the Entente of France, England and Russia into the present alliance of ten powers. Two years ago he was regarded by both Liberals and Unionists as an incomparable diplomatist, but the manifest mistakes of the Allies in the management of Balkan affairs has cast discredit upon him.

French Cabinet  
Crisis

Disappointment over the results of the summer's campaign and the collapse of Rumania has had the same effect in France as in England, tho it appears the French Cabinet will not be overthrown, but will be re-

Central News

## THE SLOW-MOVING MARCH IN MACEDONIA

Bullock carts taken from the Bulgarian peasants are the means upon which the French depend to convey the captured Austrian guns to their base

organized. The discussion in the French Parliament was carried on in secret session and the French censorship excludes from the press political as well as military matters, so we have even less information as to the charges brought against the Government than we have in the case of England. We are informed, however, that at the conclusion of the debate the Chamber of Deputies express its confidence in the Government for its conduct of the war by a vote of 344 to 160. Last June, when a similar discussion was held in secret session, there were ninety-seven votes cast against the Government, so it is evident that the opposition is growing. It is supposed that the Briand Ministry secured the support of the Chamber by conceding some of the demands of its critics.

What points are conceded is not disclosed, but it is known that one of the chief reforms demanded was, as in England, the reduction of the present unwieldy coalition ministry of twenty-four to five, in charge respectively of Foreign Affairs, Finance, Interior, War and Marine, or the concentration of full authority for the conduct of the war in the hands of one man, a virtual dictatorship. Other proposals involve the mobilization of the whole civil population and the confiscation of all incomes over \$10,000 a year.

There is also a widespread desire for a change in the army command. It is felt that Joffre has done his best work and should give way to some younger and more energetic man. This might be Foch or Castelnau, who distinguished themselves in the campaign of 1914, but it is quite as likely to be Petain or Nivelle, who have made their reputations since the war began in the defense of Verdun.

#### PREMIER ASQUITH RESIGNS

The Coalition Cabinet, headed by Mr. Asquith, which was appointed a year and a half ago, has been forced out by public demand for a more efficient handling of England's part in the conduct of the Great War. Mr. Asquith has held office for eight and a half years.

### THE NEW BRITISH GOVERNMENT

#### THE WAR COUNCIL

Premier—David Lloyd George, (L.).  
Lord President of the Council—Earl Curzon, (U.).

Chancellor of the Exchequer—Andrew Bonar Law, (U.).

Without Portfolio—Arthur Henderson, (Lab.).

Without Portfolio—Lord Milner, (U.).

#### NOT IN THE COUNCIL

Lord High Chancellor—Sir Robert Bannatyne Finlay, (U.).

Secretary of State for the Home Department—Sir George Cave, (U.).

Secretary of State for Foreign Affairs—Arthur J. Balfour, (U.).

Secretary of State for the Colonies—Walter Hume Long, (U.).

Secretary of State for War—The Earl of Derby, (U.).

Secretary of State for India—Austin Chamberlain, (U.).

President of the Local Government Board—Baron Rhondda, (L.).

President of the Board of Trade—Sir Albert Stanley.

Minister of Labor—John Hodge, (Lab.).

First Lord of the Admiralty—Sir Edward Carson, (U.).

Minister of Munitions—Dr. Christopher Addison, (L.).

Minister of Blockade—Lord Robert Cecil, (U.).

Food Controller—Baron Devonport, (L.).

Shipping Controller—Sir Joseph Paton Maclay, (L.).

President of the Board of Agriculture—Rowland E. Prothero, (U.).

President of the Board of Education—Herbert A. L. Fisher, (U.).

First Commissioner of Works—Sir Alfred M. Mond, (L.).

Chancellor of the Duchy of Lancaster—Sir Frederick Cawley, (L.).

Postmaster General—Albert Illingworth, (L.).

Minister of Pensions—George N. Barnes, (Lab.).

Attorney General—Sir Frederick E. Smith, (U.).

Solicitor General—Gordon Hewart, K. C., (L.).

Secretary for Scotland—Robert Munro, (L.).

Lord Advocate—James A. Clyde, K. C., (L. U.).

Solicitor General for Scotland—Thomas B. Morison, K. C. (L.).

Lord Lieutenant of Ireland—Baron Wimborne, (U.).

Chief Secretary for Ireland—Henry E. Duke, (U.).

Lord Chancellor for Ireland—Sir Ignatius J. O'Brien, K. C., (L.).

#### Congress Opens

President Wilson's address to Congress, discussed editorially in last week's Independent, dealt principally with the uncompleted program of railroad legislation which he had urged upon Congress last summer, and measures embodying his recommendations will be the chief subjects of debate during the present session. The President will try to complete his railroad program during this session of Congress, which will end not later than March 4th, because the new Congress will be less strongly Democratic, and consequently less amenable to the wishes of the administration. Speaker Clark has urged the elimination of the usual fortnight holiday recess in order that Congress might devote the time to clearing rou-

Harding in Brooklyn Daily Eagle

#### RENOVATING

tine business from the calendar. On the other hand, the labor union lobby is using every effort to secure a postponement of action on railroad legislation. The railroad brotherhoods are at work upon an alternative program which will lessen the danger of strikes without involving compulsory arbitration in any form. The American Federation of Labor will support the railroad brotherhoods in opposing to the last all legislation tending to curtail the right to strike.

To hasten action on the administration program of railroad legislation, it is believed that the various parts of this program will be tacked on as amendments to a House bill now before the Senate to increase the membership of the Interstate Commerce Commission. This would make it possible for the desired legislation to be discussed and, if possible, passed as a unit with the least expenditure of time, whereas if each part of the program had to pass separately thru all the stages of enactment a little skilful obstruction might delay and so defeat the President's plans. Many independent bills dealing with the railroad question have already been introduced into Congress. One of the most radical of these, by Senator Underwood, of Alabama, would give the Interstate Commerce Commission the power to fix the wages and hours of labor of employees of railroads engaged in interstate traffic.

#### The Nation and the Market Basket

Much of the time of Congress will be taken up by discussions of the high cost of foodstuffs and of measures introduced to remedy the situation. Interest at present centers on Representative Fitzgerald's two embargo bills. One suspends the exportation of any farm products or manufactured foodstuffs for a year, the other empowers the President to prohibit exportation whenever he considers it to be in the public

interest. In both bills provision is made for the exportation of enough food to meet the needs of American citizens resident abroad or peoples made destitute as a result of the war. Another bill fathered by Mr. Fitzgerald makes unlawful the interstate transportation of articles of food held in cold storage unless marked with the date when first placed in cold storage, and limiting the maximum period of storage to ten months or, in the case of butter products, one year. A fourth bill abolishes the zone system in the parcels post so far as foodstuffs are concerned and admits such articles to the parcels post up to 150 pounds. Many other congressmen have introduced bills more or less similar to those proposed by Mr. Fitzgerald. Some of these provide for various kinds of food embargo, others for regulation of cold storage plants, still others for special commissions to investigate the whole question of high food prices.

While Congress is inventing legislative devices to reduce prices and housewives are seeking to attain the same end by reducing their purchases of expensive foods, the federal and state authorities are investigating the situation. Reports are being gathered by the Departments of Agriculture and of Commerce and laid before the President for his consideration, and the Department of Justice announces that federal grand juries in many of the larger cities will be established to summon and examine as witnesses railroad men, meat packers, coal dealers and middlemen handling all kinds of foods. Grand juries for this purpose were constituted first in New York City and Detroit. Many of the states have attempted similar investigations.

**The High Cost of Being Governed** The estimates of the expenses of the federal government for the fiscal year 1918, for which the present Congress will provide funds, reach the enormous total of \$1,268,715,834. To this must be added an appropriation of more than three hundred and twenty-five million

#### A WIDELY VERSED AMBASSADOR

The new United States Ambassador to The Hague, John Work Garrett, has been in the diplomatic service for fifteen years, and has represented the United States at Berlin, Rome, and Paris, and in Venezuela and Argentina. An additional qualification for his present appointment is Mr. Garrett's service eleven times as *chargé d'affaires ad interim* at The Hague. He succeeds Henry van Dyke

dollars for the postal service, which is covered by estimated postal revenue, and a sinking fund appropriation of over sixty million dollars toward the public debt. The largest element of increased expense is the ambitious military and naval program of the administration. The combined cost of maintaining and increasing the army and navy will probably amount in the end to over eight hundred million dollars. Most items of national expenditure show a heavy increase over last year's appropriations, but there is a decrease of ten millions in the appropriations for river and harbor improvements. The pension estimate also shows a slight decrease.

Such heavy appropriations might naturally awaken misgivings among representatives of economical constitu-

encies, and therefore champions of preparedness are now working to convince the public of the necessity of generous expenditure on the national defense. Even Secretary Daniels, at one time in his official career an opponent of naval expansion, took occasion in his annual report to warn the nation "against the danger that lies in a possible feeling on the part of our people that the navy has now been attended to, has been placed where it belongs, among the great navies of the world, and there is nothing further to be done." Rear Admirals Fiske and Edwards gave public endorsement to an address by Professor W. L. Cathcart before the American Society of Mechanical Engineers urging great increases in the expenditure upon naval bases in the Caribbean and the Pacific; and Rear Admirals Badger and Fletcher of the Navy's General Board spoke before the naval committee of the House of Representatives in favor of larger battleships. The annual report of Major General Scott on army affairs denounced the attempt to make a federalized national guard the main reliance of the nation and urged compulsory training as the only solution of American military problems. Chairman Chamberlain, of the Senate committee on military affairs has promised to try to secure the appointment of a sub-committee to hold public hearings on the question of universal military training.

**Chicago's New Traction Plans** The Chicago traction and subway commission has just issued a report advocating a nine year program of public transportation development which it is estimated will cost a hundred million dollars. The report favors the organization of a corporation whose franchise will supplant all existing franchises, the new corporation to have centralized control over all Chicago's surface, elevated and subway lines now or hereafter to be built. Control over the doings of this corporation will be exercised by the city thru a board of supervision and control, and

Carter in New York Evening Sun

GOING UP!

the profits accruing from the operation of the city's transit facilities will be divided between the city and the corporation. New construction will be carried on gradually, but one of the first steps will be the building of subway routes not only for rapid transit but also to carry underground much of the ordinary trolley car traffic which now congests certain streets.

**Railroad** President Ripley, of the **Atchison, Topeka & Santa Fe Railroad**, has issued salary bonuses amounting to two and three-quarter million dollars. Not a cent of this money will go to members of the four big railroad brotherhoods who are the beneficiaries of the Adamson eight-hour law. President Ripley was one of the bitterest opponents of the Adamson law when it was before Congress. In his opinion the law had placed the union men in a privileged position, and the object of the bonus was to enable unorganized labor to meet the increased cost of living as well as the organized brotherhoods. A new organization, the National Association of Railroad Employees, has been established to represent the interests of railroad men who are not affected by the Adamson law and to secure shorter hours and higher wages. Over five thousand railroad switchmen employed by thirteen railroads have laid before the board of arbitration selected under the Newlands act a demand for an eight-hour day which shall be guaranteed by the payment of time and a half wages to men compelled to work overtime. The switchmen and the railroads have completed their testimony before the arbitrators, and a decision is shortly expected.

Associate Justice Brandeis of the Supreme Court announced on December 4 the unanimous decision of the court dissolving an injunction against the enforcement of an order granting reduced rates to cities on the Pacific Coast. This injunction was secured in the lower courts on behalf of 182 inland towns and cities which contended

#### THE NEW WARDEN OF SING SING

The prison reform of Thomas Mott Osborne, former warden of the New York state prison and founder of the Mutual Welfare League there, will probably continue in modified form under his successor, William H. Moyer, recently warden of the Federal penitentiary in Atlanta, Georgia

that they were entitled to the privileges of coast terminals in the matter of transcontinental freight rates. The Supreme Court thus confirmed the action of the Interstate Commerce Commission and the contentions of the Federal Government.

The Interstate Commerce Commission is at present wrestling with the problem of the freight car shortage. Railroads in every part of the country have been instructed to turn over to their southern and western connections a percentage of box cars, loaded or empty, in excess of the number received. This will force a large number of cars to the West and the South, where the need is most urgent. Owing to heavy export shipments to Atlantic ports, the major lines of the East have on their tracks more than sixty thousand box cars from other parts of the country. In its annual report to Congress the Interstate Commerce Commission requested legislation empowering it to prescribe rules governing interchange of cars, return to owning roads, loading conditions on foreign roads and compensation for the use of cars.

**Villa Leaves Chihuahua** On December 3 the Carranzista forces under Generals Ozuna and Murguia entered Chihuahua City. Villa had previously evacuated the city and moved his army to the west to avoid a battle with government troops, who had been strengthened by reinforcements under General Murguia. Before leaving the city Villa's army burned and plundered much of it and massacred many of the foreign residents, especially the Chinese. General Trevino, on behalf of the Carranza Government, denied that any Americans or Europeans were killed during Villa's occupation, but this reassuring report lacks confirmation from other quarters. According to one report, two Americans and a German Vice-Consul lost their lives. Reports continue to reach the border of the killing of Americans in other parts of northern Mexico, such as Parral and Torreon. A number of the American residents of Chihuahua City escaped death by the aid of friendly Mexicans, who hid them when the insurgents captured the city.

The nature of Villa's future plans are a cause of much perplexity to the American army of occupation as well as to the Mexican Government. By the capture of Chihuahua City the insurgents not only gained much miscellaneous loot, but also replenished their diminishing supply of munitions of war. Military advices are that Villa now commands a force of about ten thousand men and that he captured from the Carranzistas several thousand rifles, a large number of machine guns and small cannon, and a plentiful supply of ammunition. Villa is supposed to be retreating before the forces of General Trevino, but he may swing back for a new and unexpected attack on Chihuahua City or strike at the American border. It will be remembered that his capture of Chihuahua City was the fruit of a feigned retreat which misled the defenders as to his intentions. Villa's troops have also abandoned the city of Parral, which had been held by them for more than a month.

THE TROOPS ON THE BORDER HOLD A GRAND REVIEW

On the field where Gen. Taylor won a victory in the Mexican War some 23,000 troopers of the National Guard are enlivening their watchful waiting by a formal parade

# BEATING GERMANY TO IT

BY SCOTT NEARING

PROFESSOR OF SOCIAL SCIENCE AT TOLEDO UNIVERSITY

**N**ATIONALISM is an idea—an ideal. In its origin the idea is social. Like the family, the clan and the tribe, the nation is built (theoretically) of a group of people with like interests—territorial, racial, linguistic, religious.

Should nationalism become the dominant ideal of the Twentieth Century the nation which most completely fulfils the ideals of nationalism would be the dominant nation of the century. If nationalism and the love of fatherland is to be the form which moral enthusiasm is to take, the nation that can succeed best in creating this standard and in maintaining it will be the culture center of the twentieth century.

What are the implications from this conclusion?

Germany is undoubtedly the most successful nation in the world at the present time. There is no group of people to whom "My country first" (Deutschland Uber Alles) means so much in terms of life.

Germany has been made a livable country. For half a century German statesmanship has been directed to the end of giving every German an interest in the Fatherland worth living for and therefore worth fighting for. Universal, effective education, living wages, social insurance, replanned and rebuilt cities, lessening disease and death rates, increasing opportunities for leisure and recreation, increasing opportunities for participation in public affairs, emphasis and reemphasis upon the social group—the family, the city, the nation—these and a hundred other influences have made Germany a good living place, and welded into a remarkable unity the conflicting economic, social, and political interests which exist in so many forms among the people of Germany.

Germany has outdistanced all of the countries of the old world in her provision for the German people. A series of reports by the British Board of Trade on the working and living conditions of workmen in France, Belgium, Germany and England, have made it quite evident that the advantage enjoyed by the German workingman was considerable. During the past twenty years Germany has been the acknowledged leader of Europe and, in many respects, of the world in her social legislation. Her only possible rivals have been Australasia and Belgium, and it might be said, with a considerable show of justice, that they followed, in the main, rather than led.

Even America, the land of opportunity, has been far outdistanced by Germany in the direction of social legislation. The provisions for state insurance; the regulation of dangerous trades; the prevention of industrial accidents; the control of disease; the improvement of city living places; the organization of education; the regulation of agriculture and industry; the control of public utilities; the conserva-

tion of resources—all have received more adequate and scientific treatment in Germany than in the vast majority of American cities and states. If the last forty years alone are considered, it must be apparent that the achievements of Germany in making the land a good living place for the common man have far outdistanced those of the United States.

There is an impression, erroneous to the last degree, that the Hohenzollern dynasty has done all of these things. Nothing could be farther from the truth. These things have been done by the German people. There has been a ruling family in Germany during the past half century. There has also been a powerful and aggressive group of Socialist parties that, at the outbreak of the war, commanded four million votes. The German people have been responsible for the transformation of Germany. No family, no class, can assume even a major share of the credit for these achievements.

**G**ERMAN unity and coherence are built upon the socializing of German life. The German nation was able to make its phenomenal showing in the great war because it stood together, as one man, for Germany—for the land that had been made into a home of the German people.

The point must not be overemphasized. There is the German bureaucracy, the German aristocracy—the Feudal upper classes that dominate in many directions—yet the fact remains that, on the whole, the ruling classes of Germany are little if any more autocratic than the ruling classes of England and the United States, while the German people feel that they have more of a stake in the country than do the people of either the United States or England.

German energy is phenomenal. She has a high birth rate which gave her the basis for a great degree of fecundity. Then, too, she is immensely productive in other lines—education, science, architecture, business, art, literature, music, poetry. It is absurd to speak and write as tho German energy had been directed to the production of engines of war. She has done that, to be sure, but she had accomplished many other things with equal intelligence and equal perseverance and zeal.

Measured in any direction, the fecundity of Germany is the marvel of the age. From her high birth rate, to her immense productivity in the field of industry, of science, of finance, of social organization, of education, of art, of architecture, of literature, of drama, of music, of philosophy, of military tactics, Germany has showed herself the most fecund of modern nations. She fairly bubbles over with ideas in every field of endeavor. It is not in one direction, but in all directions that her boundless energy and enthusiasm display them-

selves. This is not at all a matter of belief, but a statement of fact that is verified by an appeal to any of the many fields of modern activity.

**T**HUS there appears in Germany a reservoir, apparently inexhaustible, of moral enthusiasm, unifying power, and group energy that weld the nation into a coherent whole. Germany is German, thru and thru.

Germany has these characteristics of hub power—moral enthusiasm, unity, and group energy. But above all else, she is efficient. Her standards of industrial, social and educational activity have been beacon lights shining thru the later years of the nineteenth and the opening decade of the twentieth century.

Toward the end of the eighteenth century, Great Britain contributed the factory system to the world. It is impossible to overstate the significance and the importance of this step in human progress. The new method of production made possible the feeding of all the hungry, the clothing of all the naked, the housing of all the shelterless, and abundant leisure for every man, woman and child on earth.

Toward the end of the nineteenth century, Germany contributed the idea of efficiency to the world. Before another hundred years have elapsed, it will be possible to estimate, with some nicety, the full extent of that contribution. Even today, however, it is apparent that its value was surpassingly beyond any other single contribution of the nineteenth century.

German efficiency begins with the conservation of the human resources of the empire. The men and women of Germany are the German nation. Those who would preserve the integrity of the nation must begin with the nation-stuff—the people. Once that idea had secured a firm root in the minds of Germany's philosophers and statesmen, the work began.

Germany must conserve the German people. Sickness, accidents, trade diseases, congestion, bad housing, child labor, poverty—all shorten and weaken life. They therefore are a front attack on the German nation and they are dealt with accordingly. Germany has not solved all of the industrial and social problems—far from it—but she has gone to work as if she meant business, and with a success to which the whole world is willing to bear witness.

Then, Germany conserves her economic resources. Her agricultural land, minerals, forests, water power, rivers and harbors are the basis of her economic prosperity. Hence the infinite pains that have been taken to utilize them to the utmost. The German Government has stood behind industrial development. When individual initiative has sufficed, it has been let alone. When it wavered it has been encouraged and subsidized. When it failed, or where

it threatened the welfare of the German people it has been brushed aside and replaced by social action.

The public utilities are the arteries of national life. The railroads, telegraphs, electric light plants and street railways have all been made a part of the machinery of government. How else could public affairs be administered in the interest of the German people?

Education is an essential factor in modern life. Every effort has been made to place the German schools in a position of unchallenged supremacy. At the outbreak of the war, the classics, industrial training, the arts, and the sciences had all been made an integral part of a well rounded course of study.

Commerce is necessary to the disposal of the surplus wealth created in the modern system of industrial exploitation. A great merchant marine has been built up in the face of seemingly insuperable difficulties. It was the success of this German commercial policy, as much as anything else, that stung Great Britain into fierce rivalry.

Germany is not perfect—far from it. Viewed from the standpoint of pure democracy she has a long, weary way before her. So have all the nations of the earth. But note, that if nationalism is to be made the ideal of the twentieth century, as we are now striving earnestly to make it, Germany has all of the ear-marks of first grade, culture center quality.

One thing can stop the sweep of German supremacy thru the opening decades of the twentieth century—the power of a new idea. National solidarity in other nations will but increase the solidarity of the German people. Armies, navies, and preparedness will stimulate them to larger and larger endeavors, and inspire them to greater sacrifices. A new idea may undermine and destroy the whole superstructure of their nationalistic philosophy.

What is that idea?

Nothing more nor less than industrial democracy.

Privilege today has intrenched itself behind the lines of nationalism. Strengthen nationalism and you

strengthen the bulwarks of privilege. Cry patriotism, and you cry the slogan of loyalty to the exploiting class in every great country of the world, because it is this class that is at present in control of the government in every great nation, including Germany.

Privilege today is based on the control of the resources, tools and franchises of which modern industry is built. Democratize these special privileges—make them the possessions of the entire people and not of any special class—and you have strangled privilege in its lair.

Century after century has witnessed the steady gains of the democracy against privilege. Now the progress has been rapid, again it has proceeded at a snail's pace. The political revolutions of the eighteenth and early nineteenth centuries seemed for the moment to have put the democracy in full control of public affairs, but privilege found a new vantage ground in the industrial special privilege that grew up with capitalism.

**I**NDUSTRIAL democracy is the logical ideal of the twentieth century—the next concession to be won from privilege. The whole century may pass without any great gain being made. In that case the people of the age will be blind to their opportunities and false to their responsibilities.

Establish industrial democracy—take the control of all industry out of the hands of a special class and vest it in the people, and the last excuse for nationalism has been destroyed.

Here lies America's opportunity—to eliminate economic special privilege and industrial exploitation; to establish industrial democracy side by side with political democracy; to be the center of a new idea.

During the closing years of the eighteenth century the American colonies assumed a position of world leadership in overthrowing the divine right of kings and proclaiming political democracy. This record makes America the hope of the world. Her eighteenth and nineteenth century achievements in the upbuilding of political democracy give

her, of right, the first claim to the leadership of the twentieth century movement for the establishment of industrial democracy. America set the pace then; can she hold it now?

Can America take the lead? Can she win out against Germany? Nationally, no. She has neither the unity, nor the efficiency to make her successful as a nationalistic nation. Democratically, yes, if her people bend to the task with a will.

Let America continue on her present course—neither a nation nor a democracy; let her pile up her wealth and flaunt her riches; let her grub for profits and tear down her barns that she may build greater ones; let her steep her life in luxury, ease and dissipation; let her perpetuate the hideous exploitation of her wage earners and her less fortunate classes; let her build the palace beside the hovel; let her poverty grow with her riches; let her develop a class that owns and lives, without working, on the labor of others; let her follow along the path of ignorant, sensuous folly into this fools' paradise, and it will not require a Germany to shatter her greatness. America will consume herself like the fool who said in his heart—"There is no God." She may line her coasts with batteries, sow her waters with mines, cover her seas with men of war, and fill her camps with soldiers. Her treasuries may overflow with gold and her mills and factories with every precious and useful thing. If the soul of America is dead, America is no more. She has set the cup of hemlock to her own lips. Her fate is sealed.

America will not do this. She is too young; too enthusiastic; too optimistic; too vital. She will end her economic debauch of the past fifty years; cleanse the borders of her political garments; revitalize her institutions with new purpose, and go forward—toward what goal?

Nationalism? The odds are against her.

Industrial democracy? The future beckons to her; the world follows in her train.

Toledo, Ohio

## OLD CHAIRS FOR NEW

According to tradition, the "May-flower" had at least one chair on its manifest. It was the property of Governor Carver, and belonged with the turned chairs. . . .

Flemish chairs came next. Some of these were elaborately carved by hand. They introduced cane details. Some of the Flemish chairs were composite, and under the influence of Spanish, Portuguese and even Dutch chair makers a single chair would have a Spanish foot, an English underbrace and a back and bandy legs of Dutch conception. . . .

The Banister back chairs were popular from 1710 to 1720. They followed the cane chair in general style, with minor modifications. The slat-back used horizontal pieces in the place of the leather covered back, while the banister-back used upright posts or

pillars that were sometimes turned and again half turned. The most common chair during the first half of the eighteenth century was the slat-back with a rush seat. Three, four and five slats were used. Some of the slats were carved. . . .

Roundabout chairs find places in the inventories of 1738 and later, under various names. They are now known to collectors as "Corner Chairs." They range from chairs with the Dutch bandy-leg to those with the carved Chippendale leg, with claw-and-ball foot, as derived from Chinese decoration. . . .

Windsor chairs made their first appearance in this country about 1730, in Philadelphia. Advertisements of them abound in the newspapers up to 1800. These chairs were originally painted green, but individual owners

repainted them in various colors. There were also many varieties of the Windsor chair, including "Fan-back," "Comb-back," "High-back" and "Writing Chairs." Thomas Jefferson owned one of these last named chairs, and upon it he might easily have written the Declaration of Independence. Some Windsor chairs have straight spindles across the back, with a projection to act as a head rest. In others the curve of the back merges into the arms. . . .

Dutch chairs, Chippendale, Hepplewhite, Sheraton, Phyfe, Empire, "Fancy Chairs" and late mahogany chairs obtained popularity in the chronological order indicated. . . .

Old needlework was sometimes used in the upholstery of seventeenth century arm chairs.

# A MOTHER IN ENGLAND

BY HELEN PARRY EDEN

When I nurse my baby at night and my eyes are heavy with sleep  
All the woes of the war wake and come in to my bed:  
All the woes of the war wake in the dawn and weep.

And when surrounded by day I blow up the embers spread  
White on the hearth, with the bellows to comfort her feet at the blaze—  
Only the ache of my arms is appeased by the weight of her head.

As she lies on my lap, the fed mouth pacific, the eyes at gaze—  
Sapphires of wondering grey in the old washed-bone-colored shawl—  
Slowly the ashes return floating back on the slant sun's rays:

From the rafters they light on her soft-breathing robe like the ghost of a pall,  
On her head's new coif of innocent hair, on her lips apart,  
Everything sullied and dimmed by their ineluctable fall—

So the woes of the war settle again on my heart.

# THE SHORTENING DAY

BY MARY ALDEN HOPKINS

**W**E need not fear the eight-hour day. It is already here. A hundred years ago it started on its way. Soon after the beginning of the war it arrived. It has not harmed us. Instead it has benefited us.

Viewing the gradual shortening of the working day during the period of a century, we can see both the theory and the practical working more clearly than when our eyes are focused on the ups and downs of a decade or a year. When the tailor sat cross-legged on a bench and stitched his seams by hand, his day was lengthened at either end by candlelight. In contrast, consider the notice posted voluntarily by the Wholesale Clothiers' Association of Chicago, in their shops, affecting about eight thousand employees:

"Beginning December 1, 1916, 48 hours shall constitute a week's work in this shop. Time and a half will be paid for overtime."

Other trades show the same alteration. When the wagon maker cut axles with the axe and hammered out bolts at a forge he began work at dawn and finished by torchlight. Decidedly shorter is the eight-hour day of the Studebaker Corporation, granted in 1915 to between six and seven thousand men.

The miner in the English collieries used to eat and sleep in the mine. He seldom saw the light of day. I once read a Sunday-school story of a baby born and brought up in the coal mine. I suspect that was an exaggeration, but the idea couldn't even have been thought of under the present system. The United Mine Workers of America, thru conferences and agreements with mine owners, recently reduced the nine-hour day to eight hours for 170,000 miners in the anthracite coal regions of Pennsylvania. The bituminous coal miners of Utah secured the eight-hour day thru legislation way back in 1896. The bituminous coal miners of Illinois, Indiana,

Ohio, and Pennsylvania, gained it by strikes the following year.

Nearly all the trades which have not yet secured the eight-hour day approach their goal by continuous lopping off of the end of the day. A study of eighty-nine principal trades in forty-seven cities, conducted by the United States Bureau of Labor, showed a gradual shortening of hours between 1907 and 1914.

Our machinists woke up when European war orders gave the impetus to the munition plants. Automobile manufacturing, tool factories and like industries felt the stimulus. The suddenly increased demand for labor affected neighboring factories of all kinds. The machinists took advantage of the large amount of work on hand to demand the eight-hour day. About one hundred and fifty firms, chiefly in the eastern part of the country, conceded it during the last six months of 1915.

**W**HAT has happened to the output as the hours have decreased during the past hundred years? Has that decreased also? On the contrary. The output per man has increased. The tailor, the wagon maker, the miner, and the factory hand turn out more in the present short day than they did in the former long day.

Two reasons underlie this. First the improved machinery and time-saving schedules have speeded up work. The electrically driven sewing machine is faster than the hand needle. Machine mining has been introduced into coal mines. The steam engine and the spinning jenny have come to set men free.

The second reason is less clearly understood. It lies in the increased efficiency of the short hour man. A rested man works better than a tired man. A man who stops at the end of eight hours has more zip in him the next day than the ten-hour man. He works faster and

better. He makes fewer mistakes. He has fewer accidents. He is all-in-all a better workman. At least that is what the eight-hour employers tell us. Do you notice that the clamor against the eight-hour day is never from the employers who have tried it, but all from the employers who don't want to change to it?

The testimony of employers who have led the shorter working day movement during the past century bears witness to the relation between short hours and efficiency. The change began in Europe. When the textile mills of England were running from twelve to sixteen hours a day, Robert Owen ran his ten hours a day, with the same machinery, and made as much money as did his long-hour rivals. The sixteen-hour men said that he wasn't "practical" and called him a "reformer." But the very names of those men are forgotten today. The long-hour, low-wage employers of the United States are applying the same terms to Henry Ford. But Henry Ford with his eight-hour day, his five dollar minimum wage, and his low-priced car counts his income by millions. Old ways are not always best.

A cotton mill manager who took over a thirteen-hour cotton mill, told his experience to the Massachusetts Bureau of Statistics back in 1881. He said:

"Soon after I took charge I persuaded the rest of the directors to allow me to reduce the hours to eleven. Before this the weekly product of the mills had been 90,000 yards of print cloths. After it, with the same machinery, the weekly product rose to 120,000 yards.

"Now granting, as should doubtless be done, that a part of that increase was due to improved management, yet it is clear that this improvement could not have been made nearly so effective without the improved physical conditions which so great a reduction of hours afforded."

lightly leaping thirty-five years, we find Mr. Frederick Hazard, president of the Solvay Process Company, at Syracuse, New York, telling a similar experience to the National Consumers' League. The great difference is that the president of this huge chemical company does not stand for the eleven hours of the past, but comes straight out for the eight hour shift. The work of his concern is somewhat similar to blast furnace work. It is a continuous industry where the plant must be kept up to its maximum efficiency twenty-four hours a day; it involves handling material by the tons and hundreds of tons, and dealing with fatigue on a large scale. The product can be measured accurately and the cost computed to a penny.

"In my first experience in studying the business with which I afterwards became identified," said Mr. Hazard, "I went abroad to the foreign works, and the system there was eleven hours' work for day time, thirteen hours at night. It is a twenty-four hour job, a three hundred and sixty-five day job; it doesn't stop any more than a blast furnace. The method of changing shift, in order that one man might not be compelled indefinitely to work the thirteen hours at night, was for him to continue and work eleven hours in the day time, making twenty-four hours of continuous work. Meantime his partner had had a rest, and he came on comparatively fresh, much more so, certainly, than the man who had just finished twenty-four hours.

"I personally made that change a great many times, in the course of my apprenticeship, and I can assure you that for the last few hours my work was not worth what I got paid, or what I would have got paid. It was not worth anything, and my observation has led me to the belief that most of the men who worked on the basis were equally worthless with myself before the end of their long turn. It is also noticeable that accidents, to the work and to the workmen, were more frequent on the twenty-four hour shift than at any other time.

"After my experience abroad, coming home, we established the industry, which has since grown, and we followed the practice of the foreigners, because we didn't know any better, for a few years. We found also, on inquiry, that it was a very common practice in this country to work on the same basis, eleven hours in the day and thirteen hours at night, and that practically continues to this day in some industries and in some localities.

"We came to the conclusion, however, twenty-three years ago, that it would be possible to establish three shifts of eight hours each and thereby much improve the results both for the corporation and for the workman. . . .

"Comparing the results attained in the first two years after making the change, we find that there was some increase in cost, total cost, per unit of product handled. It was not increase of cost in material. There was of course an increase in wages, since we decided

that we could not ask the men to materially reduce their income. Since that time, wages per unit of time, per hour, have increased very greatly. *In spite of that increase, the total time consumed has decreased so that the result in cost is less than it was before the eight-hour change was made.*"

**A**LL kinds of work that exist, as nearly as I can estimate, have fitted eight-hour experimenting—excepting two. The annals of farming and of domestic service offer no testimony for or against.

"It can't be done on the farm," I am told. The inflection intimates that the question is absurd. Some day the experiment will be tried. Some day an "unpractical reformer" with, say, two of those conscienceless hired men who leave harness straps unbuckled and snooze among the corn stalks—this reformer farmer will divide the sixteen-hour day into two eight-hour shifts. One shiftless hired soul will work from four to twelve and the other from twelve to eight. Will he accomplish less—or more? An extra hurry call to the hayfield at shower time will receive overtime pay. How do you think the account sheets will balance at the end of the season? Is the farm so different from everything else in the work line?

Domestic service, the other long-day occupation, is going out of existence. Domestic servants are no longer to be had at any price. Altho some people optimistically prophesy that the war will restock our kitchens with widows and orphans, I believe that the maid-by-the-month is almost extinct. Maybe we have killed her with long hours. Her place is being filled by the woman-by-the-hour. We are paying her at a higher rate, employing her shorter periods, and paying her car-fare also. And that's what we get by our obstinate refusal to standardize domestic service!

**T**HE railroads say that they are different, too. They say, as nearly as I can gather from newspaper reading and listening to agitated conversations in restaurants and street cars, that when God made the first day, he made it ten hours long, and on that basis the railroads arranged their schedules. They say, as nearly as I can comprehend, that an engine that stands still can be speeded up to do ten hours' work in eight hours, but that an engine that hauls a freight train can't possibly go any faster. It seems to me, soaked as I am in the eight-hour day excitements of the past, recorded in the British Sessional Papers and our own State Labor Bureaus' reports, that railroad directors talk just the way the factory owners and the mine owners used to talk. The work may be different, but the arguments are the same.

General benefit to society from the short work day is one of the points made in "The Case for the Shorter Work Day." This brief was compiled by Louis D. Brandeis, before his appointment to the Supreme Court, assisted by Josephine Goldmark, publication secretary of the National Consumers'

League. The brief was presented in the Oregon case to uphold before our Supreme Court the constitutionality of the Oregon limitation of hours of labor. The many recent changes in the court prevented their handing down a decision and the case will be reargued later. This thousand-page book contains practically all the information which all the countries have accumulated thru medical and laboratory research, thru economic and social studies, and thru practical business experiments. It supports the argument that short hours have a good effect upon general morals and will promote temperance. It points out the benefit to citizenship in giving the foreign workman leisure to acclimate himself to American institutions and to study political problems. It draws attention to the relation between short hours and regularity of employment and emphasizes the need of uniform restriction for justice to competing employers. As I read how much better we behave ourselves when we live under comfortable conditions, with time to play and time to sleep, I wonder if there was not a flaw in the old theory that starvation makes geniuses and overwork, saints. And wasn't that theory always more favorably received by those who hadn't tried it?

Much of the testimony which I have quoted is taken from past experience. Let me bring it up to date, turn the calendar pages to the very present, by reprinting, in part, what each of the employees of the Victor Talking Machine Company, Camden, New Jersey, found in his pay envelope on October 1, 1915: "Why the Victor Talking Machine Company Changed to the Eight-Hour Day!

"The Victor Talking Machine Company has changed from the standard working hours to the eight-hour basis, without reduction in wages, for the reason that, after a thoro investigation into the conditions in our manufacturing departments, the directors have concluded it was the right thing to do and the right time to do it. . . . There had been no demand for such a change on the part of the employees of the company, who number 7500.

"The change will reduce the company's profits on the present volume of business about \$1,000,000 for the first year. The company expects that it can, by certain adjustments and improvements, gradually restore its profits to normal, but the changes necessary to accomplish this result are expected to consume about three years. . . .

"The company believes that the new schedule of shorter hours will result in the production of goods of a higher grade than was possible under the old schedule. The company believes that the shortening of the hours will greatly reduce the nervous strain which is so evident in modern industrial organization. . . ."

Somehow, after reading that proclamation, with its extremely modern note, I feel that the Victor Talking Machine management knows the road it's traveling—the road to success.

# A NEW SPORT

BY CHARLES S. WARD

SECRETARY OF THE INTERNATIONAL COMMITTEE OF THE Y. M. C. A.

THREE hundred citizens gathered at luncheon in the banquet hall of a great hotel. There was evidence of intense interest, even supprest excitement. These men were mature business men, the "leading men" of their town, and such do not readily yield to their emotions. The time was one of anxious interest, for these men had been concentrating for a week, with great abandon, on a common civic object and the result was at stake. They had set out to raise in ten days a million dollars for the Young Men's Christian Association of the city. For eight days they had been lunching in groups, reporting progress daily, each group in competition with the other groups, as eager at this civic "game" as the college boy at his athletics. The seventh day's report showed a total of \$947,000 subscribed and they had decided to close at noon on the ninth day, ahead of schedule time.

Could they do this record-breaking thing? How big a triumph could they record? These were the absorbing questions.

When finally it was known that Minneapolis had made a world's record in popular subscriptions with \$1,152,500 in eight and one-half days, the enthusiasm burst its orderly bounds and wild pandemonium reigned for a time.

Then there was speechmaking, the crowd's usual method of tiring itself out, and the president of the Civic and Commerce Association said: "I never saw the city so united over any one project in my entire thirty years here."

One team captain, whose name is known wherever flour is sold, went on record as follows: "What might have appeared to some a hard and possibly disagreeable task proved, to me at least, one of the most enjoyable periods it has been my privilege to experience. I did not begin to realize what a pleasure it was going to be to every one of the three hundred workers connected with it."

This is modern money-raising by the intensive campaign. A few years ago such an experience was unknown. In the same city in which the above occurred, the Y. M. C. A. building was once under foreclosure, and it took months of desperate effort to raise a few thousand dollars to save it. The Civil War veteran who led that movement said it tired him more than the forced marches of the Vicksburg campaign.

The "sordid grind" of money raising for philanthropic work has long been the chief drawback of that work. It has not been wholly removed, but, with education and organization, is being gradually reduced. The intensive campaign (sometimes called "whirlwind" or "short term") has taken the grind out of many large enterprizes. Introduced less than a dozen years ago in the Young Men's Christian Association, it has been steadily developed and im-

CHAMPION IN THE MONEY-RAISING GAME  
More than \$60,000,000 has been raised for Y. M. C. A. buildings since 1905 by means of Mr. Ward's campaign plan

proved, and for ten years its almost exclusive use in the large enterprizes of these virile organizations has given great stimulus to their growth. In a single decade the building and endowment property of the Association has increased from \$35,000,000 to \$100,000,000 net.

Recently the intensive campaign has come into general use by hospitals, colleges and universities and other institutions that have a general appeal for public support, and many millions have been thus added to their property, endowments and facilities for service.

What are the chief fundamentals of success in raising money by the intensive campaign?

Four words stand out conspicuously: First, "Concentration." Business men are willing to work for the public good, but it is hard for them to find the time. They like nothing better than a proposal to do a big job quickly. By concentration on a week or ten days, the loyal work of strong men is secured and the attention of a large community centered on a single community enterprize. Thus more money can be raised in six days than in six years. A big Cincinnati merchant said at first that he could not possibly neglect his business for the Young Men's Christian Association campaign. Afterward he said that he did not "neglect" it, he "abandoned" it for ten days, and found it a good thing for the business. His subordinates had shown their ability, and now he is

able to absent himself for needed vacations. Business men sometimes stick so close to their desks that they fail to give their associates a chance to develop their capacities.

Second, "Organization." The purpose of organization is to distribute responsibility, stimulate activity and prevent duplication of effort. Teams of ten have proven most efficacious in this work—usually grouped into committees of one hundred. A general chairman is chosen, who selects and secures ten leading, active business men as team leaders or "captains," each of whom secures and manages a team of ten men including himself. This system is capable of indefinite extension. In the recent \$4,000,000 campaign in New York one thousand workers were used, ten committees of 100 each, subdivided into 100 teams of ten. Philadelphia similarly used 500 workers in a million dollar campaign. The one requirement of all team workers is that they attend the daily meetings at luncheon, and do such work as they are able, selecting the names of those whom they are to solicit for pledges from the campaign lists, so as not to duplicate the work of others. This is a most important detail of the organization.

The third word, most fundamental of all, is "Sacrifice." Men are encouraged to see the necessity of giving up some of their own pleasure and convenience for the public good, with the inevitable result of such sacrifice: namely, their final testimony that they themselves have benefited far more than the public by their sacrifices.

Fourth, "Publicity." It would be difficult, if not impossible, to carry thru these philanthropic campaigns without publicity, and in many cases the winning of public confidence thru the agency of the press and other means of publicity is the greatest of all the benefits of a money-raising campaign. The liberality of the newspapers has been a constant wonder. Millions of dollars would not pay for the space freely given.

Men need stimulus to philanthropic endeavor and philanthropic giving. Few men give as much as would be good for them. There is no work of higher patriotism than this work of stimulating the gifts of the people to the common good.

This work can best be done by leaders and representatives of the people themselves, rather than by professional solicitors. The expert is useful only as counselor and organizer.

So in recent years we have seen many thousands of the nation's strongest men volunteering for patriotic community service, securing the gifts of millions for the public good, and making a real sport of it, by the modern scientific methods of the intensive campaign.

New York City

# THE AMERICAN BOY

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

"**W**HO would you like to be, if you were not yourself?"

I put this question lately to a group of healthy, bright boys, their ages from nine to twenty years. One said "Rockefeller." Another said "Wilson." Another said "Roosevelt." Another said "Ford." Another said "Edison." Another said "Ty Cobb." Another said "Buffalo Bill."

Every boy named a leader—a man grown famous by doing great work of the kind the boy most admired. Every boy who is live and sound has leadership in his mind as the hope, admiration, ambition of his career.

Then I put another question. "What sort of fellow would you rather *not* be—of all the kinds of fellows you know?" Among the answers were these: "A quitter; a loser; a coward; a cheat; a sick man; a bonehead; a bum." Now all these fellows are the opposites of leaders. They are the laggards of life, the lazy ones who don't know the rules, or won't play by the rules—and are thrown out of the game!

If you are a good ball player, look back for a moment and think how you learned the game. You picked out the best player you could find, and you "got next" to him. You watched his plays, you studied his moves, you asked his advice, you did as he said, you tried to do as he did. Then you mastered the rules of the game from an official book, you read everything you could locate in print about baseball, you compared the records of the Big League players, you resolved to make a few records yourself! And then you practised, in season and out of season, rain or shine, every day, as long as you could see the ball. Isn't the game of life worth your study?

I know what a fellow needs, to be a winner in athletics. For at eighteen I had the tennis championship of our college, and held the trophy till graduation. But I began training for tennis leadership at twelve years of age. Every boy of twelve and over should be training for some kind of leadership. The youth who never wins waited too long.

We are often told that life is a game. It is—the greatest, finest, hardest game ever learned. But we are not told how to play the game. We have to get this knowledge for ourselves, with many a bruise, defeat and headache the price of the knowledge. Almost any man of fifty would tell you, if he is honest, that he has lost thousands of dollars, some of the best years of his life, many opportunities for self advancement and public service, just because no one trained him for the real struggles in the game of destiny.

The Great War has turned the whole

world into a field of industrial competition. The American boy today has a chance for supremacy that his father never dreamed of. Million-dollar corporations are outbidding each other for the trained man—the man who spent his youth getting ready for a big job, a big salary, and the big satisfaction of doing big things. There are now more \$5000 positions than there were \$2000 places when your father began his career. Which of these worth-while jobs are you aiming for, studying for, working for?

**S**OME of the new lines of increased opportunity are these: Commercial law, traffic management, scientific agriculture, modern salesmanship, secretarial work, industrial chemistry, factory growth, city government, efficiency engineering, banking and finance, business literature. These occupations, and many others, hold out rewards from 20 to 100 per cent greater than when your father was a boy. How are you preparing to get and keep a commanding place, high among the leaders of men?

The training your father had won't do for you. Competition is now so keen that only the boy who has done things, learned things, dared things, beyond reach of most boys finds the way open to the really big achievements. Ordinary fellows can't even get a job with a company that leads—you must have merit standing out all over you, to claim the notice of a modern employer. And if you plan to be a doctor, lawyer, teacher or preacher, you may expect to starve the first year, unless you have already built a personality of unique strength and wisdom. Wonderful chances are waiting for the boy who is ready—and hopeless failures are ahead of the boy who is not.

In life, as in baseball, the first thing is to learn from the leaders; the second is to master the rules; the third is to study the records, and surpass them! I have looked into the lives of the immortal men of history; I have talked with professional and business leaders of today; I have watched young men rise from nothing to eminence and power; and from all these sources I have gathered a set of rules for boys to follow who expect to become the winners of the world. The object of these rules is to train your physical, mental and moral muscle for the game of real life. Each rule has a direct bearing on your success—whether you see just how, or not. If you apply yourself to these rules with half the earnestness you put on a baseball match, the power you develop will start you on a career as much ahead of most young men as a Big League champion

is ahead of a backwoods ball player who never saw a professional game.

A level-headed, lion-hearted boy is the only kind who can follow out these rules. They will take all the grit you have, but will yield such rewards in money, helpfulness and happiness that your effort will seem trivial by comparison. We suggest that you cut the rules out, paste on a large sheet of cardboard, hang in your room, and read often.

A BOY'S RULES FOR LEADERSHIP IN LIFE.

1. *Be a leader now.* Don't wait for mature manhood. You can never reach the top of anything by waiting. You must think, plan, work. Start now. There is at least one game, one sport, one class, one occupation or industry, where you can be a winner if you want to. Find the study, and the recreation, in which you were born to excel. Take the lead, and hold it. Every boy was made to be a champion somewhere. Be the best in something. You can, if you will. Don't be satisfied till you are.

2. *Select a hero, and study him.* What great man of history do you admire most? Who has achieved the highest success of the men you know personally? Which leader in the trade or profession of your choice stands out preëminent? Locate these first three men of might. Obtain their photographs if possible. Read all available literature about them. Learn just what they have done, and how and why they did it. Compare the hardships and privations of their boyhood with your own; remember that a handicap in youth is the best help a man ever had if he learns how to use it right; and if poverty or ignorance or weakness or misfortune or unhappiness or heredity is your handicap—overcome it and make it speed you on to your goal as big men have done before you!

3. *Learn what you are good for.* Don't begin a life work by chance—that means failure. Get three or four of the new books on vocational guidance—you can club together with a half dozen boys and render the cost for each very little. Apply all the tests, make all the experiments you can, to discover which trade, profession or industry means development of your chief talents and powers. Avoid the perils of the "blind alley" occupation; ask an expert in vocational or industrial education what these perils are, and discuss the matter fully with your parents and your favorite teacher.

4. *Master a trade before you are twenty.* Thousands of boys have done this, and guaranteed success in advance. You are going to be a professional man? All the more reason why you should know a trade, for the average professional man is a failure on

the practical side, where human nature, system and finance are concerned; if you learn a trade as a boy, you will be twice the man in your profession. By home study of correspondence courses, by systematic work after school and in the long summer vacation, or by school attendance on the shop-study plan, you can get a grip on a trade or business, earn real money, and feel like a real man, while other fellows your age are still childishly playing with toys and begging pennies from their Dad. If you can't get industrial training either at home or at school, raise a rumpus until you can. The Editor of the National Association of Manufacturers says that half the boys of the United States are thrown out in the world, without being taught how to earn a living; and he maintains that a boy should start learning a trade when but eight years old, so as to be able, if necessary, to support himself by the time he is fourteen. Judge your education by this expert opinion, and see how much practical knowledge you are getting.

5. *Plan to be at college two years or more.* Of the prominent men listed by "Who's Who in America," 69 per cent had college training. So your chance to succeed is apparently twice as good if you are college-bred. Many colleges, however, do not educate a boy—they only putty him out with a gob of book-learning, and gloss him over with a daub of social polish. Hunt a college

that will make a man of you; and apply thoro, scientific tests in advance of enrolment, that your college work may be grounded on efficiency.

6. *Know just how strong and healthy you are.* Get a boy's physical measurements from a gymnasium director, an athlete or a physician. Compare each with your own, bring up your weak points to the normal. Be examined by a new-school physician at least once a year, and follow the habits of life he recommends for the maximum of health and vigor. Do you sit straight? Do you sleep in a perfectly ventilated room? Do you drink enough pure water? Has your blood enough iron? Are your eyes and teeth sound? Is your heart action faultless? Can your lungs hold as many cubic inches of air as they ought to? Are you ready and steady of nerve? Put a lot of questions like these to yourself, and answer them right by the aid of an expert.

7. *Take a sensible view of athletes and athletics.* Most boys regard prize athletes as foolishly as girls do matinee idols. Thoughts mold actions, hence you cannot afford to think wrong. Why worship a man for his mere physique? The reason for admiring a boxer, a runner, a weight-lifter or a ball-player is that he destroyed a collection of bad habits or chronic mistakes and weaknesses, in getting fit to be a champion. A victory of mind always precedes a victory of muscle.

8. *Join a well equipped boys' club.* There is no finer help to your enjoyment of life, and your physical, mental, social and moral evolution. A modern boys' club has a gymnasium, a shower bath, a library, a game room, a music entertainment and lecture system, a trade school, a debating forum, a summer camp, and other good features, all for about ten cents a month dues from each member. If no such club exists in your locality, resolve to organize one; ask us how to proceed. About 5,000,000 boys in the United States—or 66 per cent of the total, are "underprivileged"; they lack certain aids to a healthy life and productive career; the modern boys' club offers these advantages; two-thirds of your friends, needing the club, would thank you for literature on its method, scope and management.

9. *Eat for strength of nerve, brain, muscle.* Do you know that the majority of men are undersized, weak or ailing somewhere, dull-minded and short-lived because of wrong eating habits in early youth? Get a book on food chemistry, another on mastication, another on physical culture diet; learn to feed yourself as rationally as you would a pet dog. Among the best foods to build a strong body and brain are these: Eggs, milk, wheat, corn, oats, barley, fish and fowl, peas, beans, nuts, apples, raisins, prunes, most dried fruits, nearly all fresh vegetables, thick soups,

## A BOY'S EFFICIENCY TEST

BY WHICH ANY BOY FROM EIGHT TO EIGHTEEN YEARS  
OF AGE CAN MEASURE HIS FITNESS FOR LEADERSHIP

**DIRECTIONS.** First read Mr. Purinton's article "The American Boy." Then grade yourself on the following questions. Where answer is Yes, write 4 in space opposite. Where answer is No, leave space blank. Where answer is partial affirmative, write numeral under 4 that you consider honest percentage. Find your grade by adding numerals. It should be 80 or over. If it is not, locate your chief problem and send letter of inquiry, stating difficulty and desire, to Mr. Purinton, care Independent Efficiency Service, 119 West Fortieth Street, New York. Watch mails of Efficiency Question Box in The Independent for your answer; kindly be patient, as letters must be answered in turn.

1. Are you the best in at least one game, and at least one study? .....
2. Do you know your great life work, from vocational guidance books or consultations? .....
3. Are all your physical measurements up to standard for your age and height? .....
4. Have you read two or more books on food science? .....
5. Can you swim, skate, box, and do hard gymnasium stunts? .....
6. Did you ever hunt a job for yourself,—and secure it? .....
7. Will you master a trade before you are twenty, on your present plan of education? .....
8. Are you going to a college that you know can train you for real life? .....
9. Do you earn money regularly, and keep a bank account of your own? .....
10. Do you know how to save money? .....
11. Are you expert with garden tools, a carpenter kit, a camera, an engineering outfit? .....
12. Have you examined at least three boys' magazines, and do you take one? .....
13. Is the list of books you read endorsed by officials of a national boys' club? .....
14. Do you consider yourself old enough to study personal efficiency? .....
15. Are you a member of a local boys' club with national affiliations? .....
16. Can you play a musical instrument so well that both you and the neighbors enjoy it? .....
17. Have you daily home work to do, helping your mother or father? .....
18. Are you acquainted with the early lives of the four men you admire most? .....
19. Have you studied literature of four correspondence schools on your chosen work? .....
20. Is your best "pal" one of your parents, whom you are willing to tell everything? .....
21. Have you a moral backbone? .....
22. Is your language always clean enough to use in a church? .....
23. When a boy says coarse things about sex, do you make him shut up? .....
24. Are you kind, courteous, thoughtful, truthful? .....
25. Have you rendered a public service that won praise from high officials? .....

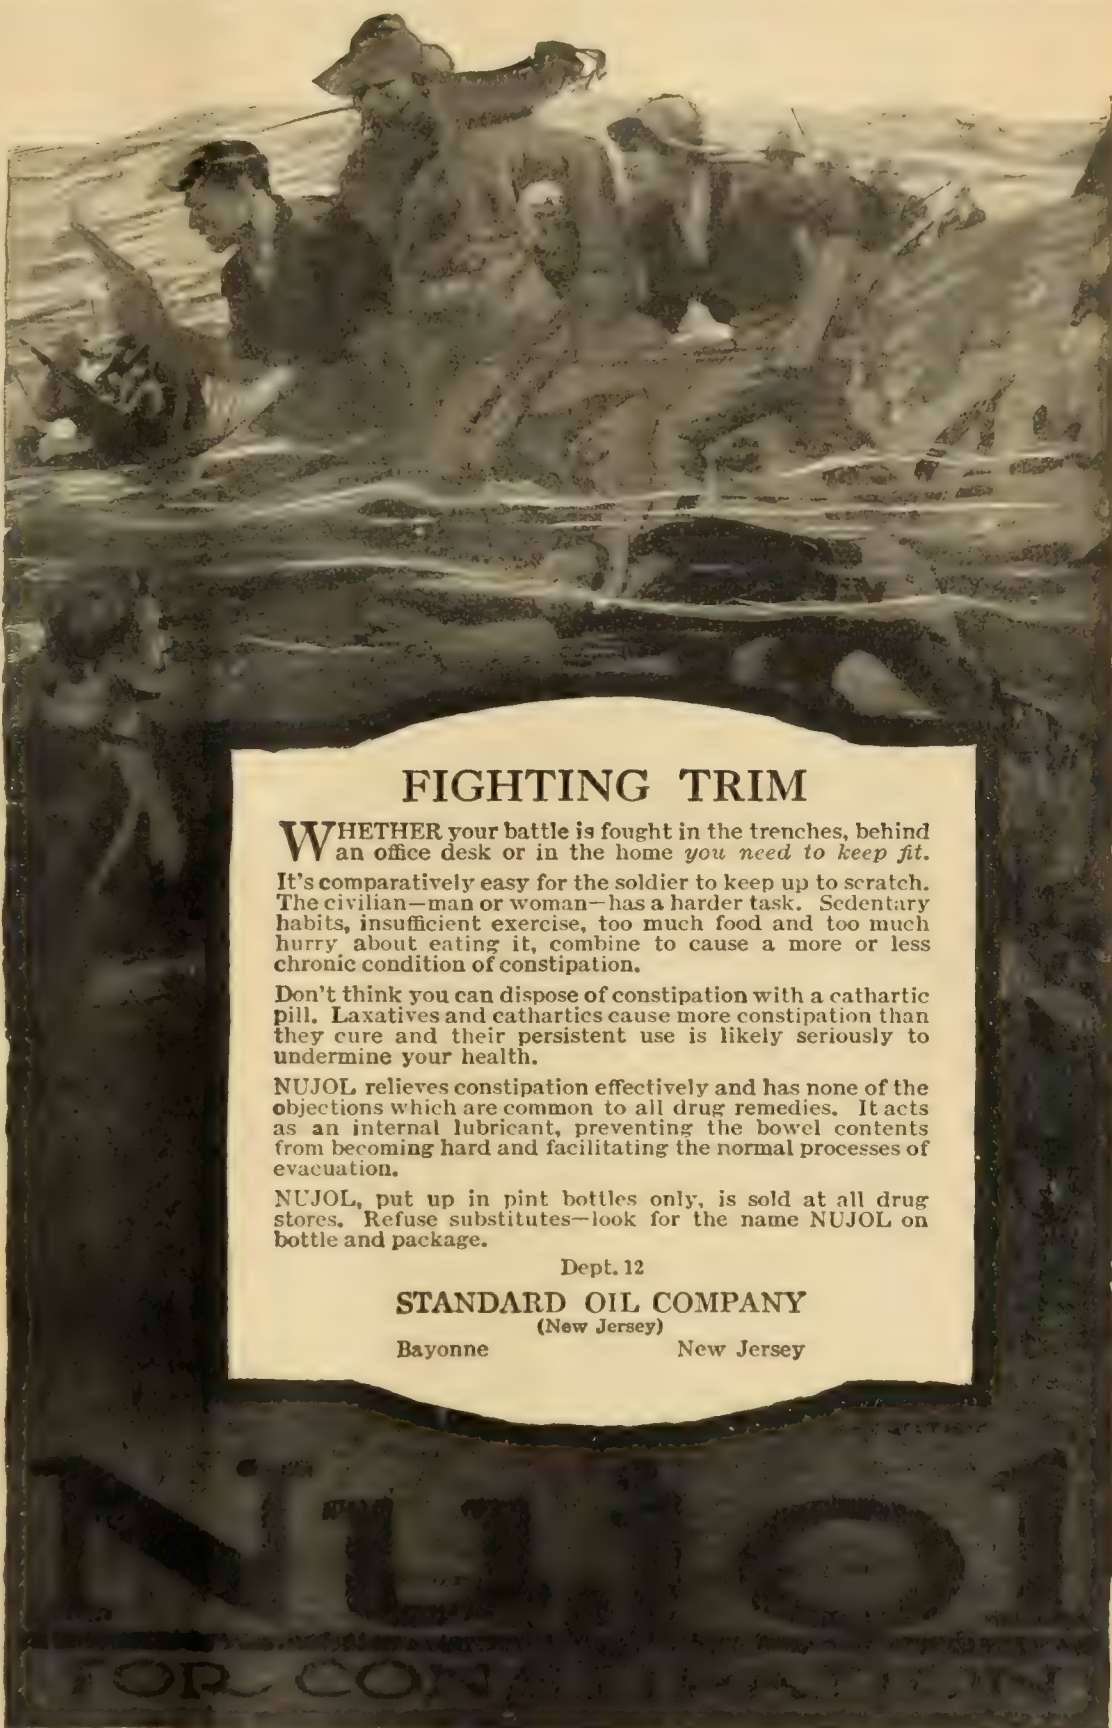

cocoa and chocolate, simple desserts like custards and puddings, most fresh fruits and salads in season.

10. *Earn your own spending money.* If you are over ten years of age, it is weak, thoughtless, babyish for you to beg or take money from your parents excepting for the bare necessities—food, clothing, shelter, schooling. A very small boy, or a sick boy, or a little girl, might do this. But a manly, healthy boy won't! You can earn from fifty cents a week up to several dollars, by working after school and on Saturday. Thousands of boys are doing this—and many of them not so bright as you are. How? By selling papers, running errands, weeding lawns, cutting grass, collecting garbage, copying addresses, operating office machines, raising vegetables, doing odd jobs at home, helping the neighbors in various ways, building a subscription list, acting as clerk, selling things from house to house. If you never earned real money, and want to know how, ask a Boy Scout, or an official of a Boys' Federated Club.

11. *Use your head and hands together.* Don't imagine education is mere book-learning. Education is knowing, respecting, utilizing and developing yourself. Put your body and brain to work on the sort of fun that brings efficiency. Plant a garden. Make and sell box furniture. Fix up a home gymnasium. Do experiments in mechanical, electrical or chemical engineering (details on request). Build an aeroplane. Study photography, enter the picture contests of boys' magazines. Become a wireless operator, and talk thru the air to your chums all around. Buy a tent, go camping in the woods or your back yard, learn how Indians live, and what they know about nature. Get a scientific tool-kit, plan carpenter jobs around the house.

12. *Start now to become a good citizen, a leader in the community.* Chiefs of police, mayors, and other city officials declare that organized groups of boys are now doing things for the public that grown men could not do. Among these patriotic and civic deeds are preventing fires, planting trees, painting hydrants, cleaning sidewalks, protecting parks, destroying insects, conserving pure water supply, helping in playgrounds, reporting unsanitary conditions, removing ugly signs, taking flowers to hospitals, gathering old clothes for the poor, acting as ushers at public meetings, cooperating in good roads campaigns, testing street lights, giving out health literature, fighting forest fires, maintaining squads of boy police, arranging for local celebrations, backing up the juvenile court, serving on relief committees of the S. P. C. A. How many of these things did you ever do? How many could you do for the commonwealth, and learn citizenship, earn the good opinion of your elders, train yourself in efficiency, and supply yourself with enjoyment, all at the same time? Skill, service and responsibility are the first three things to make a man successful. The boy who learns them before he enters active life will be twice the man for his early effort.

## FIGHTING TRIM

**W**HETHER your battle is fought in the trenches, behind an office desk or in the home you need to keep fit.

It's comparatively easy for the soldier to keep up to scratch. The civilian—man or woman—has a harder task. Sedentary habits, insufficient exercise, too much food and too much hurry about eating it, combine to cause a more or less chronic condition of constipation.

Don't think you can dispose of constipation with a cathartic pill. Laxatives and cathartics cause more constipation than they cure and their persistent use is likely seriously to undermine your health.

NUJOL relieves constipation effectively and has none of the objections which are common to all drug remedies. It acts as an internal lubricant, preventing the bowel contents from becoming hard and facilitating the normal processes of evacuation.

NUJOL, put up in pint bottles only, is sold at all drug stores. Refuse substitutes—look for the name NUJOL on bottle and package.

# Business Efficiency for America

## A Twelve Months' Campaign to Be Conducted During 1917 by The Independent-Harper's Weekly

Efficiency is the watchword of the hour. Never before has the necessity for individual, business and national efficiency for the United States been so apparent or so real. The Independent-Harper's Weekly announces a twelve months' campaign for Business Efficiency in America to be conducted during 1917. This program will embrace twelve articles on Personal Efficiency by Edward Earle Purinton, twelve editorials on Masters of Efficiency and twelve articles on broad aspects of Efficiency by members of the National Institute of Efficiency.

## The Independent-Harper's Weekly Efficiency Service

Just two years ago The Independent inaugurated its Efficiency Service and appointed Mr. Edward Earle Purinton its Director of Efficiency. To the important work which The Independent set out to accomplish Mr. Purinton contributed the rich results of fourteen years' study and preparation in learning how to increase human health, energy, productiveness and happiness.

In the two years just past, with his articles and personal counsel to our readers, Mr. Purinton has given the results of his experience to the advantage and satisfaction of many thousands of readers in every state in the Union. Mr. Purinton came to The Independent a world famous authority on Efficiency. He had been teacher, editor, lecturer, hygienist, psychologist, social service leader, efficiency engineer and intimate counsellor for men and women in every walk of life. His articles for The Independent were the first for any periodical. He writes for The Independent-Harper's Weekly *exclusively*. His best known previous work,

"The Triumph of the Man Who Acts," has been read throughout the world. His works have gained more than a million readers. His help has been sought in every state in the Union and in twenty foreign countries.

Mr. Purinton's great audience includes bankers, business and professional men, educators, manufacturers, railroad executives and heads of million-dollar corporations. Thousands of business organizations have already ordered Mr. Purinton's books, and his articles in The Independent, for their friends, patrons, clients, and employes.

Mr. Purinton will now enter upon the most important work of his career. As a part of The Independent's program during 1917 for Business Efficiency in America, Mr. Purinton's twelve articles on the Efficiency of the Individual will carry a message of physical, mental, financial, social and moral efficiency to every reader of The Independent. These articles should make every red-blooded man, from sixteen to sixty, of more value to himself, his firm, his family and his community.

---

# Mr. Purinton's Twelve Articles for 1917

## Some Things I Have Learned From You. (January 15)

Mr. Purinton's message to Independent readers after two years of intimate relationship with them as Director of The Independent Efficiency Service, and as counsellor in questions of personal efficiency, business, health, home life and happiness.

## Three Days in a Big Shop. (February 19)

What Mr. Purinton learned in a three days' visit to the greatest factory of its kind in the world. Also some of the things he taught the factory owners and the workers. A new chart for the factory owner.

## A Day at the Office. (March 19)

An article for the business executive or general manager. His daily program. A formula for getting the most out of the business day with the minimum of fatigue or waste of time and energy. A new chart for establishing the executive's business day on an efficient basis.

## The Job Higher Up. (April 16)

An inspiring article for the man who works for someone else. Mr. Purinton will present a plan which shows the way to swift promotion for the man who masters business fundamentals and intelligently studies the work of the job higher up while he is doing his own work. For the man in any business who is creating a bigger job for himself. For the man who is reaching for the higher position while filling his present position well. With Mr. Purinton's new promotion chart.

## Something to Sell. (May 21)

An article for every one whose success depends on the marketing of goods or services. Mr. Purinton will present some striking suggestions which give a new meaning and scope to what we call salesmanship. A chart of efficient marketing.

## Training for Efficiency. (June 18)

An article pointing out how to study one's self, and analyze one's abilities, and map out one's opportunities. How to study efficiency in its fundamental relation to the individual. A new study chart for The Independent's "school of efficiency."

## Three-Dimension Efficiency. (July 16)

The business man's triple existence—home life, street and social life, business life. How to keep these three in balance and proportion. How the man's habit of home and social life are reflected in his business success. A new chart for arriving at one's percentage of efficiency in three dimensions.

## Efficient Buying. (August 20)

The underlying principles of making purchases advantageously. The buyer in business and in private life. Mr. Purinton has a plan to present which should be worth many dollars to the man or woman who puts his principles into actual practice. A new chart for efficient purchasing.

## Professional Efficiency. (September 17)

What business efficiency means to every man in professional life. An article for the doctor, lawyer, clergyman, engineer, architect or any other professional man whose services are his stock in trade. With a new chart for self examination by the professional man.

## The Manufacturers' Problem. (October 15)

The big and broader aspects of manufacturing from the view-point of the owner or executive. Efficient marketing, something greater than the mere making of the product. Competition, publicity, good will, trade conditions and institutional efficiency. A new chart for the efficient manufacturer.

## The Best Office I Ever Saw. (November 19)

Mr. Purinton will tell just why it was the best office, according to his standards. How the work was handled. The equipment. The human element. Departmental relations. Authority. Military accountability. Short cuts. Elimination of waste energy and time. The right worker in the right place. A new chart for determining the efficiency and productiveness of any office.

## Organization in Business. (December 17)

The greatest requisite of all. The part of the individual in the big business machine. Mr. Purinton will here present the result of his personal study of over 500 efficiency methods and systems in Europe and America and his acquaintance with psychological and hygienic authorities, corporation heads, social service experts and efficiency engineers. A chart for determining the efficiency of any organization.

## Twelve Articles by Leading Members of the National Institute of Efficiency

The National Institute of Efficiency, which chose The Independent-Harper's Weekly as its official organ, has joined with The Independent-Harper's Weekly to make its program of Efficiency for America in 1917, broad and far-reaching. Twelve prominent members of the Institute will present in The Independent-Harper's Weekly their views on important phases of the most vital subject which concerns this country and its citizens during the coming year. Some of the articles are already arranged for. The complete program for 1917 will be announced at an early date.

### Masters of Efficiency

Twelve editorials to be published by The Independent-Harper's Weekly in the twelve Efficiency Numbers of 1917.

### The Question Box

Personal consultation by mail with the Director of The Independent Harper's Weekly Efficiency Service. Mr. Purinton will answer any questions regarding the intimate problems of the individual—as to personal efficiency, health, home life, business, or happiness. There is no charge for this service.

### Plan and Purchase Department

A free Service conducted by The Independent-Harper's Weekly for business concerns or individuals who seek advice regarding efficient equipment for offices, factories, or business buildings. Conducted in association with the National Institute of Efficiency.

### News of Efficiency

The monthly department of the National Institute of Efficiency published in the twelve Efficiency Numbers of The Independent-Harper's Weekly.

## The Independent-Harper's Weekly

## TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, business, or otherwise, the best routes, large and small; the best routes to reach them, and the cost, time by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

## The GLEN SPRINGS

WATKINS, N.Y.  
ON SENECA LAKE  
Wm E. Löffingwell, Prop.  
OPEN ALL THE YEAR

A Mineral Springs HEALTH RESORT and HOTEL, known as THE AMERICAN NAUHEIM  
In Private Park with miles of graded walks for Oertel hill climbing.

THE ONLY PLACE IN AMERICA WHERE THE NAUHEIM BATHS ARE GIVEN WITH A NATURAL BRINE  
**THE BATHS** are directly connected with the Hotel and complete in all appointments for  
*Hydrotherapy, Electrotherapy and Mechanotherapy.*

The Bathing Springs are similar to the waters of Bad Nauheim, in the proportions of Calcium Chloride and Sodium Chloride, but are about five times as strong. The Radium Emanation from Brine Spring No. 1 averages 68 Mache Units per liter of water and is due to Radium Salts in solution.

Unsurpassed advantages for the treatment of Heart, Circulatory, Kidney, Nutritional and Nervous Disorders; Rheumatism, Gout and Obesity.

WINTER CONDITIONS FOR TAKING THE "CURE" OR FOR REST AND RECUPERATION ARE ESPECIALLY DESIRABLE  
Our Illustrated Booklets will be Mailed on Request

### THE CONFIDENCE

that no disturbing incident will mar the pleasure of your trip makes travel on a

**Raymond-Whitcomb Tour**  
an ideal vacation.

**South America:** Land of the remarkable Inca civilization, of stupendous mountains and limitless undeveloped resources. The one ideal way to visit this wonderful continent and be free from the worries of custom houses, foreign languages and the perpetual difficulties of getting accommodations in a strange land is with one of our small parties. Departures Dec. 30; Jan. 13, 31; Feb. 10, 24, and Mar. 14.

**South Sea Islands and Australasia:** Fascinating new tours out of the ordinary routes of travel, including Hawaii, Samoa, Fiji, New Zealand, Australia, Rarotonga and Tahiti. Leaving Mar. 7 and Mar. 13.

**Also Tours to California and Hawaii, Japan and China, Nassau and Florida, and two luxurious cruises to the West Indies, Sailing Feb. 10 and Feb. 24.**

Send for Booklet Desired.

**RAYMOND & WHITCOMB CO.**

## MOTOR PROGRESS

By

John Chapman Hilder

WHENEVER a man asks me whether I think he could profitably use motor vehicles in his business, I am reminded of a venerable story about a certain English squire. It is so old that it seems pardonable to quote it here, since it must date back beyond the memory of even the oldest inhabitant. The squire affirmed that he liked brandy with his dinner on only two occasions—when duck was served, and when it wasn't. And so I tell the man who wants to know whether he ought to use trucks, that he ought to use them only under two conditions: if he has too much business for his present equipment, or if he hasn't enough.

That may seem paradoxical. But it is 98 per cent sound.

For the truck—used generically so as to include delivery cars and trailers—not only speeds up delivery and haulage systems, but it also widens their scope.

TAKE the case of a certain retail merchant in a city not far from New York. The city in question had a widely extended suburban district. It was surrounded by a sort of chain of small towns, each too far from the other to make separate deliveries profitable. The merchant realized one day that in these small outlying towns lay a splendid market. The problem was merely to find a way of taking goods out to them. He knew that if he could solve that, he would have little difficulty in building up a good trade with the townspeople. He realized also that he could get the cream of this trade if he acted quickly, because none of his competitors made deliveries to these towns.

So he divided the territory into zones. Then he bought a truck for each zone. He figured that one of the trucks could complete the circuit of one zone and touch every town therein twice a week. And he planned to have the other truck visit the towns of the more concentrated zone every other day, or three times a week.

The program for the twice-a-week truck was, starting, say, on a Monday, somewhat as follows:

Monday, make four towns and spend the night at the fourth.

Tuesday, make four more towns and spend the night at the eighth.

Wednesday, make three more towns, arriving home Wednesday afternoon.

He made definite arrangements with garages at the towns where the truck was to stop over night, and required the driver to report each night by long-distance.

## CUBA, A WINTER PARADISE

Title of a beautifully illustrated 64 page booklet telling you all about the enchanting island of Cuba sent on receipt of 3 cents postage.

UNITED RAILWAYS OF HAVANA

Frank Roberts, G. P. A.

Suite 1119

42 Broadway, New York

The other truck started out Monday morning and returned to the store Tuesday night, going out again Wednesday morning.

By vigorous circularizing of residents in the towns served by this motor delivery system, the merchant built up an almost unbelievably profitable trade. A large part of this was mail order business. People like the idea of regular deliveries from a metropolitan store, and as this particular merchant had a first-class reputation for honest values coupled with fair prices, they were glad to avail themselves of the opportunity of buying from him.

Here is an instance of where trucks actually created profitable business that would never have come without their help.

It was quite some time before this merchant's competitors rubbed the dust out of their eyes and followed his example. The result was that he got such a lead on them with respect to this out-of-town business that, altho they have since instituted similar systems of their own, he has more of the patronage than all the rest combined.

I HAVE not yet mentioned two important features of this wide-awake business man's delivery system. First, he used great care in choosing drivers for his trucks. He knew that, besides being an efficient driver-mechanic, each man would have to be something of a salesman, which means that he would have to be intelligent, courteous, neat in speech and appearance and, above all, strictly sober at all times. It was within the power of the driver to hold customers or lose them—in fact, not alone to hold customers, but to make new ones by giving such a good impression that customers would recommend the service to their friends. The merchant paid his drivers well. He gave them bonuses based on the records they made, thereby affording them an additional incentive to take more interest in their work.

The second feature lay in the advertising value of the trucks themselves, which were painted a distinctive color and bore the name of the store together with a sentence descriptive of the system.

Needless to say, the aforesaid merchant made each driver submit an exact report of every cent spent for gasoline, oil and other supplies while on the road. In this way he was able to tell how much the service was costing him, and by striking an average cost per trip was provided with a reasonably dependable check on the condition of the trucks as indicated by their performances. The trucks were carefully inspected after each trip and all adjustments and repairs made at once. And, mark ye well, lubricants were used without stint.

All this goes to show that you should never be sure you don't need a motor vehicle in your business. It shows likewise the inestimable value of emulating the noble redskin by keeping an ear to the ground so as to be always a jump or two ahead of the enemy.

# Virginia Hot Springs

Spend the Winter Months at Virginia Hot Springs, the one spot in all America where "a cure" can be taken just as comfortably as in the Spring, Summer or Fall.

The inestimable benefits of the healing waters (naturally heated 106°) have won international recognition for Virginia Hot Springs as one of the world's most famous resorts where the climate, scenic beauty and general surroundings are unsurpassed.

The completely equipped modern Bath House, connected with the Hotel by an enclosed sunlighted viaduct—the Spout Bath, famous for Gout, Rheumatism, Nervous diseases, Sciatica, etc.—the exceptional medical attention and the opportunity for absolute rest, materially enhance the value of "the cure."

Riding and driving over delightful mountain trails, Golfing on one of the sportiest courses in America and a variety of other sports give an added zest to outdoor recreation.

The well known Homestead standard of equipment and service maintained throughout the year.

## The Homestead Book

graphically illustrates and describes the many charms of this ideal winter resort and fully dilates upon the therapeutic values of the famous waters. Copies upon request.

## Who's boss in your office anyway?

All right, then it is strictly up to you if you continue to pay out good money—and waste time—for having your letters written *twice*—once in shorthand and once on the typewriter.

You are doing it with your eyes wide open. You can't blame a bit of the waste and extravagance of the shorthand system on anyone else. You are boss. You pay the bills. Yet you go along talking about efficiency, and neglecting the one biggest factor of convenience-and-time-and-money-saving ever devised for you. When it only needs a nod of your head to find out how to do what thousands of other business men do; have your letters written *once*, on the typewriter—have them written better and more accurately—and at least a third less in cost.

To say nothing of a personal convenience in dictation greater than you ever dreamed of. It's about time you dictated to The Dictaphone.

Reach for your telephone and call The Dictaphone, and arrange for a demonstration on your own work. If you do not find that name in the book, write to

In this story I have referred briefly to care in the choice of drivers. This is an important topic. It deserves, and will be accorded, an entire article all by itself. The bonus system is another topic of great importance. Truck users seem to hold quite widely divergent views regarding the desirability of giving bonuses and the bases on which they should be awarded. For your information we will have a symposium of truck owners' opinions on this subject in an early issue.

**A**T a recent meeting of the Motor Truck Association of Philadelphia, several business men said things which ought to be given wide publicity among the ranks of their fellow business men thruout the country. They show what the men who know think of the value of motor trucks in business and how they use them. Here are a few of these opinions, as reported in *The Commercial Car Journal*:

"Four times the amount of work can be performed with a motor truck as with a horse van, and the saving is one not only of time, but of money. The trouble is that the average buyer or driver doesn't know how to treat a motor truck and fails to get anything like the proper amount of wear out of one."—F. M. Miller, of the North Broad Street Storage Company.

"A good truck driver is a rare find and is worth his weight in gold to his employer. It is rare, indeed, to find brains driving a motor truck," said E. H. Frees, superintendent of the truck department of the Adams Express Company, "and that is the reason motor trucks last only half as long as they should." Mr. Frees declared that many truck users made the mistake of attempting to use three-ton trucks where five-ton were needed, and the consequence was overloading and more expense for repairs.

Charles L. Huff, president of the Huff Paper Company, said in part:

"True it is that one cannot get at the exact cost of the delivery of his goods by trucks, in comparison with teams. So many things enter into the calculation—trade increases—prices may not be the same—and I really do not know what it would cost us now to have only teams. But trucks have become such a necessity that no comparisons are attempted by us. I would think it just as advisable to do away with typewriting machines in the office as I would to do away with trucks with which to deliver my merchandise."

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While *The Independent* cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product. Address Motor Editor, *The Independent*, 119 West 40th Street, N. Y. C.

# Insurance

Conducted by

W. E. UNDERWOOD

## SOCIAL INSURANCE

Strenuous efforts will be made by individuals and associations representing, or claiming to represent, the industrial classes of our population during the legislative season commencing after the first of next year to secure in as many states as possible the enactment of laws providing for what is called social insurance. As I understand its advocates, social insurance will eventually include compensation for injured and sick workmen, medical attention, indemnities against unemployment and old-age pensions. The broad outline of the scheme contemplates the accumulation of funds for the purposes indicated by fixed contributions assessed against employers, employees and the state.

The validity of workmen's compensation laws, now in force in thirty-two states, is a subject of present controversy before the Supreme Court of the United States. If that tribunal shall pronounce against the laws, it is reasonable to suppose that a wider departure from our fundamental principles, such as would be a law establishing social insurance, will not be approved.

The promoters of social insurance seem determined that the system, if established, shall not be operated by private companies. Labor interests demand not only that the participation by private companies be interdicted but that the business be monopolized by the state. If the plan is permissible under our laws, that is to say, is in harmony with the provisions of the Federal Constitution, and if it becomes a monopoly of the states in which it is operated, the prospects of its success are not bright. Insurance seems to be a business which does not adapt itself to governmental operation. It is entirely reasonable to believe that what one set of capable men can do, another set of capable men can duplicate; and that, therefore a business can be as efficiently conducted in a government building by civil servants as in a building owned by an insurance company and manned by private citizens. Perhaps politics is the disintegrating ingredient in the combination. That there is one, is certain, for I can recall no governmental insurance scheme that has been a success.

C. R. P., Wadhams, New York.—The Connecticut General Life Insurance Company, organized in 1865, has \$460,000 capital and, as of January 1, 1916, assets of \$16,232,628, with a net surplus of \$1,269,954. It is an old line company, skillfully and economically managed, and thoroughly reliable. The only criticism I should make is that it sells both participating and non-participating policies. It is my judgment that a life company should confine itself to one or the other. The company's Continuous Income policy is a good one.

How Big a Man Are  
You in the Mail?

Examine Your Own Letterhead

# CONSTRUCTION BOND

WHEN a sheet of paper is all of you a man can see or feel—just how do you impress him? Do your letters crackle with importance and subtly suggest the substantial standing of your firm?

Mark this: Today's conditions in the paper industry emphasize your opportunity to make your business stationery outstandingly impressive. Many firms have stooped to shoddy paper—to "save" a tenth of a cent per letter. Many once good papers have been shorn of quality to find a market.

But Construction Bond, with its honestly maintained quality today, gives you multiplied advantage—it now meets so little real quality competition in the mail.

Make a note now to improve your business stationery. Write us for latest letterhead suggestions and the names of the stationers in your locality who carry Construction Bond in stock and produce fine stationery upon it.

W. E. WROE & CO., 200 EAST ILLINOIS STREET, CHICAGO

Look for this watermark in the stationery of firms of recognized importance. You will find it frequently.

CONSTRUCTION

## WEEDING OUT YOUR INVESTMENTS

Many of our readers may hold securities which have a questionable value or which are not suitable to their individual requirements.

Investments should be sifted occasionally, eliminating those which have little intrinsic value and purchasing those having a sound investment standing and a good future.

The services of our Investment Department are offered to those of our readers who may not be satisfied with their present investments.

An article on this subject by our financial editor, Luigi Criscuolo, appeared in The Independent of December fourth.

## Could You Fill His Shoes?

Suppose a good job were open where you work. Could you fill it? Could you jump right in and make good? Or would the boss have to pass you up because you lacked training?

Don't take chances on being promoted. If you want a job that pays good money, get ready for it.

Pick out the job you want in the work you like best. Then start *right now* to get, through the International Correspondence Schools, the training that will prepare you to hold it.

Thousands of men have advanced through I. C. S. training to the very jobs they wanted. What these men have done you can do. All the I. C. S. asks is the chance to help you. No matter where you live, the I. C. S. will come to you and train you in your spare time.

The job you want is within your reach. I. C. S. training will win it for you. The thing to do now is to make your start. Here's the coupon—mark and mail it now.

Dowe—Is that a horse pistol?  
 Nutt—No, it's a Colt.—*Cornell Widow.*

"Is this gun working now?"  
 "No, sir. It's discharged."—*Harvard Lampoon.*

That girl looks like Helen Black.  
 She wouldn't look any better in another color.—*New Idea.*

"Is there an opening here for a bright, energetic young man?"  
 "Yes; an' close it as you go out."—*Judge.*

A slump in the pawnbroking business is reported. Apparently, nowadays, only statesmen have pledges to redeem.—*London Opinion.*

"Is this Somerville 227?"  
 "No."  
 "Then why did you answer?"—*Harvard Lampoon.*

Battery A—I hear we are going to carry our pistols in our belts.  
 Battery B—Just my luck I wear suspenders.—*Sun Dial.*

Some of the bishops having ordered less bell-ringing during the war; the bells, it is understood, have patriotically promised to do as they are tolled.—*Passing Show.*

"The Germans are very illogical."  
 "Qu'est ce que?"  
 "They always speak of a gentleman as a Herr instead of a him!"—*Cornell Widow.*

Dyner—Say, waiter, your advertisement said: "Dinner a dollar a plate," and my bill is thirteen dollars.

Waiter—But you used thirteen plates.—*Stanford Chaparral.*

Unlucky Motorist (having killed the lady's pet puppy)—Madam, I will replace the animal.

Indignant Owner—Sir, you flatter yourself.—*London Opinion.*

Barbour—You seem warm; have you been exercising?

Waterman—Yes, indeed; I went to the mutes' dance and swung dumb belles around all evening.—*Michigan Gargoyle.*

Willis—Just think of it! Those Spanish hidalgos would go three thousand miles on a galleon!

Gillis—Nonsense. You can't believe half you read about those foreign cars.—*Life.*

Patience—There was a time in her life she could have married nearly anybody she pleased.

Patrice—And yet she never married?  
 "Never, you see she couldn't please anybody."—*Yonkers Statesman.*

Assistant—I have a poem from a man serving a five years' sentence in the penitentiary.

The Editor—Print it with a foot note explaining the circumstances. It may serve as a warning to other poets.—*Puck.*

Prim Old Girl (at art museum)—And this, I presume, is Cleopatra, the Theda Bara of her day?

English Caretaker—On the contrary, madame, this is the Venus de Milo. Quite armless, madame, quite armless.—*Sun Dial.*

### IMAGISTE LOVE LINES

I love my lady with a deep purple love;  
 She fascinates me like a fly  
 Struggling in a pot of glue.  
 Her eyes are gray, like twin ash-cans,  
 Just emptied, about which still hovers  
 A dusty mist.  
 Her disposition is as bright as a ten cent shine,  
 Yet her kisses are tender and goulashy.  
 I love my lady with a deep purple love.  
 —*Columbia Jester.*

## THE NEW BOOKS

### GRANDMOTHER'S PLATES

Beside James's work on "Indian Blankets" and Hall's on "Hand Woven Coverlets" should stand *The Blue-China Book*, by Ada Walker Camehl. This is a fascinating subject to the American collector, and save for a thin volume containing a check list and some short descriptions, this is the only full treatment of this most interesting ware.

A hundred years ago almost every household in the United States used the picture decorated china that, at once after the Revolution, the astute Staffordshire and Liverpool potters began to make for the American market. English artists journeyed over the northern states making drawings of scenery and buildings for the English factories, and soon our shops were full of quaint printed dishes, printed in dark and light blue, mauve, gray, brown and pink. The ware is coarse, but the designs are always decorative, often beautiful and always ingenious and interesting for their historical and social significance.

There are chapters, also, on the Dr. Syntax and Wilkie plates, willow ware and the White House china. The book is as delightful in type and illustration as it is in topic.

*The Blue-China Book*, by A. W. Camehl. E. P. Dutton & Co. \$5.

### AN ENGLISHMAN'S LINCOLN

One of the best traits of the English is their readiness to admit and correct past errors. The righteousness of the American Revolution is as much a dogma in modern England as in the United States, and the British aristocracy, which was strongly in sympathy with the Confederacy almost to the end of the American Civil War, has publicly and frequently repented of its blindness to the true issues involved in that struggle. *Abraham Lincoln*, by Lord Charnwood, is an excellent example of the present British attitude to the Civil War period. Lord Charnwood is an ardent, tho not indiscriminating, admirer of Lincoln and his sympathies are wholly with the North. No American will be displeased with the tone of the book except, perhaps, a few partisans of the "lost cause."

Lord Charnwood's study of Lincoln adds no details not long familiar to Americans from other biographies. Indeed, the book aims rather to retell the story of Lincoln for the British public than to make an original contribution to history; it relies thruout on materials gathered by earlier historians and biographers. It would, therefore, be irrelevant to criticize the book from the point of view of scholarship or to search it minutely for occasional errors, such as calling Edward Everett, Charles Everett (p. 152). It is more important that the author's judgment on the events with which he deals is always

balanced, moderate and intelligent. The most original part of the book and the part in which the author seems to take the greatest personal interest is the discussion of military administration and particularly of the working of conscription both in the Federal Union and in the Confederacy.

*Abraham Lincoln*, by Lord Charnwood. Henry Holt & Co. \$1.75.

### WIT AND HUMOR

*The Pleasures of an Absentee Landlord* is Samuel McChord Crothers' new volume. Mr. Crothers wears seven-leagued boots and, stepping across the centuries from Thomas Fuller's "Worthies" to "Spoon River," wars and plagues and contemporary criticism of the assertive sort are stepped over, imperialism, snobbery, bigotry, intolerance, "the eternal necessity of war" are ground under the heel, in a casual footfall.

He is, of course, a sprite, an elf, full of a corrective mischief most easy to endure. He has theories on the man-made giant or "leviathan," government, a thing necessary but of value only as a guide to happiness for its makers, and constructive ideas toward peace that is other than theoretic. His comments on the "irresponsible" reading of history; and his plea for an education looking toward happiness and the "rounded" man we would like to prescribe for professors! His "literary clinic," including Marcus Aurelius, Epictetus, Pliny, Plato, Trollope, Thackeray and the Bible, his acid for Byron and modern "shockers," his poetic temperament (once he gets up on that abandoned New Hampshire farmstead), his easy, near-conversational but finely literary style, and especially his saneness, playful assuredness, and instinct for a real joke, make Mr. Crothers considerably more than an entertaining essayist.

*The Pleasures of an Absentee Landlord*, by S. M. Crothers. Houghton, Mifflin Company. \$1.25.

### MORE RECENT BOOKS

Alice Stone Blackwell has rendered into English verse a group of *Armenian Poems*. Love songs, cradle songs, songs of patriotism and of exile; these date from the tenth century to the present and show the inner life of this now ruthlessly slaughtered people. All proceeds go to the Armenian Relief Funds. (Robert Chambers, Ford Building, Boston. \$1.50.)

Julia D. Dragounis, whose "Haremlik" is so fine a study of Turkish women, has written a novel, *A Man of Athens*, that will not disappoint those who know her earlier work. It gives a living picture of life in Greece before and at the opening of the Balkan War, and is a thoroly sane and charming love story. (Houghton, Mifflin Company. \$1.50.)

Hendrik Willem Van Loon can tell a true tale in as graphic words as ever romance commands, and his *Golden Book of the Dutch Navigators* is adventure, travel, economic and political history what you will, but first of all it is mighty

Luxurious resort hotels a few hours apart.

The blue Pacific, high Sierras and your favorite out-door sport.

No better way to go to California, than "Santa Fe all the way."

Four trains every day.

Santa Fe de-Luxe weekly in winter. Fred Harvey meal service.

En route visit Grand Canyon and Petrified Forest in Arizona—Hawaii afterwards.

Booklets of trains and trip upon request.

W. J. Black, Pass. Traf. Mgr.  
A. T. & S. F. Ry.,  
1080 Railway Exch., Chicago

42 key fully visible typewriter  
to your friends and let them see  
where it excels any \$100  
typewriter, if by doing  
it—and other small things—  
you could easily have  
one to keep as your own?  
Then by post card or letter  
simply say, "Send Particulars."  
**WOODSTOCK TYPEWRITER CO., Dept D838 Chicago, Ill.**

entertaining reading, save for the tragic  
pages that recount disaster or shameful  
encounters with native island tribes, when  
it is more than entertaining. (The Century  
Company, \$2.50.)

The home life of English folk trans-  
planted to South Africa is delightfully de-  
scribed in essays *From the Heart of the  
Veld*, by Madeline Alston. In spirit as well  
as in setting this life is curiously different  
from that of English country life, and, de-  
spite kaffirs and tigers, curiously like that  
of America. (John Lane Company, \$1.25.)

In modern novels villains are seldom  
outrageous enough to be fascinating. But  
the villain in Henry Oyen's book, *The  
Snow-Burner*, is a physical and mental  
superman with a heart black with bad-  
ness. Mr. Oyen sees to it, however, that  
right always conquers gloriously, with the  
appropriate histrionic antics and back-  
ground. (G. H. Doran Company, \$1.25.)

One new face appears among the *Por-  
traits of Women*, drawn by Gamaliel Brad-  
ford. Jane Austin, de Guerin, Sevigné,  
Duffand and the others are familiar to the  
essayists, tho these studies are perhaps un-  
commonly understanding. But Mrs. Pepys  
is a newcomer, and the chase for her thru  
the pages of her husband's diaries is a truly  
entertaining exercise. (Houghton, Mifflin  
Company, \$2.50.)

A new writer, L. C. Carlsen, has a real  
story to tell in *The Taming of Calinga*, a  
tale of the Philippines. A young chief of  
the mountain tribes, a "head hunter," goes  
out when the "fire bush" blooms to prove  
his prowess and win "the comeliest maid."  
His strange religious traditions and aspira-  
tions and his experiences with white men  
engage our interest. (E. P. Dutton & Co.,  
\$1.35.)

Qualified by years of intimate life across  
the channel Lawrence Jerrold writes with  
knowledge and entire sympathy of *France,  
Her People and Her Spirit*. The chapters  
on the Church, Labor Organizations, Po-  
litical Parties and the *Bourgeoisie* are espe-  
cially enlightening while all are interest-  
ing, and the cover tempts to purchase  
whatever the text. (Indianapolis: Bobbs-  
Merrill Company, \$3.)

### THESE UNITED STATES

Allen Benson, in spicy English, at-  
tacks what he considers the war scare now  
among us. *Inviting War to America* is a  
clever book, with keen sarcasm for graft,  
conflict of experts, munition makers, and  
law makers. (Huebsch, \$1.)

A striking study of the emigrant, the  
treatment accorded to him and the results  
to the country is to be had in Frances A.  
Kellor's *Straight America*. The chapter on  
preparedness is superficial, but the rest of  
the book makes unmistakably clear some  
of our shamefully neglected duties. (The  
Macmillan Company, 50 cents.)

The new edition of Professor Stanwood's  
authoritative *History of the Presidency*  
contains additional matter covering the  
years from 1897 to 1916—accounts of the  
rise of the Progressive movement, the Re-  
publican split of 1912, the various presi-  
dential conventions and candidates and  
platforms of 1916. (2 vols. Houghton,  
Mifflin Company, \$4.50.)

The argument for preparedness could  
hardly be stated more vividly than in Wil-  
liam Freeman's *Awake U. S. A.* Our pre-  
sent and proper means of defense are shown  
and proposed plans analyzed. The argu-  
ment is based chiefly on statistics, and com-  
parative diagrams of the armaments of  
Germany, Japan, Great Britain. (G. H.  
Doran Company, \$2.)

Dr. M. M. Miller, editor of the inval-  
uable series, "Great Debates of American  
History," has now in *American Debates*,  
two volumes, made a study of twenty-five  
great controversies from 1761 to 1861.  
These trace the changes in popular  
thought; the personalities of the debaters;  
and illustrate by excerpts the trend of  
arguments. A new approach to the events in  
question and especially useful to students  
of argumentation. (G. P. Putnam Sons, \$4.)

### DIVIDENDS

INCORPORATED 1827

## The Brooklyn Savings Bank

PIERREPONT and CLINTON STREETS  
New Entrance 300 Fulton St.

INTEREST AT THE RATE OF

**4 Per Cent. Per Annum**

per cent. (1%) from the net earnings of the  
Company on both Common and Preferred Stocks,  
payable January 2nd, 1917, to stockholders of  
record at the close of business on December 15th,  
1916. Checks will be mailed.

WALTER G. HENDERSON, Treasurer.

## THE MARKET PLACE

### IN THE STOCK MARKET

During the first week of December the movement of prices on the New York Stock Exchange, and also the volume of business, were affected by high interest rates on call loans, but there was no large average gain or loss. The net results of the preceding week had been an advance for railroad stocks, due mainly to expectations concerning the President's message, with losses for nearly all the war order industrials, partly on account of the Federal Reserve Board's disapproval of investment in British Exchequer bills, and of rumors of new submarine complications. The interest rate on demand loans had risen to 6½ per cent on the 1st, the highest figures for two years. On Monday, the 4th, this rate advanced to 15 per cent, and prices at the close of the day showed an average net loss for transactions involving 1,342,000 shares. Such a rate imposes some restraint upon brokers and buyers. The effect of it was clearly seen on the following day, when the total, 892,000 shares, fell below 1,000,000 for the first time since October 16. The recommendations in the President's message concerning railroads made a favorable impression, and it was understood that there would be no action against the companies if compliance with the new eight-hour law should be delayed after January 1 because of a failure to obtain a final court decision on the constitutionality of the law by that time.

On the 6th there were more than a million shares again, and the loan rate fell to 3 per cent. Share prices were maintained. Bonds of the Anglo-French loan declined to 93¼, mainly on account of the British Cabinet crisis. There were nearly 1,400,000 shares on the 7th, and the day's business showed a small average loss. The market on the 8th, narrowed again to 981,000 shares, was uneventful, with slight average changes, and the loan rate was 4 per cent. During the week \$51,000,000 in gold was received from Great Britain by way of Canada.

Additional increases of dividends were announced by four copper mining companies and one oil company. The Merrimac Chemical Company is about to declare a stock dividend of 50 per cent. The Guaranty Trust Company of New York pays 12½ per cent extra, making 32½ for the year, and has voted a bonus of \$300,000 to its employees.

The high interest rate was due to no weakness in general financial conditions. Brokers who had failed to provide for their needs with time loans because they objected to prevailing rates found themselves bidding against each other when the Federal Reserve Board's warning against British Treasury notes induced lenders to call

in the loans on demand. The situation may have been affected by recent diversion of a considerable part of the stock of gold from New York to reserve banks in other parts of the country.

### THE STEEL INDUSTRY

Steel mills, working at full capacity, cannot satisfy the demand for their products. A majority of recent orders call for delivery in the closing months of next year or in 1918. Railroad companies must wait until 1918 for 1,200,000 tons of rails which the mills are to make for them. Shipyards all over the world are seeking plates here. Estimates, semi-official, of the quantity of steel bars for munition manufacturers recently ordered by the Allies have risen from 1,500,000 tons and now range between 2,000,000 and 3,000,000, at \$80 a ton. Prices advanced again last week. The addition for bars and pipe was \$5, and tin plate rose from \$6 to \$6.50 and even \$7.

Our railroad companies made a new record for purchases in November, when they bought, or ordered, 56,531 freight cars, 491 passenger cars, 342 locomotives, and 737,000 tons of rails. For these they will pay about \$130,000,000. Never before were more than 25,000 cars ordered in one month. November's output of pig iron, 3,311,811 tons, was a little less than October's. A sale of 50,000 tons for export shows that there is a demand for our raw material of this kind abroad as well as at home.

### WAGES AND BONUSES

There have been many increases of wages in addition to those reported last week, and also gifts to employees. Large gains permit such distributions and the cost of living makes them quite acceptable. Recent announcements include the following, the wage increase in almost every case being 10 per cent:

Wages—Bethlehem Steel Company, 40,000 employees; International Paper Company, 11,000; Pittsburgh Steel Company, 7000; Allegheny Steel Company; Marshall Foundry Company; Elizabeth Thread Mills, Rhode Island, the 10 per cent, making 27¼ for the year; Dunham Woolen Mills and four other similar factories in Naugatuck, Connecticut; the Wabash Railroad Company's shops in Toledo; Ford Plate Glass Company; seven worsted yarn mills in Woonsocket, Rhode Island, 3000; independent iron mining companies in the Lake Superior district, 2700.

Bonuses—The Atchafalaya, Topeka & Santa Fe Railroad Company, \$2,750,000 to be distributed at the rate of 10 per cent of the salaries of employees not under contract and in the service two years; several copper companies, Lake Superior district, 17,000 men to receive 25 cents for every day in the last six months, if steadily employed; Plainfield Trust Company, New Jersey, 10 per cent of salary; Bangor & Arctostook Railroad Company, 4 per cent; Prentiss & Co., Holyoke, 5 per cent; National Blankbook Company, 10 per cent.

## YAMANAKA & CO.

254 Fifth Ave., New York

in a decision you should come to NOW. Ask to have your subscription begin with December. Article: "Who Is Jesus Christ?" "Carnal vs. Spiritual Mind" "God and One Man." Address: 135 Institute Place CHICAGO

## KEEP AN EYE ON POSTERITY

Mr. George Haven Putnam, who "knows all about books," and who spoke about them at the National Arts Club in New York the other evening, predicted a state of things in the publishing world that should give our prolific authors pause. Among the ancients, with their costly papyrus and parchment, only the things really worth while were done into books, and the books did remain in being. There is no similar prospect nowadays: books are not made to last, and Mr. Putnam thinks that only the books worthy of being repeatedly reprinted will ultimately remain to represent "modernity"—as we are pleased to call it. There is food for thought along efficiency lines here—perhaps for our publishers, but certainly for our authors!

## THE NEW HOUSEKEEPING

The National Institute of Efficiency has made arrangements whereby wider influence may be secured for the household moving picture film which Mrs. Christine Frederick has produced, and which is entitled "The New Housekeeping." It is at once inspirational and instructive, and its good results, wherever exhibitions have already been given, are undoubted. Everywhere the need for better housekeeping is now freely admitted, and the results of investigation of women's work in the home are beginning to show that what was once accepted as inevitable drudgery can be removed by applying just that kind of imaginative analysis by which Mr. Frank Gilbreth revolutionized brick-laying and other concerns of mere men.

The problem, however, is rather to create interest in the possibility of improvement than to establish scientific rules for an efficient home, for women are said to be more conservative than men, and the case for modern methods can surely be proved, once the housewife's interest is secured. For this reason the present method of spreading the new housekeeping seems particularly appropriate. The hard groundwork of theories and explanations, which sometimes look so formidable and inconclusive in cold print, becomes positively attractive when the screen supplies the inspiring sight of actual results. One "sees how it all works out," and in the case of Mrs. Christine Frederick's film the solutions are based upon some years of study, with practical conditions in American homes always in mind.

Mrs. Frederick has achievements to her credit that make her eminently qualified to continue her work thru this new medium. She has written an admirable book, from which the title of the film is taken, is the author of a successful course on household engineering, and has contributed extensively to such magazines as the *Ladies' Home Journal*. Still more im-

portant, perhaps, under the circumstances, is the fact that she is a wife and mother. The National Institute of Efficiency has great pleasure, therefore, in announcing the decision to coöperate in securing the widest possible use for "The New Housekeeping" film, and it will be glad to explain the terms on which exhibitions can be arranged for—they have been made to conform simply with the cost of production, etc.—to anyone writing to the New York office: 119 West Fortieth street.

COÖPERATION IN EXPORT  
TRADE

By a curious coincidence the report of the Federal Trade Commission on "Coöperation in American Export Trade" is made public just as the members of the National Institute of Efficiency are receiving the second of the Institute's series of efficiency monographs, entitled "Trade Expansion and National Independence." The commission's report consists of two heavy volumes of a thousand pages of solid facts and figures. Monograph of Efficiency No. 2 is an interestingly written booklet that can be split into

International Film

## A BOY WHO IS EFFICIENT

Isador Schletter, sixteen years old, has been appointed Associate Judge of the Juvenile Court in Passaic, New Jersey. He has earned his living selling papers and has saved \$800. The judgeship means to him a chance to tell the other boys how to make good, too.

the pocket and read thru in half an hour. But both teach the same lesson, that the United States cannot build up its foreign trade without united action. The commission finds:

(1) That other nations have marked advantages in foreign trade from superior facilities and more effective organizations, and (2) that doubt and fear as to legal restrictions prevent Americans from developing equally effective organizations for overseas business.

The author of the monograph on "Trade Expansion and National Independence," Dr. Edwin E. Slosson, says:

Evidently there will be after the war two great antagonistic groups of commercial powers in both of which the means of production and distribution will be more efficiently organized than ever before. . . . A disorganized America will be no match for an organized Europe either in peace or war.

This question of combination for trade expansion will be one of the chief subjects of discussion in the congressional session just opening and every citizen should study it. Those who are not members of the National Institute of Efficiency can purchase the new monograph on "Trade Expansion and National Independence," for 25 cents, from the offices of the Institute, 119 West Fortieth street, New York.

## PREPAREDNESS FOR RETAILERS

Never in the history of retailing, says Mr. J. W. Hamilton, of St. Paul, in a forward-looking pamphlet he has issued, have so many merchants realized the absolute necessity of preparation for themselves and their clerks if they are to receive an adequate return for their work and the capital invested. Merchants cannot go to business schools in their home towns, and short courses in the universities, while extremely valuable, do not, he points out, cover all the ground. "I would suggest that the Retail Merchant's Organizations in every state appoint a committee and prepare the best possible paper, outlining the training and knowledge a merchant should have as well as his clerks, so as to develop them to the highest possible point of efficiency."

"These questionnaires, prepared by the committee after consultation with the proper officers of the State University, would be sent to a large number of representative merchants in every portion of the state and the replies, analyzed by the committee and the State University, would be the foundation for the course. When like papers have been worked out by a similar committee in other states in connection with their state universities, then there could be an exchange, so as to develop the very best foundation for the course. The necessary books for study would then be worked out and a correspondence course started by the universities, using the books as a foundation and possibly winding up the course with a certificate of efficiency."

## STOLEN PROPERTY?

In reading over the following poem it struck us as strangely familiar. As a whole it is undoubtedly original; anyhow we never read it before, but yet we seem to remember the lines or at least some of them. Before we bring charges of plagiarism we must have the alleged stolen property identified. So we have decided to ask the help of our readers for we know how quick they are—especially the culture clubs and literary societies—at catching such quotations. We wish every one who recognizes the source of any of the lines would write us where they are to be found. If we can get the names of the authors and poems from which they are taken then we can confront the author—or rather the compiler—with the proof of the plagiarism. We shall be glad to publish the names of the literary detectives who are most successful at discovering the original owner of these purloined lines:

### A LEAP YEAR TRAGEDY

By Sophie G. Keenan

Up from the meadows, rich with corn,  
A lady stepped with golden hair,  
This was the maiden all forlorn,  
(A pagan nurtured in a creed outworn),  
But the fool, he called her his Lady Fair.

Thrice, at the huts of Fontenoy,  
He turned and kissed her where she stood,  
"Now, farewell grief, and welcome joy!  
Come to my arms, my beamish boy!—  
Altho thy breath be rude!"

"If I am not worth the wooing,"—  
(With an oath, King Olaf spoke)—  
"And could December's winds ensuin',  
Let us then be up and doing!"  
The deaf ear instantly awoke.

"Nobody axed you, sir," she said;  
"They swore that you were well nigh dead  
for me!"  
Merrily rang the bells, and they were wed,  
For fools rush in where angels fear to  
tread,  
What shall the harvest be?

When, in the course of human events,  
He sees his brood about thy knee,—  
(Nine little goblins, that had no sense,  
By merit raised to that bad eminence)—  
Where five-score fighting men wad flee.

Like the leaves of the forest when autumn  
hath blown,  
O, listen, listen, ladies gay!—  
Alone, alone, all, all alone,  
He stole a pig and away he run,  
That Day of Wrath, that Dreadful Day!

## REMARKABLE REMARKS

ANNE SIMON—Poetry should fantomize  
a universe.

WOODROW WILSON—Not all of Wall  
Street is bad.

OTTO H. KAHN—We New Yorkers do  
not mix enough.

KING FERDINAND OF BULGARIA—Can  
you see peace in sight?

HENRY CLEWS—Everybody should ac-  
cept the inevitable in a kindly spirit.

ARNOLD BENNETT—The prospect of death  
gives me no moral or spiritual qualm.

GEORGE BERNARD SHAW—I am never in  
a hurry to bid the devil good morning.

W. L. GEORGE—It can probably be said  
that no woman has ever been an intellec-  
tual.

MICHAEL MONAHAN—Socialism cannot  
be destroyed until it has been given a fair  
trial.

MRS. CARTER H. HARRISON—Once upon  
a time I bathed and drest in thirteen min-  
utes.

REV CHARLES A. EATON—The most  
honorable place in the country is Wall  
Street.

SYDNEY BROOKS—I know of no metrop-  
olis so intensely absorbed in its own affairs  
as New York.

ANDREW CARNEGIE—We can let the fu-  
ture take care of itself, if we obey the  
judge within.

SECRETARY LANE—New York may be a  
feudal state but the rest of the country  
wants to be free.

GEORGE DE FOREST BRUSH—Artists are  
producing canvases today for which they  
ought to be arrested.

HEALTH COMMISSIONER ROBERTSON—  
There is no reason why people should not  
live on forty cents a day.

LADY SCOTT—It is no small moral com-  
fort in these days to feel yourself clear of  
the disgrace of leisure.

J. A. HOBSON—The old dull puritan  
Protestantism, with its dogmas and aus-  
terities, is doubtless doomed.

GERTRUDE ATHERTON—The conclusion of  
this war may mark a conclusive revulsion  
of European women for men.

NICHOLAS MURRAY BUTLER—We are  
witnessing the nemesis of the decline of  
nationality as an end in itself.

THEODORE ROOSEVELT—I care little for  
the cubist school in patriotism any more  
than I care for it in art or poetry.

RAY STANARD BAKER—The one essential  
purpose of education is to get an individ-  
ual going from within so that he will run  
himself.

DR. HARVEY W. WILEY—Old age is sim-  
ply a matter of chemical decomposition and  
chemistry will find a way to stop the decay  
of tissues.

PRESIDENT MCGLYNN, of the New York  
Hotel Association—No man ever gets a  
world-wide horizon of life by drinking ice-  
cream sodas.

ED. HOWE—Look up the history of near-  
ly any woman who is particularly good  
looking and you will find she has been mar-  
ried at least twice.

ROBERT W. CHAMBERS—Of all the  
abominable deviltry practised in this most  
hellish war, the condemnation to slavery  
of the Belgian nation is the most damnable.

SECRETARY NEWTON D. BAKER—Never  
again in the history of the world can juris-  
prudence be what it was before Mr. Bran-  
deis plended the Oregon case.

EMIL VANDERVEIDE—The German Gov-  
ernment appears determined to treat the  
Belgians as the conquered were treated in  
the age of Assyria and Babylon.

DR. KARL LIEBKNECHT—The German  
Government is the unrestrained representa-  
tive of the policy of world wide expansion  
and the strongest promoter of competitive  
armaments.

Quality folk quickly discriminate between *true elegance* and its *imitation*—that's the reason they are quality folk

Tone! Now—for ten years—and longer—the Packard has had the unstinted approval of a discriminating patronage.

And today it is a more luxurious, comfortable and serviceable car *than ever before*.

All that America and Europe have learned about carriage elegance is embodied in the new Twin-six.

Its dignity of design, the lasting richness of its finish,

the sumptuous ease of its upholstery and the quiet beauty of its furnishings, are all outer evidences of a deeper genuineness which makes it—and *keeps it*—the standard equipage of refinement.

The powerful new motor has freed *enclosed* Packards for country touring—for all roads—at all times of the year.

Approved! True elegance is not to be imitated.

*Ask the man who owns one*

Twenty distinctive styles of open and enclosed Twin-sixes  
Cars on display at Packard branches in all important cities

## THE FIRST TO SPEAK FOR PEACE

THE KEYNOTE OF CHANCELLOR VON BISMARCK-HOLLEWIG'S SPEECH BEFORE THE REICHSTAG WAS THE GERMAN  
"DETERMINATION TO FIGHT ON, YET READY TO MAKE PEACE"

## THE PROSPECT OF PEACE

**W**HAT will the Allies do with the invitation of the Central Powers to discuss the question of peace? Two courses are open to them—categorical refusal or consent; for any refusal that is not unqualified will be equivalent to more or less modified consent. It is impossible to see how the reply can be anything other than affirmative; any other answer would play directly into Germany's hands. If Germany is sincere, the rejection of her overtures would throw upon the Allies the terrible responsibility of forcing the continuance of the war when the possibility of its termination was in sight. If Germany is insincere and merely maneuvering for a tactical advantage, to return a blank No to her proposal would be the surest way to make that advantage hers. The Allies must consent either to state their case or to make a counter request for a statement of Germany's case or they will have been outmaneuvered from the very start.

It was only natural that the first reaction of the Allied popular mind in the Allied countries to the German proposal should be an indignant negative. The tone of the German note could not but outrage the spirit of the peoples who hold it as the dearest conviction of their souls that, whatever the military advantage of the Central Powers at the moment, their complete defeat must and will be accomplished. Besides the enemies of Germany have little reason to trust Teutonic diplomacy and Teutonic faith. But already in England, where after all the burden of the decision must rest, there are clear indications that sober second thought will lead to wiser counsels.

It would have seemed unbelievable until it happened that the most warlike of the belligerents should be the first to intimate that it had had enough. It really matters little whether the intimation truly represents a sincere purpose or is merely intended for home consumption, to create possible dissension among the Allies, and to influence neutral opinion. The mere making of the first advances creates a condition from the implications of which Germany cannot escape.

If the German invitation is not to be spurned, the vital question immediately presents itself, What should the terms of peace be? Since the Central Powers have made the initial advances this really resolves itself into the question, What ought the Allies to set up as their irreducible minimum?

First, full reparation, in so far as reparation is possible, to Belgium. The whole world, outside of Germany and the other Central Powers, knows that a shameful international crime was committed when the German army smashed its way across the Belgian border.

Second, withdrawal from all other invaded territory. What should the Allies grant in return?

The return of Germany's colonies and of any other invaded territory of the Central Powers.

In other words, the underlying basis of the peace settlement should be the restoration of the status quo of August 1, 1914. This must not turn out to be a war of conquest for either side.

This is not to say that the status quo as represented in the map of Europe of 1914 should be forever inviola-

ble. Unquestionably some national boundary lines run in the wrong places. It cannot be denied that there are some vexatious problems of territorial sovereignty that must yet be solved in the interest of justice and humanity. But those are problems that it must remain for the future to untangle, and to untangle by some other means than war. For war is not always on the side of justice, and seldom on the side of permanence. In the conception of a League to Enforce Peace is to be found the first step toward an organization of the world which will have the power to rearrange boundary lines and to readjust the relations between nations without recourse to the battlefield.

But on this foundation of the return to the status quo other structural elements must be erected. The motto of the peace conference should be, It never can happen again. There should come out of the Great War a Great League of Nations, dedicated to the proposition that it is the concern and the business of all to compel each to keep the peace. With the entering into this League should be joined by each nation a self-denying ordinance pledging not only the cessation of armament building but the gradual reduction of existing armaments. This would mean again in the field of military preparation the retention of the status quo, but with the purpose of the armaments transformed from the threatening of war to the enforcing of peace. Incidentally the United States should become a member of the League so formed, in order that it might include from the start all the great powers of the world.

What would Germany, the Allies and the world respectively gain from such a peace achieved at this moment?

Germany would escape the ultimate overwhelming defeat which the Allies are more than ever determined to administer and the price of which would be disastrous for Germany to pay. The proposal of Germany must indicate, even if it does not directly spring from, a conviction that a positive victory for her arms is an impossibility. Therefore a status quo conclusion is the best she can now hope for.

The Allies would have administered an overwhelming defeat to the German theory of eternal German rightness and the divine appointment of Germany to thrust the domination of her ideas upon the world by force. When the Superman and the Supernation fail to conquer, the failure is annihilating.

The world would gain not only present peace, but the assurance, in so far as it is humanly possible at this stage of the world's development, of peace for the future.

But is that all?

The Germans will say, How about the Balkan problem, the unredressed grievances of Bulgaria arising from the second Balkan war, the pernicious activities of Serbia out of which the war sprang, the wrongs of Russian Poland, our road of expansion toward the East, our place in the sun?

France will say, What of Alsace-Lorraine?

Russia will say, What of Constantinople and our access to the open sea?

Italy will say, What of Italia Irredenta?

Japan will say, What of Kiauchau?

England's colonies will say, What of the German colonies *we*, not England, conquered?

There is but one answer. This must not have been a war of conquest, even a war of reconquest. Wars of conquest always breed other wars. This war must bring forth, not other wars, but lasting peace.

The world must learn from this—the Great War—that war is not the solution of the problems that arise between nations, but merely their aggravator. Let peace come now without conquest and perchance the world will set itself to learn how to solve its problems by the wisdom of peace. Let this war end with territorial acquisitions and depredations and another greater war will rise from the ashes of the old.

## WHY THERE ARE TWO POLITICAL PARTIES

THE continued existence of two opposing political parties in a state is one of the most curious of the phenomena of politics. That half of the intelligent people of a nation should perpetually differ from the other half on all questions of public policy is remarkable; that these two parties should consist of substantially the same members whatever the issue may be is still more strange, but that a party so constituted should often assume a position that it formerly opposed would be quite incredible to us if it were not so familiar.

One naturally inquires whether such a condition of things is essential to popular government. History undoubtedly answers this question in the affirmative and it is not difficult to see why this should be the case. It comes from the impossibility that there should be more than two sides to any conflict. A three-sided fight is a physical impossibility. It resolves itself into a fight of two against one, followed perhaps by a struggle between the victors. There are no neutrals on a battlefield. In all the records of war there is not an instance of an engagement between three armies where each fought the other two with equal earnestness.

So in politics when one issue is of absorbing interest—that is, when there is but one battlefield—there can be but two great parties. This does not mean that there are only two opinions on any question. There are as many opinions as there are intelligent men, and the diversity of sentiment in the same party is usually much greater than that of the public positions of the two parties. Neither is there anything in the traditions or principles of a party which decides the exact position it is to take on a new issue. But when a question comes up, the two parties instinctively assume those positions which will most nearly divide the body of voters into two equal parts.

In the course of the campaign both parties push forward their claims so as to occupy as much as possible of the debatable ground and they tend to meet in the middle. The platforms and speeches sound much the same because these stand on the firing line, but the bulk of the membership of the two parties may be far apart. A boundary is a mathematical line. A party is a body of two dimensions and its depth may be the greater of the two. The party as an organization has no principles; only the members have principles, and not all of them. The party organization is simply a vote-getting machine, and to get the votes of the indifferent and mod-

erate mass it must come as close as it can to the opposing party.

So there is no room for a third party between them. Where other parties exist it is because they are taking up other issues than that on which the two main parties divide. For instance, while the Republican and Democratic parties were fighting over protection and free trade—or ostensibly over a trifling increase or decrease of customs rates—the Socialist, Prohibitionist and Populist parties sprang up advocating new policies that they considered more important than the tariff. Sometimes there seem to be three parties in the field dealing with much the same questions. That was the case four years ago. But when the smoke of the campaign cleared away it was found that there were really only two, Democratic and Progressive, for the Republican was not in it.

Every question as it is presented to the voter can and should be reduced to its simplest form, the form that can be answered by "yes" or "no." The Scotch verdict is impracticable. "To be or not to be that is the question" to which all problems, however complicated, are ultimately reduced. Man is a bilateral animal. He has two hands, two eyes, two ears and two legs. He can see only two things at a time clearly enough to compare them. His every action is based upon the choice in a bifurcated option. He is always confronted by a dilemma. He stands forever at the crossroads. So we see that the phenomenon of the persistence of two political parties in an electorate concerned with the same question is no accident, but rests upon a deep-seated psychological foundation.

## THE SUPERSTITION OF ORDEAL BY BATTLE

THE chief cause of the reluctance to make peace is apparently the feeling on each side that a clear and overwhelming victory is necessary in order to prove that the other side was wrong in starting the war. Obviously this is absurd because the only thing which a triumph could determine is which side is the stronger, not which side is the right. When we come to consider how such an absurd notion as that success in war proves the righteousness of the cause came to be so deeply rooted in the human mind we find that it is one of those medieval superstitions which still survive to plague the twentieth century. There were in the medieval courts two ways of deciding a question. One was to have it referred to a judge, the other to have it determined by a duel between the contesting parties, or, in case they were women or children, between their chosen champions. The second was commonly regarded as being more certain than the first because it was an appeal to the judgment of God instead of leaving it to the opinion of fallible human beings. Now, however, the world has ostensibly come to believe that arbitrament of arms is not the best way to determine the Divine Will or the path of justice.

But it is undoubtedly this subconscious feeling much more than the desire for the prestige of victory or the desire for material gains that makes all of the belligerents unwilling even to discuss the question of peace so long as the war is in the state of a drawn game. It ought to be possible, however, to destroy this hampering superstition of the past because a moment's

calm reflection shows it is a fallacy. An overwhelming victory for Germany would not justify the German motto *Gott mit uns*. A crushing defeat of Germany by the Allies would not in any way prove the contention of the Allies that Germany was the aggressor and that her methods of warfare are brutal. It would not even convince the German people that such is the case. It might, indeed, have the contrary effect. To send the Kaiser to St. Helena or to hang him, as some British journalists have demanded, would be quite likely to increase the love of the German people for the Kaiser and what he stands for. They might make him a saint as a certain part of the English people have King Charles the First, or it might bring about a revival of the monarchy as was the case with Napoleon in France.

In August, 1914, a considerable number of Germans thought that Germany was wrong to enter the war, and a larger number of Englishmen thought England was wrong to enter the war. Most of these have, under pressure of public opinion, been convinced of the righteousness of their country's cause or have been forced to keep silence. The outcome of the war will not in any way determine which side should bear the burden of blame. Most people have long ago made up their minds as to the causes of the war so far as they could from such scanty and partizan evidence as has been available. This opinion is subject to revision from time to time as new evidence as to the intrigues of diplomats and the force of the unseen powers is brought to light. The verdict of history has many times been given in favor of the defeated party and many a drawn battle is now regarded by the world as a moral victory.

### FROM SOUTH TO NORTH

THE importation of tropical products by the United States has doubled in the last decade. In the fiscal year 1916 we paid to the countries south of us over a billion dollars for their products.

An increase of imports is not necessarily to be regarded with approval. The question is always suggested, could we not make or grow these things just as well as foreigners, and so keep our money at home? But we can take unalloyed satisfaction in an increase in imports from the tropics for three reasons: first, because they are mostly things we cannot ourselves produce in sufficient quantity or cheaply enough; second, they are chiefly foods and raw materials; third, they come mostly from our own tropical dependencies or American countries with which we are desirous of cultivating closer commercial relations.

Sugar makes up a third of the billion dollars' worth, and we could, if we had to, raise cane and beets enough within the limits of continental United States to supply our needs. But that would involve a high tariff and high prices, so it is better to do about as we are doing now, that is, to grow a third of the sugar we consume and import the rest, chiefly from Cuba, Porto Rico, Hawaii and the Philippines.

The other articles we import are mostly the alkaloids, aromatics, gums, medicines, and dyes which tropical trees have the peculiar knack of manufacturing. Their natural monopoly we are not likely to infringe until our chemists get to work on them. So we have to import our coffee, tea, cocoa, rubber, quinine, spices, indigo and the

like, and we shall also find it profitable to develop enormously our importations of foods and raw materials, such as fats and fibers, fruits and nuts, which can be best grown where there is most sunshine.

A glance at a commercial map of the world will show that most of the traffic lines run east and west. But this is an accidental and temporary condition of affairs due largely to the unequal advance of civilization. Now, practically anything that can be made in London or Berlin can be made in New York, Tokyo or Peking whenever the people of these places acquire equal skill. Anything that can be grown in France can be grown in the United States and China. Westward the course of industry makes its way. America has developed its own manufactures and shaken off its dependence upon Europe. The western states are becoming independent of the eastern. A colony planted in the temperate zone strives against the mother country for economic independence and in time gets it.

On the contrary, a colony planted in the tropics not only remains dependent upon the mother country, but the mother country remains dependent upon its tropical colonies. Germany, shut off from the rest of the world by a ring of enemies, would be willing just now to trade off all of Belgium for a little of the Belgian Kongo, from which she could get rubber and palm oil. Exchange of commodities between countries of the same natural resources, population and technical skill is not so necessary as between countries that differ. The widest and most permanent differences between countries are those imposed by climate, so we may expect that north and south trade routes will become increasingly important in the future. The palm and the pine may never mate, but they will become more and more in love with one another as the years go by.

### CHANGING THE DECALOGUE

THE proposal made at the recent General Convention of the Protestant Episcopal Church to substitute for certain purposes of instruction a shortened form of the Ten Commandments has raised a protest not only from some of the worshipers of that communion, but also from the editorial writers of the secular press who are fearful that any such change would operate as a detriment to religion. It appears that the ark of our ethical idealism will be endangered by any alteration of the phraseology in the Decalogue. In fact it would be as sacrilegious as the despoiling of a Gothic cathedral or the desecration of the Sabbath.

One editorial guardian of religious sanctities waxes eloquent in defense of "the Ten Commandments as we know them in the King James version of the Bible," utterly unmindful of the fact that the Prayer Book version, which the proposal to change affected, is not that of the sacred King James version at all, but one going back a half century beyond the "noble form" of the authorized version. The excision of the prohibition to covet one's neighbor's ox or ass, we are assured, would be a cruel loss, in spite of the fact that the automobile may soon make it necessary to give archaeological interpretations to these ancient terms, which, as it happens, were not in the original version of the Ten Commandments.

So many of these protests and explanations are hu-

morously wide of the mark because the writers are entirely unfamiliar with the facts. Not only do we have a variety of Englished forms, but in the Scripture itself there are at least three editions of the Decalogue, two of which, because of their moral appeal, contend for supremacy in Church and catechetical use. A careful study of these two Old Testament versions shows conclusively that they go back to an earlier and simpler form of the "Ten Words," which our newspaper critics are so fond of representing as "Writings upon the Tablets." It is this earlier ethical standard which has been substituted in many modern forms of worship and instruction for the longer interpretations embodied in Exodus and Deuteronomy:

Thou shalt have no other gods before me.

Thou shalt not make unto thee any graven image; thou shalt not bow down to it nor serve it.

Thou shalt not take the name of the Lord thy God in vain.

Remember the Sabbath day to keep it holy.

Honor thy father and thy mother.

Thou shalt not kill.

Thou shalt not commit adultery.

Thou shalt not steal.

Thou shalt not bear false witness against thy neighbor.

Thou shalt not covet anything that is thy neighbor's.

The use of this earlier version is much to be preferred because of its comprehensiveness, balance, brevity and liturgical fitness.

It is high time to drop this editorial affectedness about "cutting up the Bible" and destroying the beauty of the King James classic. These landmarks of religion and literature are in no danger. The real danger lies in the lack of suitable ways and methods of appropriating their ethical ideals and literary values. Let us add, that, fortunately for those who have been agitated over the matter, the Bishops of the Protestant Episcopal Church refused to adopt the proposed change. The injured editors may go blissfully forward with the knowledge that their children are being taught to regard our Heavenly Father as "a jealous God," and to avoid coveting that which none of their neighbors have.

## OUR PAMPERED ARTISTS

EVERY little while some one rises to inquire why we are producing no great art. If we should believe all we hear we should be forced to admit that the painting of the present day is insignificant, that its poetry is detestable, that its drama is on the decline, that our buildings are monstrosities, that modern music is good for nothing, and so on. Since it is usually professional people who make these complaints of the decadence of their own art, it behooves us to look back to the Golden Age of art and see how the conditions differed from those of the present. Let us turn for instance to 408 B. C., when there was constructed on the Acropolis the Erechtheum, considered the finest example of Ionic architecture, surpassed in beauty only by the Parthenon itself. The account books are fortunately preserved, and in them we read such items as these:

To the sawyer Radius of Collytus, 16 days . . . .	16 drachmas
To the architect Archilochus of Agryle, 37 days . . . . .	37 drachmas
To Pyromachus of Cephisia for making the youth by the breastplate, 60 days . . . . .	60 drachmas
To Prazias of Melite for making the horse and the figure appearing behind, turning the horse around, 120 days . . . . .	120 drachmas
To Teocrus of Cydathenaion for taking down the scaffolding, 1 day . . . . .	1 drachma

Apparently, then if we want to erect a monument that shall be admired thru all the ages, we have simply to hire men by the day to do the job, paying the same wages, say twenty-five cents a day, to the carpenters, architects, gilders, painters, masons, and stone-cutters. Where then were the artists? There were none in our sense of the word. Who produced that marvelous statuary whose slightest fragment is preciously preserved in our museums? No "sculptor" such as belong to our National Academy of Arts, but stone-cutters, so called and so considered, base mechanics of Athens, even the best of them. Plutarch shows us the point of view when he says:

No gentleman, however much he may delight in the Olympian Zeus or the Argive Hera, would like to have been their sculptor, a Phidias or a Polycletus.

The things we honor Greece for were made by men whom Greeks despised. Was it not so in other arts and countries? The Gothic cathedrals are anonymous. They were built by men frightfully underpaid and not thought worthy of mention. The Egyptian temples were erected by starved and beaten slaves. The decorators of the Taj Mahal are unknown to fame. The Iliad and the Edda and the Nibelungenlied were composed by beggarly minstrels. Who can name the author of "Job" or "The Song of Songs"? Our church music, organ and choral, originated in the seclusion of the monastery. The drama was an outcast art in Shakespeare's time and the players were classed as vagabonds. None of them would have thought of claiming a salary greater than that of the Lord High Chancellor.

It would seem then that art flourishes when the artist is snubbed and should we not draw from this the conclusion that art languishes when the artist is prosperous? If so it would be our painful duty to say, "Back to the garret!" to our popular poets. We should draw over the too familiar faces of our novelists the veil of anonymity and force them to return to the wholesome conditions which produced "Roger de Coverley," "Ivanhoe," "Pickwick Papers" and "Jane Eyre." We might even pass a law prohibiting any prima donna or an actor in the movies from receiving a larger salary than that which we give to the President of the United States.

In the elder days of art it was the custom to admire the work and ignore the artist. Nowadays we admire the artist and ignore his work. We have allowed the painter to step in front of his canvas. We give the sculptor precedence over his statuary and speak of "Macmonnies' Fountain" and "Rodin's Thinker," instead of "Olympian Zeus" and "Argive Hera." We read so much about an author's dogs or automobiles or affinities that we have no time to read his books. Magazines and departments that were established for the criticism of books are now devoted to the eulogy of writers. Their fanfares announce the approaching apparition of a new literary genius and long before his volume is on sale we have learned what he eats for breakfast and how he combs his hair; we have seen how he looks in his study and in his bathing suit. By the time his book appears we are likely to feel so thoroly acquainted with him that we have no curiosity left to read what he has written. It is like a banquet where the toastmaster takes up all the time by his introduction of the speakers.

# THE STORY OF THE WEEK

## Germany Proposes Peace

On December 12 all of the members of the Reichstag, even those at the front, and the entire diplomatic corps were in attendance, for a previous notice had been sent out that a declaration of historic importance would be made by the German Government. This proved to be announcement by Chancellor von Bethmann-Hollweg that he had that day despatched to the Entente Allies a proposal for opening peace negotiations. This note, which we publish complete elsewhere, was handed to the legations of the United States, Spain and Switzerland, which represent the Allies in Germany. Similar notes were sent simultaneously by Austria-Hungary, Bulgaria and Turkey. A mes-

sage was also sent to the Vatican asking for the support of the Pope in the work of peace.

In his address to the Reichstag the Chancellor reviewed the recent progress of the German armies and told how the entrance of Rumania into the war against them, which was designed as a fatal blow, had instead provided Germany with grain, oil and other goods sufficient to relieve her needs, while the attacks made at the same time by the British, French, Italians and Russians had been successfully resisted. The Chancellor concluded:

Our strength has not made our ears deaf to our responsibility before God, before our own nation and before humanity. The declarations formerly made by us concerning our readiness for peace were evaded by our adversaries. Now we have advanced one step further in this direction. On August 1, 1914, the Emperor had personally to take the gravest decision which ever fell to the lot of a German—the order for mobilization—which he was compelled to give as a result of the Russian mobilization. During these long and earnest years of the war the Emperor has been moved by a single thought: How peace could be restored to safeguard Germany after the struggle in which she has fought victoriously. In a deep moral and religious sense of duty toward his nation and, beyond it, toward humanity, the Emperor now considers that the moment has come for official action toward peace.

The overtures of the German Government are for the purpose of initiating negotiations for the establishment of a lasting peace. It is said to be the desire of Germany that the representatives of the belligerent powers meet in conference at The Hague in January for a full discussion of all the questions at issue. What terms Ger-

many is willing to concede is a matter of surmise, for no authorized statement of them has been made public, but from what has been allowed to transpire from semi-official sources it is supposed that the basis of Germany's tentative proposals will be substantially the *status quo ante bellum* or the return to the conditions that existed before the war except as to the Balkans and the Russian frontier. Germany is thought to be willing to evacuate all territory now occupied by her armies in Belgium and France. Belgium then will be reestablished as before, tho Germany may insist upon the defortification of Antwerp and other Belgian cities or similar precautions to prevent Belgium being used by France and

#### THE FARM TRACTOR ADAPTED FOR WAR USE

Perhaps as great a contribution to warfare as the British tank is the trench-digger, first used by the French army. Its construction is somewhat similar to the prairie plow, but it digs deeper and it scoops the earth up into breastworks on either side of the trench.

England as a base of attack on Germany.

Germany will demand the restorations of her colonies, altho it is not supposed that she will insist upon regaining Kiaochow, her enclave in China, or possibly upon the recovery of her Pacific islands.

Gorizia and the other Italian conquests are to be restored to Austria. Turkey is to retain Constantinople. Serbia is to be divided between Austria and Bulgaria, the part north of Nish to be annexed to Austria, the part south of Nish, including the Macedonian territory that Serbia took from Bulgaria four years ago, to be annexed to Bulgaria. Doubtless also Bulgaria would claim the Dobruja, at least that part of it that Rumania took from Bulgaria four years ago. Albania is presumably to be reestablished.

The most striking feature of these rumored German proposals is that Russian Poland and Lithuania be established as independent kingdoms to form buffer states for the protection of Germany against Russia. This proposition puts the British Government in a somewhat embarrassing position, for if an agreement were reached concerning France and Belgium the English people would not be very enthusiastic about continuing the war for the purpose of restoring Russian rule over Poland and getting Constantinople for Russia. Up to the beginning of the war it was the prevailing opinion in England that Poland ought to be independent and Russia kept out of Constantinople. But according to the recent announcement of the Russian Premier to the Duma the Allies have promised not to make peace until Russia gets Constantinople.

That the terms outlined above are substantially what Germany is likely to propose is confirmed by the fact that they are in accordance with her professed policy from the beginning. Germany has always repudiated the allegation of her enemies that this was a war of conquest, and has insisted on the contrary that her purpose was to secure the protection of the Balkans and her own frontier against the aggression of

#### THE GREAT WAR

*December 11*—Nivelle replaces Joffre in command of French armies. Germans cross Chernavoda Bridge.

*December 12*—German Chancellor makes proposals for peace. French Cabinet forms War Council of five.

*December 13*—Premier Lloyd George too ill to appear in Parliament. British advance on Tigris.

*December 14*—Germans take Buzeu, Rumania. Duma votes against consideration of German peace proposals.

*December 15*—Premier Bratiano of Rumania resigns. Greece yields to Allies' threat of war. French victory at Verdun.

*December 16*—British Government takes over Irish railroads to prevent strike.

*December 17*—Alexander Spitzmüller becomes Premier of Austria. Russians driven north in Dobrudja.

Russia. It will be noticed that in these peace terms Germany is asking nothing for herself, but wishes the interposition of Poland and Lithuania between Russia and Germany. For her allies she asks that Turkey retain Constantinople, and that Austria and Bulgaria obtain Serbian territory. It is intimated that Germany will favor the establishment of a League to Enforce Peace, and will not object to a reduction of armament.

#### French Victory at Verdun

General Nivelle inaugurated his accession to the supreme command of the armies of France by carrying out an attack which he as commander at Verdun had planned and prepared. The execution of it was entrusted to General Mangin, who recently gained renown by the recapture of Fort Douaumont. This new effort pushed the French lines still further forward in the same general direction. It began with a furious bombardment, which was kept up for seventy hours without cessation. At ten o'clock on December 15 the guns were lifted so as to throw the curtain of fire behind the German front, then the French charged the trenches, which they carried quickly and with small losses.

The defenders were so demoralized by the long bombardment and the vigor of the attack that they surrendered in unprecedentedly large numbers. Before dark the French had taken more than nine thousand prisoners and eighty cannon.

The attack resulted in the gain of a crescent-shaped strip extending from Pepper Ridge (la Côte de Poivre) to Damloup, a distance of about seven miles. This ground has been held by the Germans ever since February 25. The rapid recovery of these hard-fought fields proves not only that the French have developed a very effective mode of attack, but also that the German forces have been much reduced both in numbers and quality. It is supposed that Hindenburg has withdrawn from France all the troops that can be spared for service in Rumania, leaving only just enough, in his opinion, to hold the lines at Verdun and the Somme against French and British attacks during the winter.

#### Allies Threaten Greece With War

The blockading of the Greek coast and the seizure of Greek shipping wherever found proved not sufficient to force King Constantine's acquiescence in the occupation of his country by the Allied troops. Instead, he appeared to be massing troops in Thessaly, where they might be employed in attacking from the rear the Allied forces of General Sarrail in Macedonia while the Germans and Bulgars attacked them from the north. In fact, it was reported that the Greek troops had attacked the French at Katerina in Thessaly and driven them back toward Salonica.

On account of the failure of their former efforts to coerce Greece, the Allies on December 14 presented an ultimatum to the Greek Government demanding compliance within twenty-four hours under penalty of war. The Allied legations were ordered to quit Athens on the following day unless the terms were unconditionally accepted and immediately put into effect. Before the expiration of the period the Greek Government gave way and consented to comply with the ultimatum.

The demands are said to include the surrender to the Allies of the Greek artillery and army supplies, the withdrawal of the troops from Thessaly and northern Greece, the control of the railroads, telegraphs and telephones by the Allies and reparation for the attack on the Allied troops in Athens. The blockade will be continued until these measures are put into effect. Since the importation of food and coal is essential for the feeding of the army and the running of railroad trains, the blockade is a very speedy and effective way of bringing Greece to terms.

Admiral du Fournet, the French commander of the Allied fleet, has been removed, presumably because it was felt that he had made a muddle of the Athens affair when the French and British marines were foiled of their purpose in disarming the Greeks and were driven back to the Piraeus. Admiral Gaucher has been appointed in his place.

The Germans and Bulgars are fighting the Serbs and French for the recovery of Monastir, but no striking successes are reported from either side. It is rumored that the Italians who have invaded Albania from the sea are being attacked by Albanian forces that have been armed by the Austrians.

#### The Rout of the Rumanians

After the evacuation of Bucharest the Rumanians retired as fast as possible toward the Buzeu River which runs some fifty miles to the northeast of the capital. Here it was anticipated they would make a stand, for the Russian troops coming down from the north had reinforced them on this line. But the army group of Field Marshal von Mackensen pursued them closely taking several thousand prisoners a day, and his capture of the railroad center of Buzeu makes this line untenable. The Russians and Rumanians are retreating further north, burning the Rumanian villages and granaries so as to leave to the Germans a devastated country and a destitute population. According to the Berlin reports, about 150,000 prisoners have been taken since Rumania entered the war, while the other casualties of the Rumanian army are estimated at twice that.

The retirement of the Rumanian forces west of the Danube has made it impossible for General Sakharoff to maintain his position in the Dobrudja east of the Danube. When the advance of Mackensen into the Dobrudja from the south had resulted in the capture of the seaport of Constanza and the Danube bridge at Chernavoda a force of Russian troops under General Sakharoff was sent down the Dobrudja from the north to recover these important points but he was held in check about ten miles north of the railroad that connects the port and the bridge. When he retreated the forces under Mackensen crossed the bridge and so attacked the Rumanians from the east while they were being attacked from

advance of the invading armies has made even Jassy, on the Russian border, unsafe as a seat of government, so the Rumanian King and Parliament intend to go to Petrograd.

#### The Occupation of Rumania

As in the case of Belgium and Poland the Germans had prepared in advance a civil government for the country about to be conquered. As early as October 1, at least, General Tuelff von Tschefe und Woidenbach had been selected as Chief of the Military Administration of Rumania with a corps of experts in agriculture and petroleum to see that the grain fields and oil wells are brought into efficient production as soon as possible. The new territory now brought under the control of Germany comprises one of the most fertile areas in Europe. Last year the British Government spent \$50,000,000 in buying up the Rumanian harvest so it should not be exported into Germany, but because the Dardanelles were not opened, the grain was stored in Rumania where much of it has now been seized by the Germans. The Rumanians tried to burn all the granaries and stocks as they retreated, but the advance of the Germans was so swift, twenty miles a day sometimes, that they were not always able to accomplish this, so there will probably be enough to feed the native population thru the winter and furnish a large surplus for export. Next summer, if the conquered territory is held and scientifically cultivated, Germany will be relieved of any danger of a shortage of foodstuffs thru the British blockade.

The recent industrial development of Rumania has been largely carried on by German capital and management. The Rumanian public debt amounts to \$325,000,000, of which \$150,000,000 is owed to Germany. Of the capital invested in the oil wells 37 per cent is German. It was because of this, and the large number of Germans and Austrians resident in Rumania, that it was for two years uncertain which side the country would take. So long as King Carol was living he kept Rumania from declaring war against Austria and Germany, but his nephew Ferdinand, tho also a Hohenzollern, was less attached to the reigning branch of the family, and when he succeeded to the throne the pro-Ally party gained control. Two of King Ferdinand's brothers are generals in the German army, and one of these is taking part in the invasion.

#### Congress and Prohibition

The question of the prohibition of the manufacture and sale of intoxicating drinks is now before Congress in a double form, as a bill applying only to the District of Columbia and as a constitutional amendment for the whole United States. On December 14 the Judiciary Committee of the House of Representatives reported the constitutional amendment favorably by a

#### THE FRENCH WAR COUNCIL UNDER BRIAND

From left to right: the Minister of Finance, Alexandre Ribot, a member of the former French cabinet; Albert Thomas, Minister of Munitions and Transportation, believer in business efficiency; General Hubert Lyautey, Minister of War, formerly Governor of Morocco; and the Minister of Marine, Rear Admiral Lacaze

vote of twelve to seven. It is generally conceded that if there is time for a vote upon the question at this session of Congress the prohibition amendment will command a majority of the votes in the House of Representatives, but that there is small prospect of its winning the necessary two-thirds vote in both Houses which would bring the amendment before the states for ratification.

The Sheppard bill, which prohibits the manufacture and sale of alcoholic liquors in the District of Columbia after November first of next year, has a better chance of success, altho the opposition in the Senate is not inconsiderable. Even if the bill passes both Houses of Congress it may be defeated by the voters of the District of Columbia if Senator Underwood's amendment providing for a referendum vote by the citizens of the District is added to the measure. The Post Office Committee of the House of Representatives has reported a bill by Representative Randall of California closing the mails to liquor advertisements and circulars of mail order houses soliciting sales of alcoholic beverages.

On the same day that the House Judiciary Committee reported the prohibition amendment it also reported the woman suffrage amendment by a vote of eleven to eight. The committee reported the amendment without recommendation, but advocates of the amendment consider that they have won a tactical victory by getting the question out of committee and thus being able to secure a debate and a vote in the House of Representatives which will show which representatives are to be counted hereafter as for or against woman's suffrage.

**Restricting Immigration** The immigration bill, which passed the House of Representatives at the last session of Congress, passed the Senate on December 14 by a vote of sixty four to seven and now goes to a joint conference to reach an agreement on the Senate amendments. The amendment which caused the most dis-

cussion changed the provision excluding certain Asiatic peoples by race to one establishing a geographical area from which immigration will not be permitted. This brought up the entire question of Japanese immigration, some senators holding that the "gentleman's agreement" between this country and Japan was a sufficient safeguard against the peril of wholesale immigration while others desired the reaffirmation of the agreement in the terms of law. Senator Reed offered an amendment excluding Africans as well as Asiatics, but this was defeated. An amendment by Senator Hardwick relaxed the restrictive provisions against

persons advocating violence and the destruction of property by excepting cases of war or revolution. The immigration bill as it passes the Senate still contains the clause excluding all illiterates from coming to the United States. Unless this provision is eliminated it will almost certainly lead to the veto of the immigration bill, for President Wilson is known to be still opposed to the literacy test.

#### Penny Postage

The annual post office appropriation bill which is under discussion in the Post Office Committee of the House of Representatives will contain some far reaching changes in the present postal system. It is proposed to carry letters and other first class mail matter within the limits of a city or a rural delivery district for one cent. On the other hand, it is planned to increase the rate on newspapers, periodicals and other second class mail matter by subjecting this class to the zone system, familiar to us from the operation of the parcel post. For places within the three hundred mile radius the rate will be one cent a pound, but for greater distances the rate is increased, reaching six cents a pound for distances of more than 1800 miles.

Newspapers and other periodicals object, of course, to the increase in the postal rates, but the most violent opposition to the post office bill has come from business men of Philadelphia, Boston, Chicago, St. Louis and New York against the proposed abolition of the pneumatic tube mail delivery in the first four of these cities and its curtailment in New York. This step was taken by a vote of nine to six in the House Post Office Committee on the ground that the utility of this service did not compensate for its cost. The tubes now in use aggregate more than fifty-six miles in length and cost the government an annual rental of nearly a million dollars. It is claimed for them that they handle mail more safely and expeditiously than any other form of city transport.

#### RUSSIA AND AMERICA CARTOON THE GERMAN PEACE PROPOSAL

Postmaster General Burleson's report points out a surplus of more than five million dollars made by the department during the past year. The Postmaster General recommended an eight-hour day for all postal employees, a readjustment of rates of pay for rural carriers, the purchase of private telegraph and telephone lines in Alaska, Porto Rico and Hawaii, a reduction in postage rates, and, most interesting of all, the establishment of regular aerial mail service for certain routes. A measure of the increased national prosperity during the past year is the fact that over seventy-seven thousand new postal savings accounts were opened and deposits increased by more than twenty million dollars.

**A Farmer Government** The Farmers' Non-Partizan Political League, which swept the polls at the recent state election in North Dakota with the cry, "A farmers' government for a farming state!" has undertaken the organization of the legislature. In the lower house it controls eighty-one votes out of a total membership of 113, and of the twenty-five members of the state senate chosen this year eighteen are adherents of the league. Besides winning the legislature, the league carried its state ticket with one exception and claims a friendly majority of the judiciary. It has, therefore, such an opportunity as very rarely comes to a new party of enacting its platform into law without effective opposition. The legislative program of the league provides for state owned terminal elevators, packing plants, flour mills and other marketing facilities.

**Labor Progress** The annual report of Secretary of Labor William B. Wilson devotes a great deal of its space to the work of the mediation service of the department for the fiscal year ending June 30, 1916. Of 227 cases brought before the mediators 178 were adjusted and only 22 proved

impossible to adjust, the others being still pending or disposed of without the intervention of the department. By these successful adjustments more than one hundred and twenty-one thousand workmen were directly affected and an even greater number indirectly involved. The report strongly emphasizes the need for labor organization and collective bargaining and points out the extreme degree to which organization already exists among the employers and the consequent need for labor unions to neutralize this otherwise overwhelming advantage of the man who buys labor over the man who sells it.

The many recent increases in the wages of men in private employment have given force to the arguments of those who advocate a higher scale of pay for persons in the service of the National Government. The American Federation of Labor has adopted resolutions asking for increases for federal employees amounting to one-third for those now earning less than a thousand dollars a year and decreasing by successive steps in the higher official grades till an increase of only ten per cent is advocated for those earning more than \$2500 a year, including presumably President Wilson and his Cabinet.

Among the more important advances in wages recently made known to the public is a distribution of six million dollars in bonuses to the neediest employees of the American Telephone and Telegraph Company. The special bonus has become general in many branches of industry in every part of the country; perhaps as more suitable to an exceptional and possibly temporary period of prosperity than a change in wages scales would be. These bonuses are not always in the form of cash. The United States Steel Corporation, for example, is offering stock to its employees at easy rates and many corporations are giving Christmas presents of life insurance policies, the

premiums to be paid by the employers. The strike of the Amalgamated Clothing Workers of America in New York won many offers of the eight-hour day and increased wages from individual employers before it was six hours old. The very costly car strike which has been waged in Wilkes-Barre, Pennsylvania, for the last fourteen months, ended with new wages schedules, but the company reserves the right to refuse reinstatement to objectionably active unionists.

**The Man on the Land** Secretary Lane's annual report on behalf of the Department of the Interior, which was made public on December 7, shows clearly the recent progress in developing desert lands. Public land is being settled more rapidly than ever. Twenty million acres were claimed by private owners during the past year, an increase of three million acres in a year. The Government supplies irrigation now to nearly twenty thousand farms, and during the year was engaged in work on twenty-four new irrigation projects. Another interesting and encouraging feature of the report was the progress shown among the American Indians who are wards of the Department of the Interior. The general death rate was cut from over thirty-five per thousand to about twenty-three, and deaths from tuberculosis decreased by two-fifths. Today there are 209,224 Indians in the country and the number is increasing.

Evidence of rapid rural development was given by the Farm Loan Board recently constituted as a part of the federal rural credit system. More than fifty thousand farmers have applied for mortgage loans amounting to about \$150,000,000. Most of these applications come from the southern and western states; over two thousand came from Iowa alone. The location of the twelve farm loan banks has not as yet been announced and various cities are competing jealously for the honor.

**The Railroad Situation** The Supreme Court will hear arguments on the constitutionality of the Adamson eight-hour law on January 8, 1917, when the test case of the Missouri, Oklahoma & Gulf Railway will be considered. Since the law goes into effect on the first of January, it will be effective for a full week before it comes before the court, but several other important cases have been postponed to make way for it and January 8 was the earliest available date. An agreement between the Government and the railroads provides against any difficulty arising from the uncertain constitutional position of the Adamson law. The railroads will keep special accounts of wages due on the eight-hour system and pay the difference between the new and the old rates to their employees as soon as the Supreme Court announces its decision to sustain the law.

But the railroad Brotherhoods are losing some of their enthusiasm for the Adamson law now that President Wilson appears determined to balance it by legislation which would prohibit strikes prior to an official report upon a railroad dispute. Therefore, it is persistently rumored that the unions and the railroad operators will try to reach a basis of agreement that will ignore the legislative victory of the unions and settle matters by direct negotiation. The terms of this compromise are said to be: the withdrawal by the railroads of suits to test the constitutionality of the Adamson law, repeal of the law by Congress, establishment of a board composed equally of operators and union representatives to adjust all future difficulties relating to wages, hours and similar questions, and the establishment of the eight-hour day by agreement. Conferences between railroad managers and the chiefs of the four Brotherhoods will determine within the next few days whether such an agreement can be reached. But it is by no means certain that either Congress or President Wilson will agree to repeal the Adamson law or abandon the rest of the railroad program of the administration, for even if operator and trade unionist are satisfied the interest which the general public has in the prevention of strikes must also be taken into consideration.

**Reviving the Bull Moose** The National Progressive party is becoming more and more sharply divided into fusionist and middle-of-the-road factions. Raymond Robins, Gifford Pinchot and other Progressives who supported Mr. Hughes at the recent presidential election, have publicly taken the stand that the Republican rather than the Democratic party will be the party of progress in the future if it will submit to progressive leadership. Matthew Hale, of Massachusetts, acting chairman of the Progressive national committee, summoned a conference of the Progressive leaders who were opposed to fusion with the Republicans, and these insurgents agreed

## THE GREATEST AMERICAN

The popular propensity for big statues seems to have reached a climax in this massive bronze memorial to Abraham Lincoln—a gift to Cincinnati from Mrs. Charles F. Taft. This photograph shows the sculptor, George Grey Barnard, at work on the modeling of the head. The whole statue is a full length figure and it weighs between three and four tons

to the Republican national campaign. He will be ignored by the leaders of the new movement until such time as he returns to work for an independent third party consisting of none but avowed radicals. In his rallying call Mr. Hale stated the purpose of the new movement. "Sooner or later the liberal elements of all parties and of all sections," he wrote, "will unite to form a really coherent and a really national Liberal party—perhaps under one of the old party standards, perhaps under a new standard—and will complete the work begun so splendidly by Woodrow Wilson and Hiram Johnson. We Progressives must be ready to devote our lives to this work."

**Villa Offers Friendship** The strangest report that has come from Mexico in many months is that Villa, after commanding or permitting many murders of Americans by his followers and issuing decrees and proclamations innumerable directed against the foreign residents of Mexico, has suddenly reversed his policy and extended the olive branch. A Mexican courier reached the border on December 15 from Villa's camp bearing the formal proposal that if the United States would not interfere with his war against Carranza he would not molest Americans, but on the contrary protect their lives and property throughout the country. A few days previous to this conciliatory offer Villa was said to have threatened an attack upon the American punitive expedition if it remained in Mexico, and announced his determination to put a stop to the exploitation of Mexican resources by confiscating the property of foreigners and compelling them to leave the country. The reason for this change of front is not known and it can hardly have much weight with the United States authorities, for even tho Villa now denies that he took any part in the Columbus raid his subsequent record is enough to make him *persona non grata* for the rest of his career.

Carranza's government is for the moment less complaisant than Villa. Alberto Pani, representative of Mexico on the recent joint commission at Atlantic City, has presented to First Chief Carranza the text of the protocol agreed upon by the commissioners. Carranza is said to have approved of the protocol in principle, but it is thought that he may insist upon the modification of some of its terms. General Gonzales, provisional governor of Chihuahua, issued a grandiloquent proclamation on December 6 saying that the sacred soil of his state was "desecrated by the proud Saxon troops" and expressing the hope that the National Government would soon force General Pershing and his army to withdraw. The constitutional convention under the auspices of the de facto government is now in session at Queretaro. A change in the educational section of the new constitution was introduced which would allow clergymen of any denomination to teach in the schools.

# THE GERMAN PEACE PROPOSAL

THEODORE MARBURG  
THEODORE S. WOOLSEY  
SENATOR STONE

SENATOR SMITH  
SPEAKER CLARK  
KUNO FRANCKE

SECRETARY LANSING  
VICE-PRESIDENT MARSHALL  
PRESIDENT BUTLER

## FALSE HOPES

BY THEODORE MARBURG

FORMER UNITED STATES MINISTER TO BELGIUM

**I** FEAR the German offer is only raising false hopes in the breasts of those who think this awful war can be brought to a close now.

Primarily the Allies are fighting to make improbable another such assault on the peace of the world. This cannot be accomplished except by the overthrow of Prussianism. How can Prussianism be overthrown? Surely not by treaty stipulations. Such a treaty would be just as unstable as were Napoleon Bonaparte's periodic treaties of peace which afforded him time to marshal new armies. The removal of the Kaiser himself thru treaty stipulation would scarcely be more permanent than was Bonaparte's forced retirement to Elba. The future security of Europe, so far as Germany is concerned, depends not on any conditions of peace imposed from outside, but solely on the overthrow of the military class and the bureaucracy by the German people themselves. Confidence in the German purpose would then arise forthwith. The new Germany would be hailed as a land of promise. Negotiations for a peace which would be secure could then be opened at once and Germany would be welcomed at the council table of the nations. Now, does any one believe that the grip which the military hierarchy, including the Emperor, has on the German people can be loosened in any other way than by the defeat of the German army?

This, as I have read it, is the task that England and France have set themselves; and men who see the question whole will not blame them if they reject the present offer of the enemy.

*Baltimore, Maryland*

## TWO FAIR PROPOSALS

BY WILLIAM ALDEN SMITH

MEMBER OF THE SENATE COMMITTEE ON FOREIGN RELATIONS

**T**WO of the proposals contained in the dispatches impress me very strongly with their sense of justice and fairness. The restoration of Belgium for the Belgians will touch the heart of every American citizen, while the proposition to recognize the independence and sovereignty of old Poland indicates a somewhat belated but nevertheless kindly purpose to give to these heavily burdened people the rights which are properly theirs and the liberty for which they have prayed for a century. I like both of those propositions and believe they will find ready response from mankind generally. No possible harm can come from a free and full discussion of the question of

peace and it is within the range of possibility that fundamental differences between the warring nations might be composed.

The questions raised by the offer, or the suggestion, are at least worthy of some consideration by the belligerent powers, not necessarily with the hope or view that the plan set forth would in all its details be acceptable, but with the view to transferring the controversy from the battlefield to the forum. It is a well-known fact that after the close of the Russo-Japanese war the conditions of peace were very far from agreeable to either country, but after the representatives of Russia and Japan came together there was very little difficulty in finally settling all the disputed points.

*Washington, D. C.*

## WAIT

BY ROBERT LANSING

SECRETARY OF STATE

**T**HERE is nothing I may say or discuss about Germany's attitude toward peace. The publication, however, of indiscriminate, unauthorized and circumstantial reports is a very serious matter and should be discontinued.

*Washington, D. C.*

## A GERMAN VICTORY?

BY THEODORE S. WOOLSEY

PROFESSOR OF INTERNATIONAL LAW AT YALE UNIVERSITY

**T**HE military situation in a war necessarily colors, if it does not actually dictate, the terms of peace. If, therefore, the Entente Powers accept the German invitation to negotiate now, they practically concede what the Germans claim, victory. This means the triumph of militarism, the continuance of the era of great armaments. If rumor is correct it involves also the economic control of Belgium by Germany and, thru a crushed Serbia and Germanized Greece, facilitates the economic penetration of the Near East, menacing the Suez Canal and the Persian Gulf. Lasting peace cannot be built up on such a basis. Unless military conditions compel the Entente Powers to treat now, the irreducible minimum of their demands should be:

1. The restoration of Belgium with a large indemnity.
2. An independent Serbia.
3. A very considerable reduction of armaments, perhaps amounting to the abolition of the Universal Service principle.
4. Mutual relinquishment of conquered territory.

If after further fighting the Entente Allies are in a position to obtain better

terms, they would be justified in demanding:

1. The cession of Alsace-Lorraine.
2. The cession of Trentino to Italy, creating a watershed frontier.
3. The creation of an autonomous Poland to include German and Austrian, as well as Russian Poland and under its own sovereign to serve as a real Buffer State.

Until Germany becomes a representative Government she is a danger and should be weakened. This can be done thru territorial losses, thru indemnities or thru genuine disarmament, the latter preferred, for it would turn the officer class to civil pursuits and expunge the swashbuckler method from German diplomacy.

*New Haven, Connecticut*

## PEACE IS IN SIGHT

BY CHAMP CLARK

SPEAKER OF THE HOUSE OF REPRESENTATIVES

**G**ERMANY'S proposal, as it appears from the statements and news which have reached me thru the press, opens the way for the President of the United States eventually to offer his services when the time to undertake negotiations arrives. How near that time is no one can tell. It is encouraging to note, however, that a definite pro-peace movement has been launched. Taking the first step is always difficult, but after that progress is much easier.

I believe the President should tender his good offices. By natural evolution and by elimination this country has become the greatest neutral nation at the present time and as such is entitled, I suppose, to first place when the time comes to take up peace. Just what part the United States will have in the peace negotiations is hard to say. It may be our good fortune to offer hospitality to those who will be charged with drawing up the terms of peace; again, we may have no voice or no part. But American influence will be felt because one hundred millions of persons cannot be disregarded outright.

Any move for peace is a step toward peace, and when one belligerent makes an offer, peace is in sight. If the belligerents can be gotten into conference the war will be settled successfully and permanently, I believe. A year ago Germany was understood to be willing to make peace leaving the map as it had been reshaped by the war. If reports are true she is now ready to consider peace on terms much more favorable and encouraging to the other side.

We, as a nation, typify peace. Many of those who, in the years that have

intervened since the war, have come to seek an asylum on these shores, have come simply to escape military or warlike conditions. Here they found peace, even tho on several occasions they have had to fight for it. But we are for peace, and we hope that the belligerents will soon agree to a peace with nothing but blessings to follow.

Washington, D. C.

## DISCUSSION WILL RETARD PEACE

BY THOMAS R. MARSHALL  
VICE-PRESIDENT OF THE UNITED STATES

I AM very glad to see that steps are being taken toward some agreement for peace among the warring nations. But about either the proposals or their effect I can say nothing. I am content to rely upon the superior judgment of the President of the United States in all these matters involving our diplomatic or international relations.

President Wilson asked the people of the country to refrain from taking sides in the matter of the war, to refrain, even, from discussing the questions involved. This, in my judgment, applies to the subject of peace as well as the subject of war. The President has well known that discussion of rights and wrongs in Europe will lead to diverse views that tend to separate us with neither right nor duty being served. Discussion will retard peace, if it is a discussion by those who are not concerned, just as it may foster a continuance of the war.

Conditions pertaining to the war have been analyzed too freely, with the result that such an agitation was created that for a time it seemed as tho America was to be divided up into two classes bent upon the Republic taking the side of one group of belligerents or the other. The agi-

tation created a suspicion about our diplomatic correspondence with the result that each note sent by the State Department was criticized at the time of its transmission by some hot-headed group or other, altho now it is generally conceded that not a single paragraph of any note was based upon anything but recognized principles of international law with reference to neutral nations during the time of war.

Washington, D. C.

## A HOPEFUL SIGN

BY WILLIAM J. STONE  
CHAIRMAN OF THE SENATE COMMITTEE ON FOREIGN RELATIONS

I CAN only say that this country fervently hopes that the offer of peace may be fruitful of results.

This move, or any other move, from either side, is a hopeful sign. It is the first trustworthy sign, the first tangible offer, so far available. Peace rumors have been frequent, often insistent, but never traceable to any responsible official source. The German proposal offers a basis upon which may be built the foundations of a conference. This country would be justified in asking the belligerents to promote peace, for the reason that the warfare which they have waged has resulted in the loss of lives of American citizens and in interference with American commerce.

Washington, D. C.

## CONSIDER THE BALKANS

BY KUNO FRANCKE  
CURATOR OF THE GERMANIC MUSEUM AT HARVARD UNIVERSITY

THE three fundamental questions to be decided by the coming peace conference are: (1), the future of the Balkan States; (2), the future of Poland; (3), the future relation of the Central European Powers to the Entente Powers.

1. It seems to me clearly in the interest of civilization that the danger of Russian domination over the Balkan States be permanently removed. Russia is not a civilizer in the European and American sense. She has not been and according to her whole political structure, cannot be a protector of small nations. Russian preponderance in Bucharest and Belgrade and Sofia would mean Russification of the Balkan States, not the further development of Balkan nationalities so hopefully begun. It would mean the extension beyond the Russian border of all the sinister influences embodied in Russian bureaucracy and the Russian church. It would mean another Finland and another Poland in Southern Europe.

Austria, on the other hand, by the conglomerate character of her own make-up, is bound to be a respecter of nationalities. She has proved this by her decentralization policy in Bohemia and Galicia, and by her compromises with Hungary. She has proved it by introducing self government into annexed Bosnia. The only possible way in which she can hope to attach the Balkan States to her own interests is by fostering the independent life of each of these states under her guidance.

It is therefore in the interest of all Balkan nationalities, and it is in the interest of all Europe that the coming peace treaty should assure to Austro-Hungary the controlling political influence in the Balkan States. The loss to Russian political influence which this will entail should be made up to Russia by giving her every chance to compete commercially in the Balkan territory, on equal terms with Austria and Germany.

2. It is equally in the interest of civilization that Russian Poland, now occupied by the Central Powers, should

# THE GERMAN PROPOSAL

ADDRESSED BY GERMANY AND HER ALLIES TO THE NEUTRAL  
POWERS FOR TRANSMISSION TO THE ENTENTE ALLIES

The most terrific war ever experienced in history has been raging for the last two years and a half over a large part of the world—a catastrophe which thousands of years of common civilization was unable to prevent, and which injures the most precious achievements of humanity.

Our aims are not to shatter nor annihilate our adversaries. In spite of our consciousness of our military and economic strength and our readiness to continue the war (which has been forced upon us) until the bitter end, if necessary; at the same time, prompted by the desire to avoid further bloodshed and make an end to the atrocities of war, the four allied powers propose to enter forthwith into peace negotiations.

The propositions which they bring forward for such negotiations, and which have for their object a guarantee of the existence, of the honor and liberty of evolution for their nations, are, according to their firm belief, an appropriate basis for the establishment of a lasting peace.

The four allied powers have been obliged to take up arms to defend justice and the liberty of national evo-

lution. The glorious deeds of our armies have in no way altered their purpose. We always maintained the firm belief that our own rights and justified claims in no way control the rights of these nations.

The spiritual and material progress which was the pride of Europe at the beginning of the twentieth century is threatened with ruin. Germany and her allies, Austria-Hungary, Bulgaria and Turkey, gave proof of their unconquerable strength in this struggle. They gained gigantic advantages over adversaries superior in number and war material. Our lines stand unshaken against ever-repeated attempts made by armies.

The last attack in the Balkans has been rapidly and victoriously overcome. The most recent events have demonstrated that further continuance of the war will not result in breaking the resistance of our forces, and the whole situation with regard to our troops justifies our expectation of further successes.

If in spite of this offer of peace and reconciliation the struggle should go on, the four allied powers are resolved to continue to a victorious end, but they disclaim responsibility for this before humanity and history.

not be returned to Russia. The restoration of the Kingdom of Poland, tentatively proclaimed by the Central Powers, is clearly a war measure, actuated by self interest. But it is one of those selfish measures which at the same time tend to promote the general good. It should be made another fundamental provision of the coming peace treaty.

3. But most of all is it in the interest of civilization that the relation of Germany to her eastern and western neighbors be restored as soon as possible to normal conditions. The terms of peace should, therefore, go to the utmost limit of possible concessions. Germany should restore to Russia the conquered part of her Baltic provinces, regrettable as the sacrifice of the important German element in the population of these provinces will be; and she should relinquish and help to rebuild both Belgium and Northern France. France, on her part, should definitely abandon her designs upon Alsace-Lorraine—designs which probably have been the most pernicious among the agencies to bring on this war. And Great Britain should at last abandon her opposition to international agreements establishing the immunity

of private property at sea. It may safely be assumed that the experiences of the submarine warfare have helped to make the British Government aware of the benefit which such an agreement will have for England, no less than for other seafaring nations.

A peace based upon fundamental terms, such as these, would offer, it seems to me, sufficient inducements for all its signatories to form a league to enforce its maintenance. The United States has no duty more sacred and no interest more vital than to help in bringing about such a peace.

Cambridge, Massachusetts

## THE OPPORTUNITY OF THE ALLIES

BY NICHOLAS MURRAY BUTLER  
PRESIDENT OF COLUMBIA UNIVERSITY

THE German Government and their allies have publicly united in a direct appeal for peace. A reading of the terms of this appeal makes it clear that it is directed primarily not to the governments or the peoples of the allied nations that are in arms against Germany, but rather to the governments and peoples of neutral nations and to the people of Germany and of Austria-

Hungary themselves. No one can certainly foretell what the precise happenings of the next few days will be, but it seems highly probable that this appeal for peace indicates that the war will end in the not distant future, and that it will end with the assured triumph of those principles of justice and liberty and right for which the Allies are conducting the battle.

No greater opportunity for an act of constructive and far-reaching statesmanship has ever been presented in modern history than that which is now presented to the governments of the allied powers. If they will now, summing up the best and most convincing things that have been said by their chief representatives during the last two and a half years, unite in a clear, definite, and precise declaration of those principles for which they are contending on the field of battle, and which they will insist must be admitted and assured before terms of peace can be agreed to, they will make an appeal not only to the peoples in neutral lands, but to the people who owe allegiance to Germany and her allies. Among those people there are many who are craving and anxious to hear this message.

New York City

# THE BEAUTIFUL BUSINESS OF LIVING

BY E. P. POWELL

I COUNT it a wonderful thing to have come down thru three generations of world workers; to have been school friend with Grover Cleveland, under Andrew Jackson, when the chief end in school was to learn a bit of Greek, and almost nothing was known or cared about the insects and fungi that ate up the food of the people. Oh, those wasted hours! when I sat in the corner of the old farmhouse with dictionary and grammar, both of which I hated; and filling my mind with what was for the most part as worthless, either as education or as material for life work, as the contents of the waste-basket under my editor's table. Yet I cannot forget that with all the folly of a classical education, I found for a companion old Homer, dear old Homer, and Virgil; and with a compulsory reading of the Bible, I discovered Job; and when I was forty, and had been preaching for years, I heard the Sermon on the Mount.

Then came that wonderful generation, when Boston injected its conscience and its sentiment into the veins of the nation; and dying as Boston began to live as America. It was my good fortune, just there, to know Wendell Phillips, the princeliest of all democrats, as he was chiefest of orators; and not seldom to sit at the feet of Ralph Waldo Emerson. Bayard Taylor read to me from the unfinished manuscript of his *Deukalion*, and bade me know that the gospel of all generations to come would be found in evolution—of which he “desired to be the poet as

*It is peculiarly fitting that the last article which we can give to The Independent readers by E. P. Powell, for many years our oldest and one of our best-loved contributors, should be a reminiscence of his long, contented life, and an optimistic prophecy of the “wonderful time ahead.”—THE EDITOR.*

Darwin was the prophet.” There was a fine host of brave fellows coming up everywhere, all trained to know the laws of life, and see that they were enforced. Slavery was creating such men as Greeley and Sumner and Chase. Slavery was the greatest blessing of America; but it was a greater blessing to get rid of it.

Webster and Clay and Calhoun past off the stage and their compromises went with them. We wrestled for union; and Abraham Lincoln was created. Agricultural colleges were established; the wealth of their bulletins began to rain down upon our farms, and industrialism became the controlling power of the American people. “It is this new age,” said Tilton to me one day, as we were discussing some new strawberries at my Clinton farm, “that we must hereafter consider; not to spend time on quarrels and wars, but how to feed the people, and make the boys and girls useful citizens.” Theodore Parker, like Samson, pounded on the pillars of religious bigotry. The whole social phase of religion

was about to change. What we had to discover hereafter was international good will, and we must learn to proclaim the message of Christianity as a universal message: On earth peace, good will to men.

From this second generation I learned once more to love life; to prize life at its highest value, that beautiful business of living with every faculty working at its best—the whole body and the whole mind charged with health.

My third generation I date from the Parliament of Religions; that great Sunday of humanity. As author of *Our Heredity from God*, I became identified with the “Congress of Evolution,” and opened its sessions with an address. Here now and at last, no not quite at last, began to be fulfilled the hopes and efforts of the two preceding generations. The end of all was to be “on earth peace, good will to men.” Out of this parliament sprang the “Congress of Religion,” now widened into an international association, embodying nobly the hopes and loves of all nations and religions. Involved in this Congress is the eternal doctrine of peace, and the ultimate end of the power of brute force.

So it was I crept carefully down the years, keeping pace with a third generation. The fourth generation is already rapping for the world to come to order. It will be a wonderful time on ahead. Not so many very greatly distinguished individuals probably, but the crowd moving altogether on a higher plane.

# WHO OWNS THE RAILROADS?

BY CHARLES S. THOMAS

UNITED STATES SENATOR FROM COLORADO

OUR vast lines of railway, reaching from the seaboard to the remotest stretches of the Republic, constitute the arterial system of the body politic. The stream of traffic flowing along them is its social and economic life blood. Upon the regularity of this movement its vitality depends. Stagnation and congestion are equally dangerous to its health and well-being. Its vigor is regulated by the normal and constant movement of its trade currents, just as the vigor and health of man depend upon the ceaseless circulation of the blood.

A system so interwoven with the national life, and so indispensable to its well-being, is essentially public, and therefore governmental. Its early development was largely by the state, and its final transfer to private control was a subsequent policy, originating with, and made effectual by keen business intellects, conscious of the marvelous wealth and power involved in the ownership of a nation's system of inter-communication. This power once acquired has been abused in many ways, principally by over-capitalization, discriminations against persons and localities, corruption of public servants, and combinations with great business enterprises for the absorption of rival railroads or the destruction of competition.

While it is true that these evils have been minimized in recent years thru partial public control, they are inseparable from private ownership. Hence, it must be apparent to all reflecting minds, that they have not been, and cannot be entirely removed, so long as this control is not complete, and the orders and decrees of commissions depend for their enforcement in whole or in part upon the owners in possession. The scandalous plunderings of the Rock Island, the New Haven, the Frisco, the Pere Marquette, the Alton and some other systems, were devised and accomplished under the very eyes of the Interstate Commerce Commission; while the many devices for the payment of rebates, notwithstanding the mandate of the written law, are familiar to the reading public. More recently the charge that regraters of food-stuffs were deliberately withholding large consignments of provisions in the freight yards of some of the great centers, to stimulate higher prices, even if untrue, suggests an evil of terrible proportions, which easily effected under private control, would be impossible under public ownership of the railways.

Labor controversies are frequent in the railroad world. They become more formidable as the railways extend, and the brotherhoods increase. These always seriously menace and frequently interfere with essential traffic movements, to the demoralization of business and the injury of the public.

© G. V. Buck

SENATOR THOMAS

Both sides or neither side may be to blame for these disturbances, but the primal fact is that while they are active they cripple a great governmental agency. This should not be possible. A strike in the Post Office Department, or in the Navy is quite as justifiable as one which suspends the operation of the natural highways. They would be less injurious, since the railway company is prone, if it cannot settle, to resort to reprisals which only serve to increase the public suffering. This is not to reflect upon the company; for like anybody else in difficulties, it resists by whatever means it can command.

The railways are burdened with mountains of debt, which will never be paid. They impose a vast and constantly increasing fixed charge upon earnings, and these must keep pace with it, or the road collapses. To accomplish this, betterments are frequently neglected, false economies instituted, and local charges increased. Hard times mean bankruptcy and reorganization, thru which investors suffer, and absorptions of weaker by more vigorous systems are promoted. These absorptions are always attended by increased bond and share issues, which swell the aggregate liabilities to the further detriment of producer and consumer. Share speculation by bulls and bears alike receives fresh stimulus from the practice, which only the strongest systems can survive. Some of these, of which the New Haven is an example, encounter peril from their very strength, and finally go the way of all enterprises conducted for private gain, as distinguished from the public welfare.

Under private ownership, many railroads are constructed in territory al-

ready well supplied with lines of transportation. This is a waste of capital and of energy. The new enterprises are seldom inspired by worthy motives. They are designed to compete with, and menace existing lines, thereby forcing consolidations, or divisions of business, which are of but momentary benefit to their patrons. Other sections of the country, poorly served, and needing better and cheaper traffic facilities, suffer thru this practice, since their needs, tho real, are less alluring to enterprise combined with private capital. They are neglected, and their needs postponed to a more convenient season, the discouraging delays of which often set the tide of improvement and of population permanently in other directions. Under government ownership these unwise duplications would be avoided and the needs of poorly served communities would be supplied by new construction.

The temptation to augment profits by "charging all that the traffic will bear," is too obviously unjust to require elaboration. It strikes equality of service squarely in the face. It has done more to create public hostility to private railway management than any other single practise. Altho it has been largely eliminated, it cannot be wholly suppress, so long as human ingenuity, quickened by the greed of gain, possesses the instrumentalities for its exercise.

Many, if not most of the inequalities of the rate sheet have their genesis in this fact, and since they can be plausibly defended upon other grounds, they will persist until public ownership or control supplants the prevailing system.

PRIVATE ownership has fostered the creation of parasitic growths upon the transportation system. These take extra toll from the public for a service which the railways can do quite as well and which, as the nation's common carriers, it is their duty to do. I refer to the special freight lines, the sleeping car monopoly and the express companies, which have sprung into existence at the behest of railroad men, who perceiving their enormous possibilities, have organized and fastened them upon the national highways as agencies for personal gain. Their ownership and that of the railways are virtually identical. They flourish and grow fat whether the roads do or not. Their dividends are generally unfailing. They transact the most valuable and profitable elements of transportation, thus depriving the railways of essential sources of business, adding enormously to the cost of service, and diverting the revenues from the railway coffers to the pockets of their shareholders.

Public ownership would do away with these leeches of traffic, would discharge their functions directly, and

would reap the benefit of their colossal incomes.

The nation has expended about \$750,000,000 for the improvement of its harbors and waterways. Theoretically its waterway expenditures have been justified by the necessity of making and keeping them navigable for the promotion and interchange of commerce and industry. As competitors of the railways for traffic, and as highways available to the water craft of all the people, they are supposed to serve a great and beneficent national purpose.

Unfortunately theory and fact are here at total variance with each other. As our river and harbor bills increase, our river traffic diminishes. This is largely due to the private ownership of our railway systems, whose vast mileage and superior equipment enable them in some localities to minimize and in others to destroy water competition, both actual and potential. This they accomplish by unfair competition, by the absorption of river and harbor fronts at terminal or exchange points, and by refusing interchange of business. Hence our appropriations for river improvements, save as they minimize floods and freshets, are wasted. The waste will continue until land and water transportation facilities become parts of a unified system under complete government control. Germany has set us an example in this respect, which we must imitate if we are to make effectual or any use of our navigable rivers, either to relieve the congestion of the railways or to serve the communities which are directly dependent upon them.

**U**NDER private ownership and control, profit is naturally and properly the end and object of the transportation business. A great governmental agency thus becomes an asset and medium for gain and speculation. The public interest tho concededly paramount, is of necessity subordinated to the more insistent problem of profit and loss. Hence public service is not, and cannot be the end and aim of private operation. But under government ownership, public service is substituted for private gain, and the traffic of the country freed from the trammels of competition or combination inspired by the lure of profit, will be operated for the benefit of all. The aim will be to make it self supporting and leave with the business public those vast sums of money now required for dividends upon capital, both actual and fictitious, and interest upon huge bond issues, largely used to acquire competing lines, and dominate the traffic of whole sections of the Union.

No one nowadays will seriously assert that our postal affairs should be relegated to the tender mercies of private control, nor that the Government should administer them as a source of public revenue. Yet it is just as consistent, and as reasonable to so contend, as to seek to justify the notion that the great lines of railway over which our mails are carried, and distributed

in common with passengers and general traffic, should be owned and controlled as they now are. Indeed the saving in railway mail contracts would very largely reduce the cost of operation, thus permitting an appreciable reduction in traffic rates. In Germany, railway mail carriage always shows a profit, instead of a decided loss as with us.

Government ownership would stabilize both rates and cost of operation. Being devoted to service and not to profit, wages would not be affected by business depressions, thru decrease of traffic. On the other hand, rates could be reduced if the times required it without a corresponding or any reduction of the wage scale. And the prodigious salaries now paid to managers, directors and other officials of the company would be eliminated by the payment of fair compensation for competent management.

**T**HE element of preparedness enters largely into the problem of government ownership. No plan of national defense is complete without it. German military efficiency is largely due to the national system of railways, which were taken over years ago, and equipped and extended for the primary purposes of war and industry. Some military experts have contended that the French victory at the Marne was due to the inability of the Belgian railways to transport Germany's vast military supplies to the front at the critical moment. The difficulties confronting the War Department last June, when the transportation of less than 100,000 men and munitions to the Mexican border was necessary, presents a mild picture of its helplessness if two or three times that number of men were required at some vital point at a time of great emergency. We might be thoroly prepared in all other respects, yet meet with disaster thru tedious mobilization, due to private ownership of the national highways. England's first step after declaring war in August, 1914, was to take possession of its railways. France did likewise. These nations have since then used them both as agencies of war and as handmaids of commerce. Their administration of all traffic movements has given full satisfaction. Private discriminations and inequalities of service have been eliminated.

So successful is the new regime that it may be safely predicted that private ownership of national highways in these great nations has gone, never to return. They will hereafter retain dominion over them and administer them as governmental agencies in common with the mails, foreign affairs, and the admiralty.

I am aware of the contention that the high efficiency of management under private ownership is not possible under democratic institutions. In a sense this may be true. But on the other hand the financial side of private management could not be worse under public administration. Moreover, we have managed the roads in the Philippines,

and upon the Isthmus, some steamship lines, and the telegraph lines of Alaska, fairly well. Our postal service yields an occasional profit now and then, and I feel sure that the men who now operate the trunk lines for their owners would be quite as efficient in the same capacity if they were officers of the Government.

**O**F course the Government could acquire the railways only by paying for them, and it is said that the cost would be colossal. But the bondholders own the roads, and government assumption of bond issues would not sensibly increase the public burdens. For the people pay the interest as they will pay the principal of this debt thru traffic rates, if it is ever paid at all. And the annual net profit of operation by the Government, instead of being distributed as dividends, would rapidly liquidate this debt, whereupon rates could be lowered to the mere cost of maintenance and operation.

I do not advocate government ownership of railroads as an ideal, or even as a desirable policy, if a better one were available. It encounters grave objections, and possibly it may not stand the test of experience; but I know of no other alternative. Public control of some sort is admittedly essential, and divided control by a national and forty-eight state commissions is a manifest impossibility.

Control by national commission alone, if that end could be attained, would fail, if it were not complete, and it must be incomplete so long as operation is in the hands of private owners, yielding sullen and reluctant submission to its mandates.

Far-seeing railway men long ago began to advocate national incorporation of railway companies, with enlarged control by the Interstate Commerce Commission. They have been driven to this position partly by the conflicting requirements of the state authorities, and partly by the growing convictions of the people that the roads are an indispensable agency of government, and therefore essential to efficient and satisfactory public administration; that no strictly public function should be delegated to private ownership or control, much less made the basis of private gain.

Public ownership of railways seems to me inevitable. It will not come at once. It should not come abruptly. But it is as certain as any future event can be which depends upon human agencies for its accomplishment.

Limitations of space have made it possible only to sketch in outline, without attempting to discuss some of the considerations which seem to justify or require the public ownership of our transportation agencies. Concluding the subject it may be said that they apply quite as insistently to the acquisition of our telegraph and telephone systems. They are all governmental agencies, analogous in character, and essential each to the others for their full and fair operation and development.

"Tea-diggers" may be the official title of the men in these trenches who are blending 48,000 pounds of tea for the army

These paintings from the National Academy exhibition are of three distinct types. The bright portrait of "Elizabeth," by Mary D. Page, won the Julia B. Shaw Prize; "A Vision of the Past," by E. I. Couse, the second Altman Prize

Photographed by Peter Foley

Few reproductions of the beauty of the Palace of Fine Arts at the Panama-Pacific Exposition are so satisfying both in line and color as Colin Campbell Cooper's painting of iridescent reflections and white pillars against a gray-blue sky

# THE DIVINE SARAH

BY MONTROSE J. MOSES

AUTHOR OF "THE AMERICAN DRAMATIST"

**T**HERE is no longer any humor attached to the "Farewell" performance of Sarah Bernhardt. She comes to us from France—her veritable last tour of America—not so much as an actress in the theatrical sense, as a flame, a symbol, of her country's past glory and of its present spiritual crisis.

Her several trips to the United States, in the past, have always been attended with a certain glare and notoriety, which have added curiosity to whatever desire theatregoers may have had to see the "Divine Sarah"—the actress who held all Paris in the palm of her hand; who, at the height of her most picturesque temper, could defy the Comédie Française, could break contracts with the Odéon, and direct the pen of most of the dramatic writers of her time, making crowned heads dance attendance on her will.

That was the Sarah of bygone days—Sarah at the height of her Sardou power, her splendid emotionalism. That was the day when actresses in all parts of the world looked askance at her with jealousy.

**H**ERETOFORE Sarah Bernhardt has come to us heralded by all sorts of odd experiences, characteristic of actresses seeking press exploitation. She was a law unto herself, up to the time she passed the middle age of life. She horse-whipped one of her associates in her company. She boxed the ears of one of the most honorable Sociétaires in the Comédie. She dictated her terms to the playwright, Augier, making him follow her about with his manuscripts.

Then it was that Sarah Bernhardt, having gained the position of being one of the most superb technicians of the day, also gained control of herself, fought for her ideals, saw deeper into the art she was upholding, and even went so far as to take a stand against organized business in the theater by fighting the New York Theatrical Trust when she came on one of her visits to America. So the years advanced, and those who were her contemporaries passed from the theatrical horizon. But Sarah Bernhardt still held—the one great "star" in a firmament all but dimmed.

In her long career she had met adversity and had arisen above it. She had met scandal and pushed it aside. She had lost fortunes and built them up again. And now she comes to America, physically disabled and yet, thru the sheer power of her genius, rising above it all. Imagine an actress, past her seventy-second year, with one leg amputated, with a spirit sorely distressed over the fate of her country, with a full knowledge of what she has been and what she is, still moving audiences to tears, still wringing their hearts with that simple, sure technique which has held the stage for over fifty years!

As the curtain rose, I took her for the embodiment of all France's greatness in art, from the time when, as a little girl, she caught sight of Rachel at the Conservatoire, to the recent time when she was the recipient of the Legion of Honor from the President of the Republic, bringing a taste of her love for art to the battlefield when she played in some one-act plays before the soldiers of France. I could not help but feel, as I caught a glimpse of her for the first time in many years, that here was a woman who, in her presence, represented all that is finest in the history of literary France. That is the interesting thing about the actors and actresses of France: the theater is so closely related to the political, social, and artistic life of the times, that an actress brought up in the house of Molière, however uneducated she may be, is invariably carried to an intellectual pitch thru association with the greatest minds of her period.

**I**T is this tradition which Madame Bernhardt brought before me vividly as the curtain rose on a specially written one-act piece, by her son, and entitled "Hécube." One could never have realized her physical disability as this great actress, with her very distinctive powers of reading, sat in her chair and gave us an idea of the mother of Hector, representative of all the mothers of France, sacrificing their sons for the cause of the nation. Madame Bernhardt was there for a patriotic purpose. She was there as a flaming representative of her country's sacrifice. And her voice, still unbroken, still wonderfully modulated, with an accent that was unmistakable, brought back vividly the memories of former days.

The second piece, written by one of the soldiers on the battlefield, "somewhere in France," was itself aimed for the distinct purpose of racking the heart, and firing the blood with patriotic emotion. Then followed Victor Hugo's "Patrie," introduced into this little specially constructed "vaudeville," with Deroulède's poem, "Au Porte-Drapeau," and ending with one of Bernhardt's inimitable death-scenes, her last words, "Vive l'Angleterre! Vive la France!", drowned in the thunders of applause which raised the whole audience to its feet.

Madame Bernhardt has brought to America numberless pieces, which are so constructed that she may act while seated, in order to overcome her physical disability. One does not realize this, so marvelously is one touched by the varied splendor of her art. There is still about Sarah Bernhardt the wonderful sweep of gesture. There is still the glory of color in her costume. There is still the careful attention to detail.

Looking over the criticisms of her work during her many visits to America in the past, we are surprised to find the American critics more or less

reserved in their appreciation. And in view of all that she represents, we have to smile over some of the harsh judgments placed upon her. Even in her seventy-two years, we see in Sarah Bernhardt one who, tho limited by age, nevertheless so far overtops the best we have in the theater today, so far surpasses in technique, in emotional fire, the biggest "star" holding public attention, that we cannot write carping criticism about something that has now become an established fact in theatrical history.

**I**T may be that in her earlier days, as one critic has said, the "Divine Sarah" was unable to touch the higher spiritual emotions, that she was unable to convey the passion of her character to her audience, but rather called forth from that audience a type of passion of the most unhealthy kind. It may be that in the supprest, gentle, simple emotions she was not at her best, her *métier* being more in a colorful, romantic direction. Yet, judging the Sarah Bernhardt that we see today, we would say that a change has indeed fallen upon her, the same change which she herself noted among her countrymen when, a few months ago, she walked on the battlefield among the soldiers of France. For she has written of her experiences in a way worthy to stand as measure of her feeling today.

"I learned much more than I could teach them from my trip to the front," she says. "Altho fear of death has long ago left me, because when one is of a certain age death is of no consequence; I learned from those men with blood showing from their wounds, on their faces, that a new epoch in the 'histoire humaine' of the world had been reached. We have arrived at the epoch in the history of the world when fear of death is no more. The courage of thousands upon thousands involved in this war has spread the moral influence of this defiance of death in the trenches. It is felt everywhere. It was an influence that seized me there among those men of France, whom I saw so wonderfully spiritualized by their release from fear."

Bernhardt has lived thru two wars. During the Franco-Prussian conflict she turned the Théâtre Odéon into a hospital. And today, she has turned her own theater to the same purpose—always the patriot to be counted upon. It is that mixture of patriotism and of artistic lawlessness which dominates her "Reminiscences," published several years ago. And neither of these qualities have the years been able to dim.

Yes, it was a touching experience to go on the battlefield of art and see such a wonderful soldier, such a wonderful representative of all that is best in theatrical France, at her post and having no fear of the future.

A PLEA FOR THE MOTHERS OF FRANCE  
"THERE IS STILL ABOUT SARAH BERNHARDT THE  
WONDERFUL SWEET OF GESTURE,  
THE GLORY OF COLOR"

# A PAGE FROM AMERICA'S PSALTER

BY WILLARD WATTLES

Across the bitter centuries I hear the wail of men:  
"Oh, would that Jesus Lord, the Christ, would come  
to us again.

We decorate His altars with a ceremonious pride,  
With all the outward shows of pomp His worship is  
supplied:

Great churches raise their mighty spires to pierce the  
sunlit skies

While in the shadow of the cross we mutter blasphemies.

"We know we do not do His will who lessoned us to pray,  
'Our Father grant within our lives Thy Kingdom rule  
today.'

The prayer he taught us once a week we mouth with  
half-shut eye

While in the charnel-house of words immortal mean-  
ings die.

Above our brothers' frailties we cry 'Unclean! Unclean!'  
And with the hands that served her shame still stone  
the Magdalene.

"We know within our factories that wan-cheeked women reel  
Among the deft and droning belts that spin from wheel to wheel.  
We know that unsexed childhood droops in dull-eyed drudgery.  
The little children that He blessed in far off Galilee,—  
Yet surely, Lord, our hearts would grow more merciful to them,  
If Thou couldst come again to us as once in Bethlehem."

## A PORTABLE CREED

BY PRESTON WILLIAM SLOSSON

EVERYONE who has taken a summer trip to the seaside, or crost the continent to attend a national fair, or gone from home to spend a year at some distant college, knows how hard it is to fill a trunk with everything that is necessary and nothing that isn't. Packing a creed is exactly the same sort of task. It isn't a question of whether all of one's beliefs are true or not, any more than it is a question of whether all of the furniture of your home has or has not a market value. Your toothbrush, razor, collar studs, fountain pen and railroad ticket have another sort of value from your rubber plant, phonograph, plush album, window curtains and plaster cast of the Dying Gladiator. If you neglect to take along any of the five articles first mentioned (you may substitute some other indispensable for the razor if you are of the more fortunate sex that does not require one) your journey will be seriously inconvenienced, but if by oversight or necessity you should forget to take with you some article on the other list, your immediate comfort would hardly be diminished.

Now, in traveling thru this world we cannot afford to overburden the mind with dogmas which, however true, make no real difference to us. Of course no two believers will agree as to just which beliefs are vital, just as no two travelers will agree as to just what should be taken on a journey. But the point is that every wise man makes some selection. Few of us now are much exercised over the question which divided the Church for centuries, is God the Father of the *same* or only of *like* substance with God the Son? Yet either the Athanasian or the Arian position may, for all we know, be absolutely true. To many of us it seems equally a matter of indifference whether the nature of Deity is simple, as the Unitarians say, or triune, as the Trinitarians assert; our daily conduct would be in no way altered whichever party proved

to be in the right. Those who pin their faith to such questions as the authorship of the Pentateuch, the capacity of Jonah's whale, the proper method of administering baptism, the maintenance of the apostolic succession are religiously over-equip. They find no real use for the greater part of their creed; it only gets in their way and sets them to worrying for fear they will lose some of it. The most to be pitied of all are those who have laden themselves with a long string of negative propositions, a creed with a minus sign before it. It is all right to say that one has never heard satisfactory proof of a miracle, but to go farther and deny the possibility of miracles is to assume a burden of proof which would break the back of any philosopher.

But the man who takes too much with him on a journey is a Solomon compared with the man who takes nothing. Some questions are at once big enough and practical enough to absorb our keenest attention; indeed life itself can hardly go on to any purpose until we have arrived at some sort of answer to them. This is especially true of the two great questions of value: "Is life worth living?" and "If life is sacred, are individual lives also sacred?" If you answer the first question in the negative you have condemned the life and growth which the Christian calls good and enlisted in the cause of death and decay, which all good men know to be that of the Devil. If you answer the second question in the negative, you agree with Nietzsche that the welfare of the many should be sacrificed to the benefit of the chosen few, or else with some extreme collectivists who hold that if the species as a whole makes progress injustice to the individual does not matter. In either case you are at war with the Christian Church, which has always taught that every soul has an infinite value in the sight of God. Incidentally, you must oppose the political creed of the western world that every citizen is equal in the sight of the law.

Passing from questions of value to questions of fact, the biggest question that confronts us is: "Are human beings alone in the desire for a fuller, freer, more abundant life, or is there any element in the universe that wills it with us and thru us?" The Christian returns to this question an emphatic affirmative. A negative answer is returned by the materialist, who denies the existence of a Purpose in things, by the Epicurean philosopher, who admits the existence of the gods but not their care for man, and by the Buddhist or pantheist, to whom God is but an algebraic expression for the unity of the universe. Another vitally important question of fact is this: "What does personality signify?" If each personality is a unique reality in the universe we may assign to it immortality, freedom, moral responsibility and infinite capacity for growth. This is the Christian position and it is mine.

This, then, is the content of my creed. It contains every belief for which I have as yet found a use and there is nothing in it which I could do without. Since on all these vital issues I found that the Christian Church had formulated my convictions many centuries before I was born, I have always considered it my duty to work with the Christian Church as an organization. Unfortunately, but few denominations admit anyone so lightly equipt as I in the matter of creed. Therefore I had to join the Congregational Church, which (together with its baby brother, the Unitarian) is not only the most liberal in theology, but in its form of government is the most democratic institution in existence. The radical anticlerical who writes for the *Masses* and never goes to church is certain that Christianity is a mere bulwark of reaction. I who do go to church know that ten thousand years from now civil government may be on as free and popular a basis as the present Congregational polity, but hardly until then.

New York City

EDGAR LEE MASTERS

The poet of the Middle West and of Spoon River Churchyard

**I**F one should pick the half dozen American poets whose work today showed most originality and leadership, Edgar Lee Masters, Robert Frost, James Oppenheim and Amy Lowell would certainly be among them. It happens that each of them has just published a new book of verse, and it is interesting to compare the four collections.

Neither Mr. Masters nor Mr. Frost is to be ranked primarily with the vers librists, tho Mr. Masters used the form in the "Anthology" and turns to it frequently. Both men handle verse flexibly, but the wide spiritual difference between them is somewhat reflected in their versification. Mr. Masters uses standard rhythms much as he uses free verse, with a cold steadiness of stride. His thought seems independent of his meter, but only because of its ironical persistence, and not because of any verbal fluidity. Mr. Frost, on the other hand, takes a familiar rhythm and breaks down its regularity, reproduc-

## FOUR PIONEER POETS

BY GEDDES SMITH

ing so carefully the cadences of conversation—and thoroly colloquial conversation at that—as Mr. George H. Browne pointed out in *The Independent* for May 22, 1916, that he mellows the whole body of his verse and gives it a singular friendliness.

Masters has deliberately chosen to be the poet of Chicago and the Middle West, as Frost has chosen New England. And there is a touch of hardness, aloofness, about him that is at the opposite pole from Frost's neighborliness, and that expresses the city more perfectly than any specific description could do. He is probing for emotional fundamentals, using certain phases of American life as his laboratory material, much as Browning worked with specimens borrowed from Italy. He excels in the picturing of the sordid and the tragic, and few poets have so completely stripped even tragedy of its glamour. In *The Great Valley* there are vivid portraits of men and women in whom joy has turned to bitterness and life to sodden ashes. Cato Braden is a superb history of a failure, distinctive because Masters, with his keen interest in the community soul, has grasped the broad satirical background of his man's life. We have space only for a partial quotation:

We'll then  
The years went on. And every day at eight  
He could be seen toward his office bent.  
And half past ten just as the morning train  
Was whistling for the crossing he would go  
To get the mail. Returning he would walk  
Along Main Street, slapping the folded  
*News*

Against his leg. He scanned it in his office.  
At twelve o'clock he went to dinner, then  
As whisky made him eat, he over-ate  
And took a nap till two o'clock. At three  
One might discover him at solitaire—  
He had clipped from the morning paper  
quite enough  
To keep the boys in copy. Then at four  
He might be sitting at the livery stable,  
Or sometimes might be found in that back  
room  
Of Little's restaurant, where a keg of beer  
Shipped in was being tapped. At night  
perhaps  
He might be seen down there on Locust  
Street,  
Waiting to enter where the milliner lived.  
So passed his life away from twenty-four  
To fifty-one. It's simple enough to ask  
Why not write for the *Eagle*, make it  
better,  
Give ideas to the people, help the town,  
Refresh the mind, read, study history,  
Be Senectute? Fancy Teddy Roosevelt.  
Who's labored for this land with restless  
gifts,  
Tied down in Winston Prairie—Well, you  
can't.  
He'd break the ties, and that's the point,  
you see.

For Cato couldn't break them, had to stay,  
Incapable to extract the good that's here,  
Susceptible to all the bad that's here;  
He was a nose half active  
Who enters in a room where gas escapes,

A PIONEER IN VERS LIBRE

Amy Lowell writes rimed verse and "polyphonic prose," too

Sits in the room unconscious of the gas  
Till he grows sluggish, lies down to rest  
And dies unknowing. So I say it's true  
That Winston Prairie ruined Cato Braden  
And killed him in the end.

As a whole Masters is probably more depressing than any poet of equal power in American letters, but it would be unfair to ignore the poems which strike a different note. There is an interesting attempt to celebrate the local history of Chicago, and there are several penetrating comments in Mr. Masters' own psychoanalytic vein on the personality of Lincoln and on the essential meanings of the issues with which Lincoln wrestled. A few—a very few—poems sketch happier emotional adventures, such as that of Emily Brouseau.

Frost is far from Masters. Much of what he has to say is frankly agreeable conversation about the New England countryside, and he carries the burden of human emotion far more lightly than the Westerner. We suspect that a good

THE POET OF NEW ENGLAND FOLKS

There is neighborliness and the flavor of outdoors in Robert Frost's verse

JAMES OPPENHEIM

Who writes the philosophy of youth in "War and Laughter"

## There's Joy and Health In Motor Boating And Motor Contentment in a Gray Engine

Zip! Over the wave crests you leap tossing the silvery spray high in the air and filling your lungs with pure invigorating ozone. No dust, no traffic laws or speed limits, and no discomforting jarring over hot, uneven roads. Instead, all is cool and refreshing. Tucked away out-of-sight somewhere your powerful motor propels you steadily, smoothly and noiselessly. The tonic and charm of the water is yours.

Such is motor boating with a Gray Motor. It doesn't matter whether your boat is large or small, fast or of moderate speed, simple or elaborate, you find the same exhilaration and pure joy—and there's a Gray for every boat. Twelve sizes, two and four cycle, three to ninety horse power, all of highest quality, absolute reliability, and moderate price—there's a Gray just suited to your requirements.

Ownership of a Gray motor implies a recognition of the highest quality, the most scientific design and workmanship, and the widest margin of safety to be obtained in a marine motor. The 1917 Grays are ready. Early season orders were never heavier. Order now and avoid disappointment on delivery when the season opens. Immediate shipment for Southern service may be had on any model. Let us forward the three Gray Books to you and place the services of our experts at your disposal.

**GRAY MOTOR CO., 1256 Oakland Ave., Detroit, Mich.**

many people fail to enjoy Frost as much as they might thru excessive zeal for hidden philosophy. But even so, there are one or two things in *Mountain Interval* which seem too casual and too vague in appeal for inclusion in a volume by so true a poet. Mr. Frost has a fine and sympathetic way of expressing the reactions of lonely and tired women to the stress of country life; that was the basis of some of the most telling poems in "North of Boston" and it reappears in *The Hill Wife*, from which we quote a vivid fragment:

### *The Oft-Repeated Dream*

She had no saying dark enough  
For the dark pine that kept  
For ever trying the window-latch  
Of the room where they slept.

The tireless but ineffectual hands  
That with every futile pass  
Made the great tree seem as a little bird  
Before the mystery of glass!

It never had been inside the room,  
And only one of the two  
Was afraid in an oft-repeated dream  
Of what the tree might do.

There is no single poem in this group so poignant as three or four in "North of Boston," but such things as *In the Home Stretch*, for domestic drama, *The Telephone*, for dainty fancy, and *Birches*, for genial outdoor flavor, rank well with what Mr. Frost has given us hitherto. A few lines from *Birches*:

He always kept his poise  
To the top branches, climbing carefully  
With the same pains you use to fill a cup  
Up to the brim, and even above the brim.  
Then he flung outward, feet first, with a  
swish,

Kicking his way down thru the air to the  
ground.

So was I once myself a swinger of birches.  
And so I dream of going back to be.  
It's when I'm weary of considerations,  
And life is too much like a pathless wood  
Where your face burns and tickles with  
the cobwebs

Broken across it, and one eye is weeping  
From a twig's having lashed across it open.  
I'd like to get away from earth awhile  
And then come back to it and begin over.

I'd like to go by climbing a birch tree,  
And climb black branches up a snow-white  
trunk

Toward heaven, till the tree could bear no  
more,

But dipped its top and set me down again.  
That would be good both going and com-  
ing back.

One could do worse than be a swinger of  
birches.

When we turn to James Oppenheim and Amy Lowell we are in the vanguard of the vers librists, but the two poets are doing quite different things with the new form. Miss Lowell uses vers libre chiefly as the vehicle by which she hopes to conduct poetry along new paths. Mr. Oppenheim uses it merely because he wants to write poetry of a sort to which we are accustomed, in a more direct, spontaneous and flexible way than is possible in formal meter. As Amy Lowell put it in the preface to "Sword Blades and Poppy Seed," he is "quintessentializing" thought and emotion. That is, by arranging his ideas according to the fluid cadences of free verse, he is speaking more vividly and striking harder at the thought than he could if he bent them to the more artificial requirements of familiar rhythms. So Mr. Oppenheim, in whom the very

# Gymnastic Finger Training That Doubles Typewriting Speed

*A wonderful new method of acquiring speed and accuracy in typewriting; 80 to 100 words a minute now easy for anyone; how it has doubled and trebled stenographers' Salaries*

By FRANK J. SIMMONS

**I**N Europe, and in America for many years it has been a regular part of every musician's training to take special gymnastic finger exercises. Teachers would no more expect their pupils to become good pianists without special finger exercises, than they would expect them to play without first learning to read notes.

Now for the first time has this principle of gymnastic finger training been applied to typewriting. Its necessity is proved by the fact that the one great difficulty which handicaps ninety-nine out of every hundred stenographers is their inability to gain full control of their *finger movements*.

*Strengthening the finger muscles*

The average stenographer typewrites thirty to forty words a minute. A "trained finger" operator can typewrite eighty to one hundred words a minute, without errors and with amazing ease. There you have the reason for the difference in salaries paid to stenographers. A fifty-word-a-minute gain in typewriting speed must mean a vast increase in the amount of finished work

turned out in a given time.

And since employers pay for nothing in the world except quantity and quality of work produced, it is obvious that no matter how good a stenographer may be at shorthand, he or she can never expect much increase in pay until speed, real speed and accuracy on the typewriter are acquired.

*Simple exercises practised away from machine, that double typewriting speed*

## The New Way in Typewriting

*Making each finger independent*

The trouble in the past, from the stenographer's standpoint, has been that there was no successful method of training the fingers to secure high speed and accuracy in typewriting. Piano exercises were useless for typewriting needs—they were designed to secure a different kind of result—and they were too hard—took too much time and required too much effort.

It remained for R. E. Tulloss, who is known the country over as among the greatest typewriting authorities of the

present day, to invent a marvelous system of finger exercises which can be learned in only ten remarkable easy lessons, and which with amazing quickness bring this wonderful flexibility, speed and control of the fingers.

Already thousands have adopted the new method with results bordering almost on the miraculous. Many of them were so called "touch writers," others, after years of fruitless effort, had practically given up hope of ever attaining

more than merely average typewriting ability, many had taken other courses, with no marked increase in speed—yet, by the New Way practically without exception, they all have developed the remarkable speed of eighty to one hundred words a minute.

## Raising Stenographers' Salaries

That this New Way in Typewriting raises salaries of stenographers is shown by actual figures given in the letters written to Mr. Tulloss by hundreds of stenographers. For example, Mr. John H. Marquette of Smith's Falls, Ont., never averaged more than forty to forty-five words per minute until he began to typewrite the New Way. His speed quickly increased and soon he was typewriting at the phenomenal speed of 85 to 90 words a minute from shorthand notes and as a result of this increased speed in typewriting, his salary was raised 20 per cent and within a few months 20 per cent more. As Mr. Marquette says, he is now earning about twice as much as any of the other 14 stenographers in his office.

Then there is the story of Miss Anna S. Cubbinson of Harrisburg, Pa., who writes—

*In a few days you notice the difference*

"I am today filling the position of Chief Clerk to the Department of Parks in this city, my salary being exactly double what it was when I took up the study of the New Way in Typewriting."

A. H. Gardiner of Madison, Wis., was getting \$70 per month when he began the study of the New Way in Typewriting. In a remarkably short space of time he increased his speed from 50 words a minute to 80 words and his salary jumped to \$150 a month—more than double what it was.

I could go on and give hundreds of other instances of the remarkable results achieved through the speed and accuracy acquired by typewriting the New Way. But the school has prepared a remarkable book, for free distribution, which goes into detail and reproduces many other letters which bear out the claims made for Mr. Tulloss' system.

## Amazing Book Free

This interesting book is brimful of eye-opening ideas and valuable information. It explains how this unique new method will quickly make your fingers *strong and dextrous*, bring them under *perfect control*, make them extremely rapid in their movements—how in a few short weeks you can transform your typewriting and make it *easy, accurate and amazingly speedy*.

If you are ambitious to get ahead—if you want to make your work easier—if you want to get more money in your pay envelope—don't wait a single moment before sending for this book of information and proof.

This new method is bringing such marvelous results to others—is proving itself to be so sure a means of quickly increasing salaries—that you will be doing yourself a big injustice if you fail to write for it *at once*. Just send a postal card request *now* to The Tulloss School, 3812 College Hill, Springfield, Ohio, and your copy will be sent by return mail without cost or obligation. Do this now, before you turn this page.

*For speed in striking the keys*

Address .....

essence of young love in the open air seems to have lodged, gives us a group of love-poems so fresh and full of tang that they fairly vibrate. They are not all very coherent—but need they be?

The philosophy of his *War and Laughter* is a strongly personal variation of what might be called the dominant creed of the younger poets: man is god, and by asserting his own nobility he can redeem self and the cosmos—except in so far as blind forces render all effort futile. Mr. Oppenheim interprets this as a call to triumph over destiny thru humor—laughter. All this is mingled with kindly satire on the race in general, terse sketches of cosmic history, pungent but not altogether consistent comments on the war (for he is moved alternately by the folly and the efficacy of war), and several curious pieces of symbolism. The poems, taken together, are singularly electric; free verse here has accomplished notably the "quintessentializing" of thought and feeling.

In two or three cases Mr. Oppenheim has echoed the familiar rhythms of the Psalms so perfectly that one is led to suggest a prescription for those who "can't see anything" in free verse: reading the Psalms aloud, from some edition in which they are printed in stanzaic and not in the standard "verses," until one becomes convinced of the validity of irregular cadences.

It is hardly fair to quote, from a book which is largely serious, the following poem, but it expresses one of Mr. Oppenheim's prevailing moods so charmingly that we do so nevertheless:

### Immoral

I keep walking around myself, mouth open  
with amazement:  
For by all the ethical rules of life, I ought  
to be solemn and sad.  
But, look you, I am bursting with joy.  
I scold myself:  
I say: Boy, your work has gone to pot:  
You have scarcely enough money to last  
out the week:  
And think of your responsibilities!  
Whereupon, my heart bubbles over,  
I puff on my pipe, and think how solemnly  
the world goes by my window,  
And how childish people are, wrinkling  
their foreheads over groceries and rent.  
For here jets life fresh and stinging in the  
vivid air:  
The wind laughs to the jovial Earth:  
The day is keen with Autumn's fine flavor  
of having done the year's work:  
Earth, in her festival, calls her children to  
the crimson revels.  
The trees are a drunken riot: the sunshine  
is dazzling . . .  
Yes, I ought, I suppose, to be saddened  
and tragic:  
But joy drops from me like ripe apples.

All this, clearly, differs in form rather than function from the older poetry. But with Amy Lowell the case is different. It should be said at once that much of *Men, Women and Ghosts* is written in conventional meters, sometimes in ingenious combination with free verse interludes, as in the poem where she uses free verse to suggest the playing of a violin here and there in the course of a narrative written in formal stanzas. But the distinctive quality of the book—and one which is noticeably stronger than in Miss Lowell's last volume—is in the attempt

## ***Winter Reading***

should result in a sense of enrichment. How good is the prospect of long evenings and week ends, as we look forward to them at the approach of the fireside time of year! Even the odd moments, during the winter season, will yield so much of instruction, of arousement, and of new outlook! Books are so accessible, nowadays, so endless in their variety, and so easy to carry about in the hand or the pocket! The time of year for good reading is a welcome season.

Yes! But did you ever come out a little lean in the spring? When you looked back upon a winter of priceless opportunities for increase of knowledge and for mental toning up, did you ever realize that you had read a little of everything, and not much of anything, or perhaps a good deal of things that are not very filling? It is a common experience of those who do not stock up with good provisions for the mind.

Why not, this winter, plan ahead for feeding yourself intellectually on something worth while, as definitely as a thrifty householder looks out for the flour barrel or the coal bin?

## ***Read a Course***

that has been expertly planned, with a recognition of solemn responsibility to make it worthy, because the leisure hours of men and women are precious, yet with a sane remembrance of the need to make it enticing, because otherwise few would take it. The Chautauqua Course is so planned, on the basis of forty years' experience. Thousands of your clan, guild, cult, complexion, and time of life have profited by it. So you, with all your advantages or limitations, would doubtless find it suited to your needs. The course for this winter deals with a group of subjects all related to the continent now swept by war, under the slogan, "The Hope of Europe." There are four years in a complete cycle, leading to graduation for those who persevere; but one year at a time (\$5) is the principle, and each year to stand on its own merits. A circular and order blank will be mailed you, if you write for it.

## At the Rainbow's End

is Nassau-Bahamas, a quaintly foreign colony, wonderfully rich in the romantic strangeness and astounding color of the Tropics.

From December to April the climate is that of June, while but a short distance away, cities in the United States are being racked unceasingly by storm.

Wouldn't a month or two in Nassau with its marvelous surf bathing, big game fishing, tennis and golf—be a holiday to remember?

Wouldn't you come home wonderfully "fit"?

Write today for "Nassau-Bahamas" and Hotel, Boarding House and Furnished Villa Register. The time to go is this winter, and the time to plan is NOW.

## BERMUDA PRINCESS HOTEL

New Ocean Hotel location and equipment on the Islands. Modern, air-conditioned, 6000 rooms, tiled swimming pool, tennis, golf, and yacht club. South beach, saddle riding, golf, and tennis. 48 hours from New York. S. S. Line of Queen S. S. Co. 27 Broadway, N. Y. HOWE & TWOROGER Mgrs., Hamilton, Bermuda.

to push language into largely unexplored fields. Her work parallels some of the confusing experiments of modern painting. She wants to express musical sound and cadence in words, sound in terms of color, color in terms of sound and motion. Sometimes she succeeds admirably. To take a minor example, we quote from Thompson's Lunch Room, originally published in The Independent for August 28, last:

Dropping on the white counter like horn notes

Thru a web of violins  
The flat yellow lights of oranges  
The cube-red splashes of apples  
In high plated épergnes.

A spoon falls upon the floor with the impact of metal striking stone,  
And the sound throws across the room  
Sharp, invisible zigzags  
Of silver.

Her method is sometimes much like that of the Impressionists, who painted light by laying fragments of pure color side by side. Thus in The Aquarium, and in some of the "polyphonic prose," she gets the result she wants by what she calls the "unrelated" method, stringing words and phrases together in a sort of ejaculatory way, without grammatical ties of any sort. As a dramatic device, and in certain special fields of description, the method undoubtedly works. We can quote only the beginning of An Aquarium:

### An Aquarium

Streaks of green and yellow iridescence,  
Silver shiftings,  
Rings veering out of rings,  
Silver—gold—  
Grey-green opaqueness sliding down,  
With sharp white bubbles  
Shooting and dancing,  
Flinging quickly outward. . . .

The "polyphonic prose," like the modernist paintings in which color and form have forgotten which is which, hovers uncertainly on the borderline between verse and prose. Undoubtedly it carries vigorous imaginative conceptions well, but the ordinary reader would be hard put to it to classify the result. It is probably less important to pin it into one category or the other than to estimate its effectiveness *per se*, and for such special uses as the eerie ghostliness of The Crossroads, or the onomatopœia of The Bombardment, it is obviously appropriate. One feels that perhaps Miss Lowell attempts to use it too often.

The keen sensitiveness to color which Miss Lowell shows sometimes leads her into metaphorical extravagances where the reader is reluctant to follow, but it does give a richness and vigor to her narratives and dramatic monologues that makes them distinctive, tho as a whole they are neither so passionate as Masters' nor so curiously intimate as Frost's. As for the war, she writes much more successfully of the Napoleonic era than of our own, but Patterns, the poem with which the book opens, is a superb vignette of the eternal tragedy of the woman left at home.

The Great Valley, by Edgar Lee Masters, The Macmillan Co. \$1.50. Mountain Interval, by Robert Frost, Henry Holt & Co. \$1.25. War and Laughter, by James Oppenheim, The Century Co. \$1.25. Men, Women and Ghosts, by Amy Lowell, The Macmillan Co.

## Could You Fill His Shoes?

Suppose a good job were open where you work. Could you fill it? Could you jump right in and make good? Or would the boss have to pass you up because you lacked training?

Don't take chances on being promoted. If you want a job that pays good money, get ready for it.

Pick out the job you want in the work you like best. Then start *right now* to get, through the International Correspondence Schools, the training that will prepare you to hold it.

Thousands of men have advanced through I. C. S. training to the very jobs they wanted. What these men have done you can do. All the I. C. S. asks is the chance to help you. No matter where you live, the I. C. S. will come to you and train you in your spare time.

The job you want is within your reach. I. C. S. training will win it for you. The thing to do now is to make your start. Here's the coupon—mark and mail it now.

I. C. S., Box 4532, Scranton, Pa.

institutions that specialize in research along your line or kindred lines. We mention a few: Carnegie Station for Experimental Evolution, Cold Spring Harbor, New York; U. S. Marine Biological Laboratory, Woods Hole, Massachusetts; Rockefeller Institute, Sixty-sixth street and Avenue A, New York; Life Extension Institute, 25 West Forty-fifth street, New York; and some of the agricultural experiment stations at leading colleges, principally state universities. Could you not retain your position as teacher, then by spare time and study and summer experimental work train yourself for a new field at one of these institutions? You would stand a better chance if you took a secretarial or business course first, and were thus able to do the necessary work of an office. The health boards of New York, Chicago, and other large cities now make investigations and reports wherein you might serve. Get their bulletins.

364. Mr. A. G. S., Nanking, China. "I am writing to ask you for the names of a few of the books you say ought to be read by every housewife. I am an engineer and can appreciate what the study of books on Household Engineering can mean to a housewife. I want my wife to have them."

We congratulate you on your open-mindedness and far-sightedness—only a rare man thinks to provide as good facilities for his wife's work as he does for his own. We trust that your wife may soon become a missionary for the efficiency gospel in China, where it is so much needed.

A few modern books: "The New Housekeeping," by Christine Frederick; "Principles of Domestic Engineering," by Mary Pattison; "Home Economics," by Maria Parloa; "The Efficient Kitchen," by Georgie Boynton Child; all may be had from Efficiency Publishing Company, Woolworth Building, New York. We refer you also to home economics publications of Teachers' College, Columbia University, New York City; of Cornell University, Ithaca, New York; of American Home Economics Association, Station N, Baltimore, Maryland.

365. Mr. F. J. M., Rhode Island. "What are the possibilities for a young man with some capital in South American trade? Would he be willing to go to South America if opportunity offers. Is there a field in cities like Buenos Ayres and Rio de Janeiro for an American with energy and some brains, and I believe some ability for business? Is there a school or course that teaches South American business methods?"

(a) South America is comparatively a new field for the American business man, tho a vast and fertile one. Before the war, Germany, France, and England practically controlled the business of our sister republics. Write the National City Bank, Wall street, New York City, for details as to opportunities and possibilities. Mr. Vanderlip, the president of the bank, has inaugurated an efficiency system of education in connection with South American business. Write to the office of Secretary of State at Washington and secure the Consular Report, concerning business opportunities in South America.

(b) I am informed that the National City Bank has also started a school for teaching young men how to do business in South America.

366. A Southern Woman. "It is evident from my weekly reading of the Question Box that any and all persons with problems on any and all subjects apply to you for aid: it is equally evident that your aid is most satisfactory. A woman of fifty-six, daughter of parents with heart disease and tuberculosis, has been from babyhood irritable, noisy, ungovernable, erratic, temper and self-will out-running all other traits. Energy remarkable; mania to earn money, and to be praised for her good looks—these two influences only means of reaching and calming her. Loves to cook, do dairy work, raise chickens, has always wanted to take boarders. Elder sister, conservative, well off, won't allow such activities, tho need is imperative, to keep afflicted sister occupied and sane. What can be done?"

The person to be cured is the elder sister—false pride is worse than bad heredity. Show this woman how responsible she is for her sister's dementia, by withholding the means of possible recovery. Let the victim of temperament do what she wants to keep boarders, raise chickens, make butter and bake bread. Arrange to sell her products thru local dealers. Counsel and cooperate with her, till her pride in her work is strong enough to quell or absorb her headish temper.

ORGANIZED A. D. 1720

# The London Assurance

(FIRE)

CHARLES L. CASE  
MANAGER

84 William Street

New York

After studying books on practical psychology, explain to her how ugly feelings leave their mark on the face, and will finally destroy her good looks.

A position as housekeeper for doctor or sanitarium would be worth considering—ask your physician for names and addresses, with advice on way to apply suggestive therapeutics, would probably aid recovery—any doctor should know authorities.

367. Miss D. H. G., New York. "I am a young woman of twenty-four, well educated, with some literary ability which I am anxious to develop. Meanwhile I must earn my living. (a) How can I bring my wares to market? (b) How does one get regular newspaper or magazine work to do? (c) Would you advise a course at a school of journalism?"

(a) We do not believe your wares quite ready to go to market. A young woman of your age does not know life sufficiently to command the attention of publishers. Why not get a clerical position with a newspaper, magazine, or publishing house, then be earning your living and learning the technical side of literary work at the same time? You could soon master proofreading, typewriting, bookkeeping, filing, or business correspondence—then be ready for a steady job. See answers to similar queries in previous numbers.

(b) By going after it. Select the periodicals you feel you can serve best, write the editors in turn, say what you have done, what you hope to do. Make your letter distinctive. Put your whole self into one typewritten page. Enclose self-address, stamped envelope.

(c) Desirable—not essential.

368. Mr. G. A. M., New York. "I am a widower, have six children four to sixteen years old, all but the youngest going to school yet none working toward a special vocational end. I want to avoid the 'blind alley' peril in education, am specially anxious to discover what the two oldest boys are best fitted for. Where may I secure a blank form or question list, to be filled out by teachers and parents, designed to show clearly what line of work each child ought to follow, and how the start should be made? Such a help would be invaluable to parents situated as I am."

No blank of this kind, reliable and complete, has yet been published. Every home and school should have one for each child—but there is none. You will be able to devise a fairly good question blank yourself, on reading and comparing several books as Riddell's "Human Nature Explained," Parsons' "Choosing a Career," Munsterberg's "Psychology and Industrial Efficiency," Blackford's "Analyzing Character." These books and others may be had from Efficiency Publishing Company, Woolworth Building, New York.

Have you asked your City or State Superintendent of Schools what is being done lately by various high schools to furnish an approximation of vocational guidance to boys and girls? This responsibility lies most with the teachers.

369. Prof. G. D., North Dakota. "I am a teacher, and have been trying for several years to break into journalism. I have written many short stories and articles, with only minor success. I feel that I have the education, the knowledge of the world, and perhaps the ability, for journalistic work. (a) Is there any way of testing one's ability other than the expensive one of volume experience? (b) Where can one get reliable direction, such as criticism of manuscripts and directories of publishers and their wants?"

(a) No sure way. The polish for talent is hardship, and your talent won't shine until you rub it bright on a series of obstacles. If you are great enough, you won't have the time or strength to worry over difficulties; you will climb over them, dig under them, batter them down.

(b) Publishers do not advertise their wants. Believe authors' agents (mentioned previously in these columns) and often criticize your manuscripts, and usually mail them for examination to good publishers. A course in short-story writing, offered by several correspondence schools, would probably aid you materially. The fees of these institutions might be of interest: Authors' League of America; Authors' Service Bureau; Society of Authors and Editors; all of 33 West Forty-second street, New York; Writers' Exchange, 136 Broadway; The Writers' Magazine, 32 Union Square, both of New York.

## Nerves have a Hunger of their Own

*How Sanatogen helps satisfy it*

Amount of phosphorus absorbed by the body under ordinary diet.

Amount of phosphorus absorbed by the body with Sanatogen added to diet.

When Sanatogen was used, the body absorbed 48 per cent. more protein and 63 per cent. more phosphorus.

Amount of protein absorbed by the body under ordinary diet.

Amount of protein absorbed by the body with Sanatogen added to diet.

(From a paper read before the International Congress of Medicine of 1906, by Prof. F. W. Tunncliffe of Kings College, London, published in "Archives Internationales de Pharmacodynamie et de Therapie," 1906.)

**P**ROTEIN and Phosphorus are essential to life. Protein is the true tissue and muscle builder—the life substance with which our bodies must be supplied, or else suffer starvation.

Phosphorus is equally essential—its mission is to nourish nerves and brain. "Without phosphorus, no thought" declares a physiologist, and this is literally true.

A perfectly healthy person extracts sufficient protein and phosphorus from his daily food. But overstrain, worry or nervous shock, by weakening the forces of assimilation, tend to diminish the nourishment of tissues and nerves—slowly to starve them. Starvation for lack of phosphorus means nervous weakness—neurasthenia. Underfed nerves cannot work properly, and since the healthful functions of the stomach depend upon healthy nerve-action, the stomach, too, is upset.

Sanatogen, the food- tonic, was created to meet just such a condition. Sanatogen is purest protein in scientific combination with an organic phosphorus compound

(protected by U. S. Letters Patent). Its protein is of the highest type, and so combined that it is from three to four times as easily digested as the protein of ordinary food. Its phosphorus is readily and completely assimilated. So that Sanatogen carries its nourishment to the cells and tissues of the system with extraordinary quickness.

But it does more. As the illustration shows, it helps the digestive organs get more protein and phosphorus out of the daily food. It goes straight to the famished places in the system and helps other food elements to get there. In this way Sanatogen assists both stomach and nerves and so becomes an ideal food- tonic for sufferers from starved nerves and poor digestion.

Has experience borne out this scientific experiment?

The answer is found in eighteen years' successful use of Sanatogen. It is found in upward of 100 scientific contributions to medical journals and text books which record the splendid results from the use of Sanatogen. It is found in over 21,000 letters from practicing physicians acknowledging Sanatogen's power to build up and to sustain. It is found in the experience of thousands upon thousands of men and women in every sphere of life who have felt the revitalizing influence of Sanatogen upon starved nerves, its beneficial action on digestion, and its soothing and fortifying response to the demands of an impoverished system.

### FREE SAMPLE OFFER

Sanatogen is sold by all good druggists, in three sizes from \$1.00 up. It comes as a fine white powder which can be easily taken dissolved in water, milk, etc. To readers of this magazine a free sample will gladly be sent, together with a charming little book by Richard Le Gallienne entitled "The Art of Living." Address The Bauer Chemical Co., 26R Irving Place, New York.

## A REVIEW OF FINANCE AND TRADE

OUR country has had another year of exceptional prosperity. Industrial activity, revived and stimulated in 1915 by the war in Europe, has become more intense and profitable in the last twelve months. Net earnings of the steel mills, working to the utmost limit of their capacity, have been without precedent. In these mills and the cotton factories wages have been increased three times. Our shipyards have work for two years. There have been scores of extra and special dividends. Altho refining capacity in the copper industry has been increased by 40 per cent, the price of the metal has risen to 35 cents a pound. The average last year was 17½. Railroad earnings have been large. Nearly \$600,000,000 of gold has come into the country. The sum of our loans to foreign nations and cities is now about \$2,000,000,000. Growing exports have made a trade balance in our favor of more than \$3,000,000,000, and the year's shipments to foreign buyers exceed \$5,000,000,000. High prices, due to crop shortage, foreign demand, greater cost of production and other causes have sharply increased the cost of living. In the closing weeks of the year, Germany's proposition for peace negotiations has led some to think that favorable conditions here may soon be affected by a settlement of the great controversy in Europe.

### THE STEEL INDUSTRY

Steel mills have been subjected to great pressure by both foreign and domestic demand, for in recent months our railroads have been buying freely

### STEEL CORPORATION'S NET EARNINGS

Proof of unprecedented prosperity in the steel industry is shown by the Steel Corporation's net earnings, which have risen from \$12,500,000 in the first quarter of 1915 to \$85,800,000 in the third quarter of this year. For the full year probably they will be not less than \$310,000,000. These profits have caused three increases of wages and the declaration of extra dividends.

Quarters	1916	1915	1914
First .....	\$60,712,624	\$12,458,159	\$17,994,351
Second .....	81,126,048	27,950,055	20,457,596
Third .....	85,817,067	38,718,644	22,276,002
Fourth .....	.....	51,232,788	10,933,170
.....	\$130,359,646		\$71,661,149

### FOREIGN TRADE

Exports have steadily increased, owing to great shipments of war supplies, and imports in recent months have declined. The excess in favor of the United States for the full calendar year will be more than \$3,000,000,000. In the fiscal year that ended with June it was \$2,135,000,000. Exports for the calendar year will be about \$5,400,000,000.

	Exports	Imports	Excess of Exports
January .....	\$330,636,410	\$184,350,942	\$145,683,468
February .....	401,783,974	193,933,117	207,848,857

the equipment they needed some time ago. Their orders in November amounted to \$130,000,000, but delivery will be greatly delayed. Many of the cars, locomotives and rails will not go to the buyers until 1918. Russia has placed contracts for 350,000 tons of rails, 165,000 tons of barbed wire, 1000 locomotives, 1000 cars and 50,000 car wheels. Italy has bought rails and pig iron; Japan has taken large quantities of ship plates. In the late months of the year the Allies made heavy purchases of steel bars to be used in the manufacture of shells, taking about 2,000,000 tons at \$80 a ton. There have been additions to prices every week, and the increase for many products in a year has been not far from 100 per cent. This advance adds to the cost of railroad operation and of the machinery and tools which farmers must

have. The price of tin plate has risen from \$3.60 to \$6.50 and \$7 per box. There are great exports of this product. The upward movement of prices is seen at the base of the industry. There has recently been much excitement, with sharp advances, in the pig iron market. Bessemer billets are sold at \$35, against \$19.50 a year and a half ago. Exports of iron and steel products in the nine months that ended with September were \$619,853,000, but were only \$215,000,000 in the corresponding months of last year.

Profits are fairly indicated by the reports of the great Steel Corporation, whose net earnings—only \$12,458,000 in the first quarter of 1915—have risen to \$60,000,000 in this year's first quarter, \$81,000,000 in the second, and \$85,800,000 in the third. For the full year they will be about \$310,000,000, which may be compared with \$130,000,000 last year and \$71,000,000 in 1914. For two quarters the dividends, owing to extra additions, have been at the rate of 9 per cent. The

### COURSE OF RAILROAD STOCKS

The large price gains of 1915 have been followed by losses, as a rule, and these were increased in the year's last quarter. Earnings have been very satisfactory, but prices have been restrained by the wages controversy and the expected cost of the eight-hour law; also by the sale, during a considerable part of the year, of shares that had been owned abroad.

## OUTPUT OF PIG IRON, TONS

Demand at home and abroad for steel products has caused a notable increase of the output of pig iron, which for the full year will be a little less than 40,000,000 tons, a quantity exceeding last year's output by about 33 per cent.

1908	15,936,018
1909	25,795,471

1912	29,727,137
1913	30,724,581
1914	23,049,792
1915	29,682,566

1916

January	3,185,121
February	3,087,212
March	3,337,691
April	3,227,768
May	3,351,708
June	3,211,588
July	3,224,513
August	3,203,713
September	3,202,366
October	3,508,849
November	3,311,811

number of employees has been increased from 141,000 to 260,000, and this year's three additions to the wages amount to more than \$50,000,000 in annual payments. Wages have been increased by the other steel companies. Improvements and extensions made or planned in this industry during the year involve the expenditure of more than \$100,000,000.

### EXPORTS

When our exports in a month for the first time exceeded \$400,000,000, in February, a higher record was not generally expected, but shipments have been much larger in the second half of the year, and the total will be about \$5,400,000,000. Last year's was \$3,547,000,000. While the character of orders for munitions was changed, owing to the new factories in Europe, the movement was not checked. Old orders had not been filled, and there were new ones for great quantities of munition raw material. Demand for other war supplies did not decline. The year's excess of exports over imports, or the balance of trade in favor of this country, will exceed \$3,000,000,000. For the four months that ended with October it was at the annual rate of \$3,700,000,000. In 1915, the calendar year, the excess was only \$1,768,000,000.

### FOREIGN LOANS

Many additional loans to foreign governments, provinces or cities were made during the year, and the total of these borrowings is now about \$2,000,000,000. The year's list includes \$100,000,000 to France; \$50,000,000 to the city of Paris; \$20,000,000 to each of the three French cities of Bordeaux, Lyons and Marseilles; \$2,400,000 to Bolivia; \$5,500,000 to the city of Sao Paulo, in Brazil; \$15,000,000 to Argentina; \$5,000,000 to Norway, and \$50,000,000 to Russia, a country which is buying so much war material here that our exports to it have been multiplied by six. For the loan to France a new American company was formed, and it issued its own notes on the security of bonds supplied by France as collateral.

---	---	--	---

Of the securities deposited for support of a British loan of \$250,000,000, one-third, or \$100,000,000, were American issues, and this use of them appeared to check for a time what had been a continuous sale of American stocks by the British Government on the New York Stock Exchange. The money loaned to the city of Paris was to be used, not for arms or munitions, but to alleviate suffering by relief work in hospitals and elsewhere.

China obtained \$5,000,000 from a bank in Chicago, thus exciting protests from Europe and Japan. There were also small loans to Ontario, the Water Board of Valparaiso, and a French railroad company, with a credit of \$25,000,000 to a group of French firms. In the latter part of November preparation was made for the sale here, to banks and other purchasers, of British Exchequer bills or Treasury notes. Whereupon the Federal Reserve Board at Washington publicly issued a warning to the banks of the Reserve system, saying that they should not tie up their liquid funds in such securities, the term of which could be prolonged by renewals. This caused surprise of a disagreeable kind in London, and orders were given that the notes should not be offered here, the British Government saying it desired to show its respect for the Reserve Board.

#### STOCKS

The market for securities was a broad and active one, especially in the second half of the year, but there were net losses for nearly all the railroad shares and many of the industrial stocks. Trading was stimulated by prosperity, great exports, and large profits in manufactures. There were many signs that what brokers call "the public" was taking part. Price movements were irregular. At times depression was caused by rumors of impending peace or fear of new international complications on account of submarine warfare. On one day in October the report, given out by a leading banker, that peace proposals from Germany were on the way to Washington caused a decline, and there was another three days later, owing to the sinking of ships off Nantucket Light by a German submarine. There were scores of million-share days on the New York Stock Exchange. All the full days in November were of that kind, and the month, with a total of 34,506,980, made a new high record. In election week there were no large general gains or losses. Some were saying that prevention of a change of control at Washington should exert a favorable influence upon the market. Many extra or special dividends supported the shares of industrial and copper mining companies. There were large transactions every day in Steel Corporation stock, with rising prices until the last few weeks, owing to great net earnings. Sale of shares by the British Government appeared to have been discontinued in the last quarter. The interest rate on demand loans was low, except for a short time near the end of the year, when it rose to 15 per

## GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an Annuity or an Old Age Income Policy as issued by the Home Life Insurance Company of New York. The Annuity will yield a much larger income than can be obtained from any other absolutely secured investment. The Old Age Income commences at age 60, but in case of prior death the monthly income immediately accrues to the beneficiary. For a sample policy write to

## A Surety Bond of Known Strength

As the only purpose of a Surety Bond is to guarantee its holder against financial loss caused by failure or inability to complete an obligation, it is obvious that the most desirable Bond is the one which is backed by unquestioned ability and recognized willingness to pay in case of default. It is universally recognized that this applies in greatest degree to the Bond of

cent. A sharp decline was caused in December by the German Government's proposals for peace negotiations. Stocks of all kinds suffered much loss in two days, the transactions in each of them amounting to nearly 2,500,000 shares. Steel Corporation common stock, which had risen to 129 3/4 some time earlier, fell to 113.

### THE RAILROADS

Heavy traffic and large earnings did not prevent a decline in the market value of railroad shares. In the early months of the year there was great congestion of freight in the vicinity of New York, the port from which more than half of the exports are shipped, and in the closing months transportation was affected by a shortage of cars. Investors were restrained by the thought that the gains, due to war business, were temporary, and, during a considerable part of the year, by the menace of a general strike if wage demands involving an increase of expenses by from \$50,000,000 to \$100,000,000 should be rejected. After the strike had been averted by the President and Congress, there was promise of additional cost of operation in the new Adamson eight-hour law, which was to take effect on January 1. Beginning in the West, the leading companies asked for injunctions against the law, asserting that it was unconstitutional. There was a threat of a strike if the courts should decide in their favor. Efforts were made to reach a final decision before the end of the year. While reports showed increases of net earnings, they also gave proof of the higher cost of operation, due to a great advance in the prices of equipment and all supplies. Near the close of the year the companies gave large orders for new rolling stock, those in November amounting to about \$130,000,000, and the Newlands Congressional committee began its inquiry as to the expediency of government ownership.

*The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.*

### DIVIDENDS

#### THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY (of Delaware)

NOTICE OF DIVIDEND ON PREFERRED AND COMMON STOCK AND OF EXTRA DIVIDEND ON PREFERRED STOCK.

The Board of Directors of The American Brake Shoe and Foundry Company, a Delaware corporation, has declared a dividend of eight per cent. (8%) upon its Preferred Stock, payable in four quarterly instalments of two per cent. (2%) each, and a dividend of seven per cent. (7%) upon its Common Stock, payable in four quarterly instalments of one and three-quarters per cent. (1 3/4%) each, the first of said instalments, in the case of each class of stock, to be payable on December 30, 1916, to stockholders of record at 3 o'clock P. M. on December 22, 1916; the second on March 31, 1917, to stockholders of record at 3 o'clock P. M. on March 23, 1917; the third on June 30, 1917, to stockholders of record at 3 o'clock P. M. on June 22, 1917; and the fourth on September 29, 1917, to stockholders of record at 3 o'clock P. M. on September 21, 1917.

The Board of Directors of said Company has also declared an extra dividend of two per cent. (2%) upon its Preferred Stock, payable on December 30, 1916, to stockholders of record at 3 o'clock P. M. on December 22, 1916.

Checks will be mailed.  
HENRY C. KNOX, Treasurer.  
Dated, New York, December 12, 1916.

#### PACIFIC GAS AND ELECTRIC CO. COMMON STOCK DIVIDEND NO. 9.

A meeting of the Board of Directors has been called for 3:30 o'clock P. M. December 29, 1916, for the purpose of declaring a quarterly dividend (No. 9) at the rate of \$1.25 per share upon the Common Capital Stock of this Company, payable on January 15, 1917, to stockholders of record at 12:00 o'clock noon December 30, 1916. Checks for the dividend will be mailed. The Transfer Books will not close and owners desiring checks payable to themselves should have stock certificates issued in their own names on or before the last mentioned date.

D. H. FOOTE, Secretary of the  
PACIFIC GAS AND ELECTRIC COMPANY.  
San Francisco, California, Dec. 9, 1916.

#### THE NEW YORK CENTRAL RAILROAD CO.

New York, December 13, 1916.

A Dividend of One Dollar and Twenty-five cents (\$1.25) per share on the Capital Stock of this Company has been declared payable February 1, 1917, at the office of the Treasurer, to stockholders of record at the close of business January 2, 1917.

For the purpose of the Annual Meeting of stockholders of this Company, which will be held January 24, 1917, the stock transfer books will be closed at 3 P. M., January 2, 1917, and reopened at 10 A. M., January 25, 1917.

EDWARD L. ROSSITER, Treasurer.

#### UNITED SHOE MACHINERY CORPORATION

The Directors of this Corporation have declared a quarterly dividend of 1 1/2% (37 1/2c per share) on the Preferred capital stock, and a dividend of 2% (50c per share) on the Common capital stock, both payable January 5, 1917, to stockholders of record at the close of business December 19, 1916.

L. A. COOLIDGE, Treasurer.

#### UNITED FRUIT COMPANY DIVIDEND NO. 70

A quarterly dividend of two per cent (two dollars per share) on the capital stock of this Company has been declared, payable on January 15, 1917, to stockholders of record at the close of business, December 23, 1916.

The transfer books do not close in connection with this dividend declaration.

JOHN W. DAMON, Treasurer.

#### D. C. Heath & Co., Boston Preferred Stock

The regular quarterly dividend of one and three-quarters per cent. has been declared by the Directors of this corporation, payable January 1, 1917, to preferred stockholders of record December 23, 1916. Checks will be mailed.

WINFIELD S. SMYTH, Treasurer.

#### THE ELECTRIC STORAGE BATTERY COMPANY.

Allegheny Avenue and 19th Street.

Phila., December 6th, 1916

The Directors have declared a dividend of one per cent. (1%) from the net earnings of the Company on both Common and Preferred Stocks, payable January 2d, 1917, to stockholders of record at the close of business on December 18th, 1916. Checks will be mailed.

WALTER G. HENDERSON, Treasurer.

#### The American Agricultural Chemical Company.

New York, Dec. 14, 1916.

A quarterly dividend of one and one-half per cent. on the Preferred Stock of this Company (No. 10), and a quarterly dividend of one and one-quarter per cent. on the Common Stock (No. 21) have been declared payable January 15, 1917, to stockholders of record at the close of business on Wednesday, December 20, 1916.

THOMAS A. BOE, Treasurer.

## CROPS AND FOOD

When it became known that the wheat crop was only 607,557,000 bushels, and that Canada had only 159,000,000, against last year's 376,000,000, prices advanced. The summit for wheat at Chicago was reached in November, when sales were made at \$1.92, with corn at 99 3/4. Early in the year wheat had been as low as \$1.02. A decline, due mainly to signs of a popular demand for an embargo, carried the price down to \$1.54 in the middle of December. All the crops were short in comparison with those of 1915, hay, tobacco and rice excepted. The yield of potatoes, 288,000,000 bushels, was 72,000,000 below the recent average. It was officially estimated that only 100,000,000 bushels of wheat could be spared for export, but at the beginning of December 75,000,000 had been shipped. Europe took 250,000,000 in 1915. Successive cotton crop estimates fell from 14,266,000 to 11,511,000 bales, and the price rose to 20 cents a pound at New York, then receding to 18 1/2. The high and rising cost of all food supplies caused many to ask for an embargo law forbidding exports. Bills for an embargo have been introduced in Congress. An investigation thruout the country is to be made by the Department of Justice, to ascertain whether prices have been raised and maintained unlawfully. There has been a long list of wage increases, granted on account of the cost of living. In December a general movement of this kind was seen, involving an addition of 10 per cent. At the same time bonuses, or increases of a temporary character, were given by many banks and business firms.

## PEBBLES

"How was iron ore first discovered?"  
"I believe they smelt it."—*Shopman.*

It seems to be an undoubted fact that British manufacturers are being worsted in the stocking trade.—*Passing Show.*

Harry Lauder has been buying an estate in Scotland. But even he didn't succeed in getting one for a mere song.—*Passing Show.*

"I hear Jones died from a single blow."  
"Who hit him?"

"No one. He blew out the gas."—*Philadelphia Ledger.*

Psyche: What do you think of my new ball gown?

Phil: The cloth is nice but it looks terrible.—*Argoan.*

In the Meuse district, we learn, the Germans have been making attacks on Pepper Hill. Of course, such a position can only be taken by assault.—*Passing Show.*

"Ah, ha!" the horse remarked in glee.

"The farmer's built a home for me."

The cow was feeling pretty small.

Until she learned 'twas just a stall.

—*New York World.*

Mrs. McCarthy: Don't you stay in the room when your daughter has company, any more?

Mrs. Murphy: No. I'm trying the honor system.—*Gargoyle.*

Officer (excitedly): Hi! Tomkins, have you seen anything of my baggage?

Private Tomkins: Yes, sir, she's just gone along there with the Major's splinters.

# INSURANCE

CONDUCTED BY W. E. UNDERWOOD

## FIRE INSURANCE AND THE PUBLIC

WHILE it is certain that everybody who reads this article knows that an insurance policy is a contract, we also know that very few persons appreciate the responsibilities, express and implied, which they assume under it. They rarely read it, and it is generally regarded more as a promise of the insurer to pay on the happening of the event insured against, than as a mutual agreement entered into between themselves and the insurer. Right at this point is where most of the trouble between the insurance companies and the insuring public originates. It is a small matter, perhaps, but when we face the larger consequences of which it is the parent, we are able to realize how serious it is.

We meet the objection that the insurance policy—admittedly a contract between two parties when considered from a strict legal viewpoint—is a one-sided instrument, in that its terms have not been debated and agreed to in advance by those entering into it. This is true. The service to be rendered is of a general character; that is to say, the principal thing wanted is to pay an indemnity on the occurrence of a loss. The insurer is ready to do that under certain conditions, and these govern in all cases. It is, therefore, practicable to set out a uniform contract for the use of all, varying or modifying the provisions to fit individual circumstances by written endorsements. On the other hand, it is obvious that it would be entirely impracticable to negotiate all the terms and provisions with each insured every time a policy was wanted. The result is, every insurance policy is what the courts characterize as a unilateral contract, that is, one-sided.

As a matter of plain fact, however, the fire insurance policy in particular is not as one-sided—that is, wholly drawn by only one of the parties—as this description might imply, for the following reason: Fifty years ago the National Board of Fire Underwriters endeavored to secure the adoption of a standard form of policy by its members. The question was taken up by the insuring public and eventually got into the legislatures of several Eastern states, notably Connecticut, Massachusetts and New York. Fire underwriters coöperated in this work and the principle became firmly established. All fire insurance policies now in use are “standard” forms prescribed by some state. Some states have adopted the New York form, some that of Connecticut or Massachusetts, others require their own. So, as it falls out, the fire insurance policies now in use are actually state laws, and have lost much of their former character of one-sidedness.

It should be apparent from this explanation that it is the duty of every holder of a fire insurance policy to read and clearly understand all the terms of the agreement he has made with his insurer. It is objected that the phraseology is antiquated and involved, crowded with repetitions and, like all legal documents, difficult of comprehension. There is enough truth in this objection to give it standing, but it is not sufficient to prevent one interested from discharging a duty due himself. The policies of today, while necessarily long, are composed in current English, comparatively free of involutions and easily comprehended by an average intelligence.

A STUDY of the fire insurance policy will result in a knowledge of the scientific limitations of the—let us say art—of the art of fire underwriting. This, in turn, will clear up many misunderstandings which injure the public interests; for I insist that the institution of insurance cannot be benefited or injured without benefiting or injuring those who, because they furnish all the money with which it works, are at bottom the institution itself. It is important to understand that fire insurance has not been reduced to a science—to quote a definition of Sir William Hamilton, the Scotch philosopher—“a complement of cognitions, having, in point of form, the character of logical perfection, and in point of matter, the character of real truth.” Nor, contemplating the countless number and constantly changing conditions in which it must operate, does it seem reasonable to hope that it will ever attain to the perfection of a science. A long continued violent east wind, with freezing weather and snow, driving a conflagration from the lower end of Manhattan Island, would utterly ruin all the science which fire insurance possesses. It has not and it cannot maintain itself against a combination of circumstances

*This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.*

as probable as that. There are innumerable other conditions and influences operating to modify, intensify or destroy one or more of the factors composing the general principles.

It is this failure to successfully generalize which makes fire insurance, as a commercial enterprise, the hazardous business it is. It explains the financial ruin of hundreds of properly organized and conducted legitimate fire insurance companies. It accounts for the absence of such great mutual companies in the fire branch as we have in the life branch. It furnishes the reason of the existence of large and successful joint-stock companies, with millions of capital; and it explains why it is that the larger they are the more successful they are. Only millions of accumulated money can withstand the unexpected shocks which the fire insurance business must encounter. Companies thus equipt can live on the income earned on their investments, content in good years to take a small margin of profit or, in bad, to stand a small loss on their underwriting, and occasionally—as at San Francisco in 1906—stand up under terrific punishment. The investors in fire insurance stocks are adventurers in the sense that most of them are more likely to lose their money than keep it and, personally, I can imagine a no more hopeless investment than the purchase of stock in a new fire insurance company of ordinary financial proportions, say of less than two millions.

A life insurance company, and by that is meant one of orthodox principles, using a standard mathematical reserve in calculating rates, is always on solid ground. It is supported by the three sciences—mathematics, medicine and law—and may fairly be regarded as doing a scientific business. It never ventures, and its benefits are always exchanged for a compensation that is adequate. None of these things is true of fire insurance. There are, perhaps, a few gentlemen in the fire insurance business who believe they have worked out a formula thru the use of which scientific rates may be computed. But the practicability of the schemes from the viewpoint of science has in no case been obvious. A number of them have been used and these, from time to time, have been superseded by others which were regarded as improvements. None of them, however, have succeeded in securing such information as the starting point for rate-making as the life insurance companies possess in the Mortality Table. And, of course, they never will, for the plain reason that every human life ceases some time and a building or other inflammable property may never burn.

But if it is impossible to reduce fire

insurance rate-making to a science, we are not to conclude that the business is a gamble. Nothing would be more erroneous. As conducted by its best practitioners, we may fairly concede the use of methods and the observation of known laws which under normal conditions place its operations and results within reasonable and known boundaries. One of the essentials of fire underwriting is good judgment. I am inclined to believe that there are few lines of business in which this quality is more exercised, and I am acquainted with no set of men who, from the constant employment of it in their trade, are so much addicted to careful deliberation over all questions. In most affairs they should make safe counselors.

In this running discussion of a voluminous subject to be confined in a small space, it is possible to touch only briefly a few outstanding features, my main object being to soften any asperities which may reside in the mind of the man who buys fire insurance by causing him to think a little more closely on the subject than is usually the custom. He should first know the duty he as an insured has undertaken and, therefore, he is asked to read and understand the contract subsisting between him and his insurer. Then to have him understand that the companies are doing everything in their power to make their service to the public as efficient and effective as the nature of the business will permit. Their rates are as scientific as experience can make them; the restrictions they impose are as few and as light as safety will warrant; their contract provisions and privileges as liberal as justice to all other insured persons will authorize. In expressing these sentiments, I am doing so in the full knowledge that fire insurance as a whole is neither oppressive nor monopolistic. It cannot be either, if it desired. Both could be broken in three months. Fire insurance is just as essential to everything which constitutes our civilization as is salt in food. We could at a pinch dispense with both, but we would be uncomfortable. Fire underwriters appreciate the value of the service they sell. They know they will always be in demand. They also know that the character of the service, its status as a public necessity, renders the expectation of rich rewards impossible.

If the public will work with the insurance companies instead of against them, as is generally the fashion; if they will ask for information when they don't understand; if they will mitigate the severity of their tax and sundry other oppressive laws; if they will replace those laws with others regulating the construction of buildings, the paving of streets, the accumulating of effective fire-prevention and fire-fighting machinery; if they will punish arson and fairly enforce every law the ultimate effect of which will reduce our shameful fire waste, they will find themselves grown cordially friendly to it, and their pockets sensibly heavier from the savings made in the cost of their protection.

# From Clermont to California

The first steamboat, the *Clermont*, built by Robert Fulton, was running on the Hudson when the Hartford Fire Insurance Company of Hartford, Conn., began writing fire insurance in 1810. Throughout the entire history of steam navigation, from Fulton's crude experiment to the great super-dreadnaught *California* with its turbine-electric drive, there has been an equally remarkable insurance development toward the present comprehensive

## INSURANCE *Service* OF THE TWO HARTFORDS

The Hartford Fire Insurance Company and the Hartford Accident and Indemnity Company write practically every form of insurance except life insurance. For over a century Hartford losses have been fairly and promptly paid. The Hartford has helped rebuild New York, Boston, Charleston, Chicago, San Francisco and all American cities that have been visited by conflagrations. Are you fully insured? Look over the list below and check the forms of insurance which interest you. Ask your agent or broker to get you a Hartford policy, or write to us and we will tell you the name and address of an agent who can give you rates and particulars.

## The New Books

### THE QUACK PROPHECY

As an acute and penetrating study of quack religion in American life and of human credulity in general, William Dean Howells' novel *The Leatherstocking God* is a masterpiece. Those who have watched with sorrowful wonder the growth and progress of one sentimental pseudo religion or cult after another in this country of ours, the miraculous success of the taking leadership that promises to work the miracles of Jehovah and never does—those men and women, I think, will find most in this book.

It is the story of simple, kindly, believing humanity deluded by an impostor with uncanny histrionic ability, an impostor who claims to be first a prophet, then the Christ, and finally the Very God of Very God, the Holy Trinity of the churches. The character drawing is finely sensitive to the real dramatic facts of human experience. Mr. Howells is a master novelist. His characters are not like the waxen dummies of department store windows borne up under a gaudy drapery of plot and theory. On the contrary, they have breath and speech, hearts and souls, life.

*The Leatherstocking God*, by W. D. Howells. The Century Company. \$1.35.

### PSYCHOLOGY OF CRIMINALS

The second Monograph in the Criminal Science series, *Studies in Forensic Psychiatry*, by Dr. Bernard Glueck, presents a number of clinical cases selected with reference to the mental pathology of men and women treated as criminals, rather than to the motivation of crime in the first instance. One is impressed, in reading these studies, with the hopelessness of the traditional methods of dealing with many classes of crime. As Dr. Glueck says, of criminals that have defective organizations, "each additional imprisonment only serves to deprave the habitual criminal more deeply, and to release him after the expiration of an arbitrary sentence is to let loose another parasite to prey upon society." The most helpful attitude to criminals of this type would seem to be that of treating them as differing from normal individuals as those who are specially susceptible to infectious disease differ from those who are immune. The entrance upon a criminal career depends upon exposure to special stress or temptation; the usual treatment according to statute results in the establishment of a vicious circle.

Other cases described illustrate the disintegrating effects of fear or of other violent affective experiences, resulting in specialized types of insanity classified

as "prison psychosis." The mere fact of imprisonment or indictment, or the pending of criminal charges, acts unfavorably upon the mentality, and counteracts very largely all attempts at curative treatment. There are studies of malingering, and an unusually illuminating account of a victim of pathologic stealing. The analysis of the clinical cases in terms of the new psychology and in relation to the social significance of the conduct and character of the patients makes these studies of special value to all who have to do with mental or moral delinquents.

*Studies in Forensic Psychology*, by Howard Glueck. Boston, Little, Brown & Co. \$2.50.

#### WITH THE BELGIANS

At the moment when the situation of the unfortunate Belgians is again to the forefront, Edward Eyre Hunt publishes *War Bread*, a lucid account of his charge as American Delegate of the Commission for the Relief of Belgium, Province of Antwerp. His mission compelled much traveling by rail, auto, and sometimes on foot. At the outset he went to "Berlin the Terrible," where he was admonished that "you must think in centuries to understand Germany." An interview with Dr. Liebknecht leaves the impression that German Socialists thought more of their considerable property interests than of principles in submitting to the military power when war was declared. Follows the bombardment of Antwerp and the author's flight into Holland with Belgian refugees. He is presently back again in Belgium to take up the work of relief, his pages thereafter being mainly a convincing testimony of the energetic efficiency with which the American staff toiled in the distribution of desperately needful supplies, and the strongest possible plea for continued support of these humane efforts.

*War Bread*, by E. E. Hunt. Henry Holt & Co. \$2.

#### STORY BOOKS

Of course *The Vermilion Box* is a "pillar post box" and the letters those of an English family circle. They deal with the lighter side of the war and are pleasant, reflective, humorous, after the genial fashion of E. V. Lucas in "Over Bemerton's." (G. H. Doran Company, \$1.40.)

If you know anyone who likes dogs give him *Gulliver, the Great*. It is no small matter to write a dog story for people who know what Dr. Brown and Olivant and Davis and Atkinson have done, but if one be skeptical begin, as the skeptical reviewer did, with *The Two Dogs o' Glenfergus*. (The Century Company, \$1.35.)

If any one else had taken the material of *The Emperor of Portugallia* he would have made a novel of it, but Selma Lagerlöf has made something which is not exactly a novel, not exactly an allegory, not exactly a fairy story, not exactly a parable, but a curious and beautiful combination of them all. (Doubleday, Page & Co., \$1.50.)

From the author's preface to *Red Cross and Iron Cross*, by a doctor in France, one remains uncertain whether this collection of sketches is of witnessed incidents or in part at least gathered from hearsay. One hopes that the supreme horror with which the author enshrouds his narratives is somewhat due to his imagination. (E. P. Dutton & Co., \$1.)

The powerful and wicked Rubber Corporation, with its exploiting of Lo-the-Poor-Indian, is somewhat too easily de-

Chas. S. Noe, Chairman Board of Directors

feated in a commercial and tropical battle by the captain of the tramp schooner which plays the only feminine rôle in *The Romance of the Martin Connor*, by Oswald Kendall. (Houghton, Mifflin Company, \$1.25.)

*Xingu and Other Stories*, by Edith Wharton, is a collection of admirable tales. Xingu is a deliciously amusing narrative that has to do with "ladies who pursue Culture in bands as tho it were dangerous to meet alone"; *Coming Home*, a poignant and keenly interesting chronicle taken from the tragic annals of the great war; *Banner Sisters*, an intensely pathetic account of one sister's devotion to another. (Charles Scribner's Sons, \$1.40.)

*The Winged Victory*, by Sarah Grand, is dramatic, impressive, absorbingly interesting, and very skilfully reserves the revelation of its great secret until close to the end of its nearly four hundred pages. The group of titled Englishmen who wander thru the book as a sort of chorus to the play are cleverly portrayed, and their conversation affords keen enjoyment to readers who "dearly love a lord," as most Americans and practically all Englishmen do. (Daniel Appleton & Co., \$1.50.)

### SECTS AND MISSIONARIES

The layman will find a clear and concise explanation of the teachings of Emanuel Swedenborg in John Howard Spalding's book, *The Kingdom of Heaven as Seen by Swedenborg*. (E. P. Dutton & Co., \$1.50.)

A satirical vein runs thru Prof. John Quincy Adams' little volume on *The Birth of Mormonism* which detracts from the otherwise useful sketch of the rise of this eccentric religious body. Plain truth is a better weapon to use against error. (Boston: Richard G. Badger, \$1.)

Under the suggestive title *In the Wake of the War Canoe*, Archdeacon Collison, worker among the tribes of British Columbia, gives many a lively incident and touching experience as well as vivid descriptions of a wild and rugged country, its tribal customs and other characteristics. (E. P. Dutton & Co., \$1.75.)

Dr. J. B. Cranfill's *Chronicles* have special interest doubtless for fellow workers in the Baptist church and in the prohibition cause, but his varied life has filled his autobiography with lively tales of the Texas in the 60s and 70s, when revolvers were kept handy and used frequently. (F. H. Revell & Co., \$2.)

*The Churches of the Federal Council*, a compilation edited by Dr. Charles S. Macfarland, the General Secretary of the Council, contains short accounts of the history, organization and characteristics of the thirty different denominations represented in the Federation. Each communion is described by one of its own leaders. (F. H. Revell & Co., \$1.)

*Leavening the Levant*, by Dr. Joseph K. Green, gives insight into the methods and value of missionary work. The author's residence in Turkey for more than fifty years gives him personal knowledge on the critical questions of recent history including the Armenian persecutions, the revolution, and the work of the Young Turks. (Boston: The Pilgrim Press, \$1.50.)

The new edition of Dr. McConnell's *History of the American Episcopal Church* contains chapters covering the period since the Civil War. There is confusion in the title, there being no such institution or denomination as the "American Episcopal Church." Sometimes American Christianity is reviewed, sometimes the Protestant Episcopal Church. The book is rather the work of a devotee than of an objective historian. (Milwaukee: Young Churchman Company, \$1.50.)

Prof. Abraham Yohannan's volume on *The Death of a Nation* gives an historic sketch of the Nestorian or Assyrian Christians in Eastern Turkestan and Persia. Their sufferings and persecutions have almost, perhaps quite, equaled those thru which the Armenians have passed. The recent massacres by Turks and Kurds are

recounted in a veritable chapter of horrors. If more evidence is needed to condemn the Turkish Government of unforgivable political sin, it may here be found in plenty. (G. P. Putnam's Sons, \$2.)

In *Winning the World for Christ*, the Cole Lectures by Bishop Walter R. Lambuth, of the Methodist Episcopal Church, South, is given an eloquent exposition of missionary dynamics by a study of the sources of inspiration and power in the long history of missionary effort. A wise plea for larger vision in estimating the task of the church. (F. H. Revell & Co., \$1.25.)

The International Committee of the Y. M. C. A. issues two small books for private and class study, *The Christian According to Paul*, thirteen studies by J. T. Faris on the Apostle's development and spiritual outlook; and *The Social Principles of Jesus*, by Walter Rauschenbusch. This deals with the most important themes of Jesus' teaching. It is written with the keen historical insight and social passion that distinguish this author. (Y. M. C. A. Press, 50 cents each.)

*Hinduism in Europe and America*, by Elizabeth A. Reed, is a popular and passionate but accurate exposition of the substance and evil tendencies of these exotic Oriental cults which have sought and obtained some following in the Western World. That hundreds of fairly intelligent people (mostly women) can be lured into allegiance to "the holy men" and repellent rites of a morally degrading religion presented in the glamour of deep mystery is proof enough of the need of this plain statement of facts. (G. P. Putnam's Sons, \$1.25.)

TEACHERS AND LEARNERS

Antoinette Knowles, in *Oral English or the Art of Speaking*, has produced an admirable textbook. Among the topics suggestively treated are how to plan a speech, the art of phrasing, how to use a library. (D. C. Heath & Co., \$1.20.)

Advanced students will find many helpful suggestions in *How to Learn Easily*, by George Dearborn. The author considers the subject from a psychological viewpoint. The work is non-technical, and simply written. (Boston: Little, Brown & Co., \$1.)

*Every-Day Words and Their Uses*, by Robert P. Utter, is a collection of more than a thousand words commonly misused. The correct meaning of each word is explained at length, the whole introduced by a chapter on good usage. (Harper & Brothers, \$1.25.)

A straight from the shoulder argument on training girls to be "human beings" is *The Worth of a Girl*, by Bertha Pratt King, who is not afraid to state precisely the meaning and the effect of passivity, dependence, romantic reading, fashions and parlor tricks. (T. Y. Crowell Company, 25 cents.)

Constructive thinking on present needs instead of merely remembering the results of another's thinking is the reason for Prof. John W. Hall's *Question as a Factor in Teaching*. Its main lead is in story teaching. Mothers, teachers and Sunday school workers will find it useful. (Houghton, Mifflin Company, \$1.25.)

In his *Beginner's Psychology*, Professor Titchener, of Cornell, has attempted to write the sort of book that he thinks he would have found useful when he began the study of the subject himself - and this book will be useful to any beginner. The author has the knack of keeping his generalizations and abstractions in direct contact with concrete experience. (The Macmillan Company, \$1.)

Of the many books on education that America has produced easily the most influential has been Dewey's *The School and Society* which appeared in 1900. A second edition includes the original material and five additional chapters embodying representative experiences worked out in the experimental source of the Gury system - the University of Chicago Elementary School. (University of Chicago Press, \$1.)

ATLANTIC MUTUAL INSURANCE COMPANY

New York, January 26, 1916.

The Trustees, in conformity with the Charter of the Company, submit the following statement of its affairs on the 31st of December, 1915.

The Company's business has been confined to marine and inland transportation insurance. Premiums on such risks from the 1st January, 1915, to the 31st December, 1915...\$6,153,866.43 Premiums on Policies not marked off 1st January, 1915...993,965.13 Total Premiums...\$7,147,831.56 Premiums marked off from January 1, 1915, to December 31, 1915...\$6,244,127.90

Interest on the investments of the Company received during the year...\$328,970.78 Interest on Deposits in Banks and Trust Companies, etc...75,237.08 Rent received less Taxes and Expenses...97,836.23 \$502,044.09 Losses paid during the year...\$2,233,703.62 Less Salvages...\$205,247.59 Re-insurances...448,602.85 \$653,850.44 \$1,579,853.18 Re-insurance Premiums and Returns of Premiums...1,076,516.36 Expenses, including compensation of officers and clerks, taxes, stationery, advertisements, etc...717,114.89

A dividend of interest of Six per cent. on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday the first of February next.

The outstanding certificates of the issue of 1910 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday the first of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment, and canceled.

A dividend of Forty per cent. is declared on the earned premiums of the Company for the year ending 31st December, 1915, which are entitled to participate in dividend, for which, upon application, certificates will be issued on and after Tuesday the second of May next.

## Independent Opinions

Somehow our editorial "The Taste of a Name," on the avocado, *alias* "alligator pear," proved distasteful to some of our readers. One kindly critic writes from Albany:

This is of no interest to any thinking man. There is neither wit, thought nor information in it. It's drivel—rot. Don't load your paper with such stuff.

We won't say a word in defense of the "wit" or the "thought," but we insist that it contained an abundance of "information." The paragraph was simply packed with the fruits of etymological and pomological research. If necessary we can show where we got it.

Another reader makes the contrary criticism, that we did not devote enough space to the subject:

Your short editorial of November 13 on the alligator pear was exasperating because of what it didn't contain! In these days when some of us assuage the pangs of hunger by reading the cook-book, or the account of how Sancho Panza skimmed pullets out of the huge kettles at the wedding of Comancho, the rich—in these days. I say, the bare knowledge of the name of an "eat" is a barmecide's feast indeed. Please—and hungrily—what *are* alligator pears? Also, "mameys from Cuba"? In the market reports, the former become more mongrel by being listed among the vegetables, at the brazen price of three dollars a dozen. The "Standard Dictionary" gives a little information, but not enough for one who hankers to know whether they must be frittered, fricasseed, mint-juleped, assassinated, eaten alive on the hoof, or what. St. Johnsbury's pretzels and um-what?'s are well known to us bucolics, but in the name of all that's good to eat, what *are* Cuban mameys and alligator pears—and how do you fix 'em?

EMMA STOCKINGER

Versailles, Indiana

As for the avocado—which those who do not know any better call "alligator pear" and those who know too much call "Persea gratissima"—it's a West Indian fruit now being cultivated in California and Florida. There are many ways of fixing 'em, but the only right way is, of course, our way. Split the fruit in half lengthwise and you will find a cavity in the shape of a prolate hemispheroid in the midst of it, just right to hold the dressing. Stir together oil, vinegar, salt and pepper (no mustard) and pour it into the cavity. Then with a spoon ('cause a fork leaks) scoop out the pulp, gradually working around in a spiral toward the periphery until you get to the rind or have used up all the dressing.

As for the "mameys from Cuba,"—just wait a minute please till we can collect our thoughts from the bookcase.

Mammee apple, South American or St. Domingo Apricot, the fruit of *Mammea americana* (natural order Clusiaceae), a large tree with opposite leathery gland-dotted leaves . . . [skip that] . . .

WELLESLEY HILLS, MASS.      MONTANA

and yellow fruit three to six inches in diameter. The bitter rind encloses a sweet aromatic flesh, which is eaten raw or steeped in wine [not in prohibition states] or with sugar, and is also used for preserves. There are one to four large, rough seeds which are bitter and resinous and used as anthelmintics. An aromatic liqueur distilled from the . . . [but we must not encourage the liquor business] . . . and the acrid resinous gum is used to destroy the chigoes which attack the naked feet of the negroes. The wood is dur . . . [never mind that].

All right. Here goes. We are surprised to learn that our correspondent is unfamiliar with this delicious yellow fruit with its sweet, aromatic flesh. It is eaten raw or with sugar. The large rough seeds should not be swallowed because they are likely to cause that well known tropical disease known as anthelmintics, but the economical housewife may save them and prepare from them a chigger exterminator.

Does anybody else want to ask about tropical fruit?

If the combined armies and navies of the British Empire, France, Russia, Italy, Japan, Serbia, Rumania, Portugal and Montenegro, with the aid of the munition factories of the United States, are (as they seem to be) unable to arrest Germany and put her in jail for disturbing the peace of the world, what sized police force does this admirable organization of world vigilance, the League to "Enforce" Peace, anticipate will be adequate to perform its duty? And what better will that make it, anyway?

MARCUS ABERDEEN, JR.  
Cambridge, Massachusetts

The League to Enforce Peace is intended as a preventive rather than a cure. Do you suppose that Germany would have entered upon the war if she had known that she would have against her the nine nations named as well as all the neutrals?

The foremost advocate in New York of the "daylight saving" plan is Marcus M. Marks, President of the Borough of Manhattan, who writes to us as follows:

On page 177, Independent of issue October 30, you speak in a favorable strain of Dr. A. H. Mackay's plan for simple efficient world-time.

Did you notice in Dr. Mackay's statement that his plan embraces the "daylight saving" which I am pushing? I quote from your article: "From May 1 to October 1, we could henceforward with comfort adopt the unwritten law of fixing the events one hour earlier."

Thus far, not one serious objection has been raised against our doing nationally what England, Germany, France, Italy, Norway, Sweden and Denmark have already done with great advantage to the people. It is simple and economic. If generally done it will disarrange no engagements, schedules or time-tables. On May 1 before retiring we push our watches and clocks forward an hour. In October when the days have become shorter, we push them back again. Meanwhile we save eyesight, health and gas bills. We work earlier mornings and stop earlier afternoons. The chambers of commerce of the principal cities of the United States have already spoken in favor. I'm glad to see that Dr. Mackay adopts the plan. As a matter of psychology, it will never be undertaken except by nation-wide agreement and action.

MARCUS M. MARKS.  
New York

# JOHN KENDRICK BANGS

Presents THE GENIAL PHILOSOPHER

THE Cynical Sciolist with a lowering countenance, was gazing out of the window at the shivering form of a turkey-red, cotton-whiskered, Santa Claus banging a tambourine under the ears of passers-by to attract their attention to a Salvation Army kettle that stood on the sidewalk before him.

"Here we are again," he growled, "perpetuating that annual fake like a lot of mush-headed pagans that don't know any better."

"Referring to which?" demanded the Genial Philosopher.

"That turkey-red crime on the corner," retorted the Cynical Sciolist. "Santa Claus, indeed—the old snob! Mighty attentive to the rich, but paying as much attention to the poor and needy as a woman of forty pays to her birthday. It's a marvel to me the way the confounded thing persists."

"Yes," said the Genial Philosopher. "That is the marvel of it. Here we are living in an age when the accepted notion is that everything that has been is wrong, that nothing that has been accepted as right is right, and that only the new, lobster-induced isms of the rebellious mind even approximate the truth. That the Santa Claus legend should persist in the face of this bombardment of the citadels of our ancient faiths, and seems not to have yielded a jot to the dynamiting that has been going on at the base of the Rock of Ages for the past decade or two, is the thirty-third wonder of the world; and that is why every time I meet one of these raggedy old Saints on the streets I take off my hat to him, shell out a dime for his kettle, and walk my way rejoicing."

"Great heavens, man," cried the Cynical Sciolist, "you don't mean to tell me that you, a man of sense, and not wholly devoid of reasoning powers, actually believe in Santa Claus?"

"Sure I do," laughed the Genial Philosopher. "Why not? I've seen the old boy at work too often not to believe in him. I can almost say that of all the things I do believe in he is the one best bet. I may find my faith in my Party jarred at times. I may discover that one of my most progressive idols politically has feet of clay. I may believe that the standard of my country wrapt about me is an assurance that I may go whithersoever I please in this world unscathed, and find myself an unavenged luncheon spread on the tables of divers and sundry fishes by a criminal Hun for the purpose of perpetuating his own degenerate dynasty—all these earthquakes shaking my

various faiths to their very foundations may be—have been—within my experience, but not yet from my boyhood days to this has my faith in the good old Saint of the Yuletide even quivered, much less been shaken from its pedestal."

"Tush," sneered the Cynical Sciolist. "Better see an Alienist, old man. You're seeing visions."

"Yes," said the Genial Philosopher. "And what glorious visions they are! Visions of Hope. Visions of Love. Long vistas of glad and lovely things at the end of which is the supreme manifestation of social perfection as represented by the spirit of Brotherhood! Tell me, Brother Sinnick, do you believe that there is such a thing as the United States Steel and Oil Trust?"

"Certainly I do," said the Cynical Sciolist. "I see so many evidences of its existence on every side of me."

"Well, did you ever happen to see the original genius that built up that institution, Mr. Rockernegie?"

"No—but what if I haven't?"

"You believe he exists, don't you?"

"Surely—I've seen his pictures in the papers, playing golf, and doing various other things."

"Well, haven't you seen pictures of Santa Claus also, driving reindeer, and peering down chimneys, and hanging toys on Christmas Trees, and making things generally joyous for other people?"

"Yes, but they were not pictures of the creature himself," said the Cynical Sciolist. "They were pictures of persons impersonating him—mere representatives."

"A H!" said the Genial Philosopher. "There you have it. That's what I am coming to. This is a big world, Brother Sinnick, and most of us who have sizeable enterprizes on hand have to do things thru agents, representatives of one kind or another. Mr. Rockernegie with all his energy could not begin to do a tithe of the work demanded of his vast enterprises himself. He has to work thru Agents. When Mrs. Binks of Speonk wants a can of kerosene she doesn't take a train to New York and dicker with Mr. Rockernegie for it, and require him to bring it to her home on Main street himself. She goes to the bright particular Speonker who has Mr. Rockernegie's canned light on tap, and gets it. So it is with Santa Claus. Years ago the good old chap started his Trust in Good Feeling, to deal in Thoughtfulness, in Courtesy, in Consideration, in Human Sympathy, in Kindliness and Generosity, for the gladdening of innumerable souls in all parts of the world, and year by year that business of Unselfishness has increased until now it is probably the largest enterprise in the world; so large that the

old man has to rely upon his representatives everywhere to meet the demand for his product. His is still the Master Mind behind it all, and the product in Loving Kindness, Cheer, Brotherly Love, Bountiful Generosity, Thoughtfulness of those in sorrow and poverty—all these things he holds ready for distribution, on demand. Loving Kindness is within immediate reach of every human soul that wishes to become the official Distributing Agent of Santa Claus. Every penny that is dropt into that iron pot you object to is a measure of what somebody feels he can do for that particular activity of the SANTA CLAUS BROTHERLY LOVE TRUST. If you find him thinking of the unhappy rich, you should rejoice that in this day and generation when everybody is slamming the rich there is some Agency in the world to give them a touch of comfort and sympathy. If you find that there are poor to whom his gifts do not come, don't blame him—blame his Agents, or better still, shoulder some of the responsibility yourself. Constitute yourself one of his representatives, and go out yourself and cover the neglected spots. Growling at him, and criticizing him, and calling him an old snob, doesn't help things a bit; and considering the flood of inspiration that the thought of him, and what he stands for, sends coursing thru every decent human heart in these Yuletide days, it is unjust—yes, more than unjust. It is disloyal to the higher inspiration of Love and Sacrifice that has made him what he truly is. I have seen the very thought of his personality bring a twinkle into eyes suffused with tears. I have seen hardened, selfish, miserly souls redeemed by the spur of his example; and wherever in this world I see something of the spirit of Unselfish Generosity illuminating a dark place, I know that he is there!"

THE Genial Philosopher gazed wistfully out of the window at the shivering Saint for a moment, and then fumbled in his pocket.

"Here's a little rime I tossed off a short time ago," he said. "Maybe it'll fit your case, Brother Sinnick."

Now don't you think that Santa Claus  
His work would better do  
If you would just a minute pause  
And help the old boy thru?

"It's just a little hint, old man, but—"

"Big or little, it's enough for me," cried the Cynical Sciolist, his eyes alight. "I—I guess maybe—in fact, I know you're right."

And he went out upon the street and threw a five dollar bill into the Kettle, and then handing Santa Claus a cigar he wished him a Merry Christmas.
